THIRTIETH ANNUAL REPORT

UPON THE

ASYLUMS FOR INSANE AND IDIOTIC.

The prominent features of interest connected with the operations of the Provincial Asylums for the Insane and Idiots for the past year will be found in the tables which follow, and which have been compiled from the returns of the seven institutions which are wholly maintained from the revenues of the Province.

As the increases or decreases, as shown in tabulated form, are, no doubt, the surest means of estimating the progress and determining the present position of the work in caring for the insane, the first point of interest in this regard is the comparative increase of admissions for the year ending 30th September last. The number admitted during the previous year ending September 30th, 1896, was 763, whereas, for the year under report there has been 905 admitted, or an increase of 142. For the past five years the admissions have averaged 793, or 112 per annum less than the year just closed. In two years, however, during the past decade the admissions have exceeded those of the past year, namely, during 1891 and 1895, when there were 928 and 968 received in the years named respectively.

The increased admissions have resulted in a marked increase of the number of patients in daily residence for the past year. During 1896 there was an average of 4,116 lunatics, and in 1897 4,254, or an increase of 138.

The total number discharged as recovered was 223, equal to 24.97 per cent. upon the admissions, and although this is not so large a number as has been regarded as the average of some former years, neither do these figures exhibit so small a percentage as has been shown to have resulted from asylum treatment during some of the previous years. It is evident that on account of the class and condition of patients admitted from year to year there must be considerable disparity in the annual returns in regard to recoveries, and that fluctuations may be anticipated in consequence of the varied condition of the asylum population produced by, or resulting from many different causes. In evidence of this the condition of patients admitted after a lengthened period before asylum treatment or care was provided is certainly not calculated to increase the number of

recoveries. And of late a large proportion of the lunatics admitted have been mentally weak for years previous to their admission. During the past year seventy-four have been admitted who were insane from five to ten years before, and 152 or 164-5 per cent. of the total admissions had been suffering for periods of from ten to twenty years and upwards before their admission.

Previous to 1880 no statistical record was made showing the length of time which lapsed before patients who were insane were sent to the institutions, but since that date, and up to the close of 1896, the records show that there were 1,851 admitted after periods ranging from five to twenty years during which they had been insane. This number is equal to 17 1-2 per cent. of the total admissions during that period, and when compared with the past year it is evident that there is no decrease in the number of this class of outlying patients who have been admitted. And to add to the above there were the admissions of 353 whose term of insanity before admission was not definitely ascertained from the histories furnished: but there is no doubt but that a very large proportion of this number also had been eared for by friends for a length of time before they were placed under institution care, and whose cases might rightly be designated as chronic at the time of their admission.

The foregoing remarks in respect to the unfavorable results following a lengthened exclusion from asylum care will largely apply to the returns showing the proportion of persons admitted who have reached an advanced age.

The statistics since 1888 furnish very reliable data on this point. During the past year 138 have been admitted who were known to have been between the ages of sixty and ninety years, or a number equal to 15 1-4 per cent. of the total admissions. And for the previous eight years the records show that, including forty-eight about whose age there was doubt, a total of 945 were received in the several institutions, equal to fifteen per cent. of the total admissions for the previous eight years.

The death rate of the asylum population, although recording a somewhat increased number and percentage above the previous year, it is by no means abnormally large. This is verified by the records showing that for the past twenty years the rate has been exceeded during six of the years referred to. The average rate, it may be noted, for the past year was 6.13 per cent., and for the previous year 5.47 per cent., and for the full term of twenty years it has been at the rate of 5.72 per cent. upon the number resident.

ASYLUM MAINTENANCE.

The reduction in maintenance expenditure for the past year is comparatively larger than for a number of years past. This is seen from a comparison of the per capita cost. This latter for a period of five years (1892 to 1896 inclusive) shows an average expenditure of \$135.45, while for the present year it is xii.

\$126.28, or a difference of \$9.17 per patient. This reduction calculated on the average daily population for 1897 amounts to a saving of \$38,809.18. This saving has been effected largely as the result of continued efforts to limit the outlay to the smallest sums with which efficiency could be maintained; and to the use of internal appliances in the consumption of fuel and light and other internal fittings designed to guarantee the greatest service for the least expenditure.

It is gratifying to note that notwithstanding the adverse conditions of having two new institutions only partly filled, but necessarily having an organization and official staff, while in that condition, not only has the per capita cost been reduced, but as will appear from the following table the cost of maintenance in several particulars has been considerably less during 1897 than for an average of the previous five years.

Aver	rage for 1892-189	5 year₃, 96.	189	7.	Reduction.		
Butchers' meat, fish, etc\$6	55,467	36	\$61,202	32	4,264	54

Fuel 6	4,415	35	60,513	37	3,901	98	
Farm, feed, fodder, etc 1	- /		13,036	14	6,637	06	
Repairs and alterations 2	20,005	99	17,670	28	$2,\!335$	71	
Miscellaneous	9,819	65	8,488	85	1,330	80	

The principal reason for these reductions may be found in the fact that upon the opening of new institutions increased expenditures are unavoidable at first, which disappear upon the institution becoming thoroughly organized and equipped. This has been the case both at Mimico asylum and at Brockville, and as the latter assumes a more completed and thoroughly equipped condition, the rate of maintenance will doubtless continue to decrease. Time, however, is not the only factor in controlling the maintenance of an asylum. System and method are absolutely necessary in the internal management and supervision of the insane, if the cost to the State is to be kept within reasonable limits. This, I am glad to be able to report, has been secured by the proper observance of rules and regulations adopted as the result of previous experience in the satisfactory working of the institutions.

The various improvements at several of the institutions, completed, or nearly so, during the past year, will be of great service in the future work of those connected therewith. The new Infirmary at Hamilton is about ready for occupation, and the new store-house and entertainment hall at Mimico is in a similar condition. These buildings were a necessity in each case for the different purposes of the asylums, and when fully equipped will be a great accession to the complete appointments at these places.

In the reports of the medical superintendents which follow much of the operative and routine work of each asylum will be found to be given in detail, 3⁺ A.

and it is scarcely necessary for me to refer to them at further length. In each case they deserve careful perusal.

The season just closed has been comparatively uneventful, and considering the object for which the institutions are established, and the characteristics of their inmates, this is of all other issues one of the results most to be desired.

ASYLUMS FOR THE INSANE AND IDIOTIC.

For the greater convenience of reference, the tables containing statistics on all points concerning the operations of the Asylums, are placed at the beginning of this report. The following is a list of these tables:—

- Table No. 1.—Shews the movements of the entire Asylum population during the year ending 30th September, 1897.
- Table No. 2.—Shews the general movement and result of treatment of lunatics in the Asylums of the Province during each of the twenty-one years from the 1st October, 1876, to the 30th September, 1897.
- Table No. 3.—Shews the Counties and places from which patients were admitted to the Asylums and the Asylums they were assigned to.
- Table No. 4.—Shews the Counties and Districts from which the entire number of patients admitted to the Asylums have been received, including the admissions of the present year: also the Counties and Districts from which the patients remaining in residence the 30th September, 1897, were originally admitted.
- Table No. 5.—Shews the length of time lunatics received into the Asylums during the year had been insane prior to admission.
- Table No. 6.—Shews the length of residence of patients remaining in the Asylums on the 30th September, 1897.
- Table No. 7.—Shews the periods that patients were under treatment who were discharged during the year as being cured.
- Table No. 8.—Shews the periods that patients were under treatment who were discharged as improved.
- Table No. 9.—Shews the periods that patients were under treatment who were discharged during the year unimproved.
- Table No. 10.—Shews the length of residence of patients who died during the year.
- Table No. 11.—Shews the causes of death of those who died during the year.
- Table No. 12.—Shews trades, callings and occupations of patients admitted into the Asylums during the year, and also of the total number admitted.
- Table No. 13.—Shews in detail the expenditure of the various Asylums during the year ending on 30th September, 1897.
- Table No. 14.—Shewing the expenditure in each Asylum under the various headings of the estimates and the annual cost per patient under such heading.
- Table No. 15.—Shews the supplies for which tenders were invited and the prices paid for the same.
- Table No. 16.—Shews the number of officers and employees in each and all of the Asylums classified according to the duties performed.
- Table No. 17.—Shews the nature of employment, the number of patients employed, the number of days' work done by patients, and the average work in days per patient during the year.
- Table No. 18.—Shews in quinquennial periods the ages of those persons admitted to the Asylums (excluding transfer) during the year ending 30th September, 1897.
- Table No. 19.—Shews in quinquennial periods the ages of those persons discharged from the Asylums as cured during the year ending 30th September, 1897.
- Table No. 20.—Shews in quinquennial periods the ages of those persons who died in the Asylums during the year ending 30th September, 1897.

TO THE THIRTIETH ANNUAL REPORT UPON THE ASYLUMS FOR THE INSANE AND IDIOTIC, CONTAINING THE ANNUAL REPORTS OF THE MEDICAL SUPERINTENDENTS OF THE ASYLUMS IN TORONTO, LONDON, KINGSTON, HAMILTON, MIMICO, BROCKVILLE AND ORILLIA.

ANNUAL REPORT OF THE MEDICAL SUPERINTENDENT OF THE ASYLUM FOR THE INSANE, TORONTO, SEPTEMBER 30th, 1897.

To Robert Christie, Esq., Inspector of Public Charities, Toronto, Ont.

SIR,—I herewith have the honor to submit to you the fifty-seventh annual Report of the operations of the Asylum for the Insane. Toronto, for the year ending the 30th September, 1897.

It will be noticed by the annual tables submitted that there were 197 patients admitted during the preceeding twelve months. Of that number 62 were males and 76 were females; of that number 64 were discharged as recovered and 61 died.

The recoveries have been less than they have been for some years past. This is largely due to the unfavorable and chronic condition of so many of the patients who have been admitted. The acute and curable cases have been comparatively few. The proportion of recoveries on admissions was 30.8%.

The record of the past six years shows how much the proportion of recoveries vary and also is an index of the quality of the persons admitted.

1892 in admissions	.41.
1893 in admissions:	,41.4
1894 in admissions	.47.2
1895 in admissions	.33 4
1896 in admissions	.37.7
1897 in admissions	,30.8

DEATHS.

Sixty-one died during the year, the percentage is 6.8 on the total population. The average death rate in Asylums is 7½, but the above rate is somewhat above that of last year which was only 4.3%.

The year has shown a large mortality among the aged, which the following list will show.

A. C	iged	1.76 s	ears.	1	G. L

There has been a tendency of late years to send aged people to the asylum who are harmless and could be kept at home by friends. Since the comforts and care of asylum life have become better known it is found convenient by not a few relatives to have many certified to as insane who possess only the childish-

ness, and possibly the loss of memory incident to advanced years. It is forgotten that senile decay is not insanity, but is a natural condition which would overtake all of us were our lives extended beyond the usual limit accorded to humanity. It is not a diseased state but a natural decadence along lines of vital failure and exhaustion according to laws implanted in all living things. We are often blamed for refusing to accept such, and in this way prevent as far as possible an asylum being merely a home for incurables, for many whose relatives are well able to look after such harmless citizens at home in their declining years.

It is satisfactory to know that there are many exceptions to this heartlessness and want of sympathy and affection.

This evil could be checked to a large extent were medical men to distinguish between the two conditions which have been indicated and refuse to certify as insanity what is only the dotage of old age.

The mental failure may begin at any time, even as early as three score years, but usually not before 70 years of age. Many with a robust inheritance may not shew it until 80 years of age or over and some have wonderful capacity of mind in the nineties. The latter are phenomenal and are exceptions to the general rule.

Medical men are apt to forget that senile dementia is natural decay. The loss of memory especially for recent events, the consequent delusions, the childishness, the lack of usual and normal discretion and judgment, the vacilation and violence of temper over trivial things, the carelessness and want of shame in respect to clothing and nakedness and inane muttering shew that all these and such like conditions are simply the mental deprivation of old age and not disease. The tenement house is affecting the tenant as it is being taken down by piecemeal and the tendency is "to the earth earthy."

It is sometimes disgraceful to see how many so-called Christians look upon parents in such a helpless condition as incumbrances, and are prepared to commit these harmless dements to an asylum simply to get rid of them. They forget that a like fate may follow many such through their children when old age grows on apace.

Wants.

It was hoped that during the past year we would be permitted to extend our grounds to King Street as our present enclosure is altogether inadequate to give sufficient airing ground for our patients. We only ask for the material and the labour of our mason as all the work could be done by our patients. A few years ago when 26 acres of land were taken from our grounds we not only took down the old brick and stone walls, but we built two new walls at both ends where exposed to the public, largely by patients' labour. These walls were over 600 yards in length and averaged from 12 to 15 feet in height; the cost was comparatively small as the old bricks and stone were again utilized in the new walls. The same method could be adopted again and with like results. The need is evident and the land is asylum property and cannot be used except by ourselves. Our asylum buildings overlook the ground.

It is impossible to understand what reasonable objection can be made to this proposal. As we have no farm land the working patients would gladly labour at the undertaking, rather than lounge about the wards in weariness and idleness. It is evident that this Institution with its present accommodation cannot provide for all the insane in its district. The city of Toronto and the County of York contain nearly a quarter of a million of people and on an average supply annually from 150 to 200 insane. The only room which can be made is through death or by discharges. The sum total of these does not make the required vacancies. If these insane are to be provided for here, than more buildings are needed. Additions could be made to our cottages without much expense or were a detached hospital made with accommodation for say fifty patients, and our present infirmaries used for chronic patients, then we could easily add 100 more patients to our population. This additional room would do for at least several years to come. At any rate someting must be done to relieve the congestion at present existing in the Toronto Asylum district.

THE RELATION OF THE PUBLIC TO THE INSANE.

The first point is in respect to the heredity. The bequeathment of deterioration in body and mind is seen on every hand. We see its malign influence in idiocy, imbecility, insanity and crime. "Our fathers have sinned and we bear their iniquities." The inexorable laws of nature have no pity for saint or sinner when they are violated. Were the penalty confined to the actual transgressor, we might not extend much sympathy to him. Public opinion would be apt to say "It serves him right."

Unfortunately the mischief does not end with the transgressor, but is transmitted to and through generations of descendants who have been born into the world without their consent, and who are handicapped through life by a tendency to reproduce the many physical and mental ills to which they are thus heir, because of the acts of their ancestors. This legacy of untold misery is strikingly seen in insanity. At least $60^{\circ}/_{\circ}$ of the insane are fore-doomed by heredity. Much of this tendency could be avoided were there some way to prevent unsuitable marriages. Law would be considered oppressive were it to interfere, and the cry of private and personal rights being infringed upon would make any statute inoperative. The time will come when the tax-payer will cry out for redresswhen the increase of taxation shall reach such a stage of magnitude as to be very burdensome because of the necessity to support in institutions or otherwise the mighty army of diseased and defective citizens who have been begotten in sin and enfeeblement, and in after years are thrown upon the charity of the robust public by the thousands and tens of thousands. The Christian public do nobly in the various charities to ameliorate the condition of all such who are objects of pity. Over a quarter of a million of these dependants are provided for in the North American continent, not to speak of Christendom as a whole.

It is passing strange what little attention is paid to this subject by the press, pulpit and legislative bodies. Health boards search after all insanitary conditions and communicable causes with commendable diligence, but this canker worm which is eating into the very vitals of our population, commands little attention and the few who know whereof they affirm are virtually "voices crying in the wilderness."

It is the impression of the writer, that in time, radical measures must be adopted by the state to stem this influx of degeneracy for which it has to pay so dearly, and because of which so many suffer. In the meantime, the various state and provincial authorities would do much good were they to instruct the health boards to issue, with other literature, a chapter or two on the bad effects of unsuitable marriages, especially in relation to the children of such would be parents.

Many a person would not enter into such a relation did he or she know the probable effects on progeny.

Enlightenment in this direction would do much good. This is not a matter of which it can be said,

"Ignorance is bliss, "Tis folly to be wise."

The second remark I wish to make is in respect to asylum discharges of the poor and friendless. All asylum officers know how they are put to their wits end to know in what way to dispose of these recovered patients. They cannot be turned out at the gate to look after themselves, especially if young females, who would often fall an easy prey to the first scoundrel who would show them kindness, in order to accomplish their ruin. The aged cannot be turned adrift to look out for themselves when they are physically unable to do a good day's work, however mentally strong they might be.

Many have relations who are not friends and who heartlessly refuse to have anything to do with the convalescent insane. Few charitable institutions will take in those who have been thus afflicted. It is difficult for many such to procure employment. We all know how diffident the public are to take these into their shops or houses, although pronounced by Medical Officers of asylums to be industrious and harmless.

Not only so, but the convalescents say they are watched and gazed at, and criticized in society. They are often not trusted, and treated as if they were expected to again break out into mania or do some overt act against the wellbeing of their relatives or neighbors. Such treatment irritates the mentally well and often causes a relapse which might not take place were such treated kindly and as rational beings. The question arises how are these friendless people to be provided for? Should each municipality provide for its own and endeavor to procure homes and employment for them until such time as each may be able to earn an independent living? Should each province still keep oversight of those that have no homes to go to and no one to take an interest in them? Should such farm them out in selected houses and pay to families small sums to provide food and shelter for them until they can find places in which they can earn their own living? Charitable organizations watch for the discharge of the criminal and the fallen when the period of their imprisonment terminates, and endeavor to reform them. Orphans are housed, educated and clothed by the kindness which is ever present among a Christian people. This is well. At the same time no class of our dependents are more worthy of our pity and consideration than those "more unfortunates" who have come out of the cloud, gloom and wierdness of dethroned reason in which is misfortune but no crime. Verily, these friendless ones have been overlooked except by Medical Officers in Hospitals for the Insane, who take almost a parental interest in all who have been under their care and have gone out to battle again in the maelstrom of human strife for an honest subsistence.

Will the Philanthrophist tell us what is best to be done with this class?

There is another class of weaklings whose mental disaster can be traced to mental overpressure at school. We all know how much brain work is needed now-a-days from children to keep apace with the demands of parents and teachers. In this province some relief has been given during the last few years in shorter

school hours for the very young, and by the introduction of the kindergarten system in towns and cities which combines pleasure with teaching. So far, so good, but too many subjects are on the list of studies for the young. They are supposed to be at sixteen waking encyclopedias and are the pride of parents and teachers.

The result is that many feel the effects in after life. The susceptible and tender brain is on the rack, and this strain is at a time when only moderate exercise is healthy to this impressive organ. The brain must, like the rest of the body in its earlier days, gather tone, fibre, and capacity for the great struggle of life. The young are not permitted to do hard manual work because of the tenderness of the body, until maturity is almost reached, but the most important organ of our physical system is urged onward, to the utmost extent of its powers, from babyhood upwards.

The weary head is filled with all kinds of knowledge which in former times was wisely judged to belong to the colleges.

The robust go through the ordeal unscathed, but to many it means nervousness, lassitude, periodic headaches, loss of appetite, troubled sleep, a lax, prostrated physical and mental system. A tendency to, and an invasion of, insanity too often ends the chapter of blunders, especially if a hereditary predisposition exists

The last point I wish to touch upon is the successful importation of tramps, defectives and insane, to this continent, from all parts of the world, but especially from Europe. The seaport cities of the United States are guarded to some extent against pauper immigration, but not against the semi-dements and the insane in their remissions, when they are in a condition to temporarily pass muster at ports of entry. As a consequence I find, on enquiring, that all the hospitals for the insane have a larger proportion of insane per cent. than is found among the native population. This may be accounted for to some extent because of the low standard of mentality of a large proportion of the class who is dumped upon our shores.

Such a condition, under new environments and under new conditions of existence, leads to mental stress and insanity. At the same time, apart from this fact, there are no doubt parochial boards, other municipal bodies, and even relatives, who find it pays to send these classes of defectives across the sea, and thus rid themselves of these burdens forever. The cost of a steamer steerage ticket is little to a lifetime maintenance in a poor-house at home.

Strange to say the Canadian seaports are not guarded in those respects, and as a result, our hospitality is abused in the invasion of these classes, some of whom, doubtless, gravitate to the United States along our extended border.

LAW AND LUNACY.

One of the most objectionable methods which law imposes is that of serving legal papers upon the insane. It is taken for granted that the victim of mental disorder is irresponsible, and not capable of transacting any kind of business in a reasonable way. Such being the case, it is evidently absurd to serve on such any document in which many of the insane are not capable of taking any interest. It would look as reasonable to serve papers on a child in the cradle. Not only

so, but there is a class of patients who have delusions of persecution, and of being robbed and cheated: to this class any such service only intensifies the morbid fancies, and does personal harm in contributing to such a mind proof positive of the truthfulness of these unreal fancies. The same objection is true of the insane melancholic who supposes himself ruined, and that he and his are coming to starvation and beggary. Such legal papers are to him undoubted evidence of impending disaster. This unwise method helps to retard recovery. Service on the chief officer in charge of the insane should be sufficient, and should constitute a valid service.

The Practice and Procedure of the Supreme Court of Judicature has the following rule, number 263:—

"Where a lunatic, or where a person of unsound mind not so found by inquisition or judicial declaration, is a defendant to the action, service on the committee of the lunatic, or on the person with whom the person of unsound mind resides, or under whose care he or she is, shall, unless the Court or a Judge otherwise orders, be deemed good service on such a defendant."

It was supposed this rule would meet the difficulty. It is evident such is not the case, as this only applies to lunatics in charge of friends. All lunatics in asylums are found to be so by "Inquisition or Judicial declaration," hence this rule does not apply to them

Many civilized countries permit legal service to be made on all, having the insane in care or custody, and why there should be an exception made against those who are found to be of unsound mind by inquisition or judicial declaration, it is difficult to understand. Surely, if the insane at large are thus exempt, those declared by law to be so should be free from such an uncalled-for procedure, that is, if the well-being of these afflicted people is worthy of consideration.

Admissions.

Chapter 245, section 7, reads as follows:—

"No person shall be admitted into any of the said asylums as a lunatic (except upon an order of the Lieutenant-Governor) without the certificates (Form A.) of two medical practitioners, each attested by the signatures of two subscribing witnesses, and bearing date within three months of the time of such admission." R. S. O. 1877, ch. 220, sec. 8; 45 Vic., ch. 32, sec. 3.

This section means that a medical certificate is valid for three months after execution, without any second examination being made during that period.

For example: J. D. is examined and pronounced insane on the 1st of October, 1897, which is valid on the 31st of December, 1897. He can be arrested and detained on the last day of the year as insane, although the two certificates may be three months old.

A large number of acute cases recover inside of three months from the invasion of the disease, yet in law such are declared insane. It is often the case that patients have recovered inside of that time, and yet are committed as insane, to be discharged in a few days as sane persons by the Medical Officer of an institution. At the same time the disagreeable fact of having been committed as insane remains with the individual. When certificates are executed declaring insanity,

they should be acted upon within ten days of such a period, and after that time should be declared of no effect if no action is taken. The present law is unfair to a citizen thus afflicted, and often leads to an injustice, intentional or otherwise.

In every medical certificate there are two dates: The first is, when the examination of a patient has taken place; the second is, when the document is executed. The three months during which the certificate is valid, dates from the signing and the witnessing and not from the examination.

It will be seen then that J. D. might be examined months before the signing and witnessing of the paper and then three months might be added to that time, and so legally a year or more might elapse between the examination and the committal. This is not a mere supposition as such a condition of things has more than once happened in this province and chief officers of asylums have refused admitting patients thus legally certified because of the time which has elapsed between the examination and the presentation for admission. It is evident then, that the examination and the execution should bear the same date. Some day the Statute in force may be acted upon and its injustice to an individual made manifest by an example which will command general attention. It is the copy of an old law and evidently needs rectification if the public are to be protected from what may end in a very great wrong through a defective and objectional statute being taken advantage of for sinister, purposes.

SURGICAL.

Our thanks are given to the medical staff of both the Toronto General Hospital and St. Michael's Hospital for their kindness and skill in giving surgical assistance to us whenever it was required. It would be bad taste in us to go into details in an official report. Suffice it to say, that the various operations were successful and there were no deaths to record, although several of the operations were of a most difficult and delicate nature. There was no change mentally in those requiring surgical treatment, although their bodily comfort was thereby enhanced.

WANTS.

A good deal of the work in the erection of a new hospital could be done by the labor of patients. A substantial brick building would meet our wants. This erection could not only be occupied by the sick, but part of it could be set apart for acute and curable cases.

A spray bath on the men's side of the house is very much needed.

Flour house is wanted.

Asphalt pavement from Asylum to Queen street.

The spray bath on the women's side of the house needs re-constructing.

A great deal of sidewalk will need to be laid during next year. Much of it is now rotten and dangerous to walk on.

It would be a great convenience to us to have electric power to use in the engineer's shop, to saw wood and to cut fodder. Five horse power would be sufficient.

A new range is needed in the kitchen. The present one has been in use nearly twenty years and is worn out.

One of the wooden coal houses is in a delapitated state and needs re-constructing or a new erection.

A decent entrance is badly needed. The present one is an eye-sore, especially to visitors who are often impressed unfavorably of a whole institution by its approach and main entrance.

Pathology.

It would be worthy of consideration if a sum were set apart for pathological research. The material is at hand. Medical officers cannot spare the time necessary from their official duties to devote to investigation in this kind of work. The rough post mortems held are of little or no importance, especially if investigation is confined to what the eye alone can find out. The unaided vision sees little and knows little except of a very general nature.

In this day of advanced chemical physiology with the aid of the microscope and micro-photography, much good work has been done in these asylums for the insane, in which one of the medical staff devotes all his time to pathological research, and who has been trained in this kind of work. We have not reached that stage so far, although something has been done along that line of research in an amateurish way.

We have excellent professors of pathology in two of the medical schools in this city. Were the material divided between them we could be able to compare the insane life history of each individual with the footprints of disease found after death. Interesting and useful records would be the result.

LIST OF CONCERTS GIVEN AT THE ASYLUM, TORONTO—SEASON 1896-'97.

1.	October	14,	1896	Army and Navy Veterans Band.
2.		20,	1896	James Baylis and friends.

23.	44	18, 1897 Mr. and Mrs. Cleworth and friends.
24.	"	23, 1897 D. M. Young and friends.
25.		24, 1897 Madame Stuttaford and friends.
26.		25, 1897 Rev. John Pearson and friends.
-27.	March	1, 1897 R. Taylor and friends.
28.	**	4, 1897 Calvert Currier.
29.	4.6	9, 1897 John Gowanlock and friends.
30.		10, 1897 James B. Baxter and friends.
31.	••	16, 1897 James Baylis and friends.
32.		25, 1897 Caledonian Choir.
33.	4.6	26, 1897 48th Highlanders' Band.
34.	April	6, 1897 James Baylis and friends.
35.		27, 1897 Mr. Titus and friends.

It will be seen from the above list of entertainments that our friends in the city are not few, and for many long years they have not forgotten us. A number of them have given us concerts and dramatic amusements every year for 22 years. The military bands also deserve thanks in adding in this way to the pleasure of our patients. No one but those in an institution of this kind can fully appreciate what sunny glints these evenings are to all who attend. The officers, the musical attendant and a number of the patients gave two concerts and readings, which our audience enjoyed very much, as all the performers were personally known to all.

We had several pic-nics in the grounds and races with prizes under the supervision of our steward which pleased all.

The visit to the exhibition of over 200 patients, the sleigh rides in winter, the croquet and lawn tennis games, etc., have enabled a large number to pleasantly pass the time.

About 4,000 volumes of our library are taken out and read by patients during the year. The *Globe* and *Telegram* furnish us with their exchanges twice a week, which are distributed in the wards.

Few changes have taken place among our employees during the year.

Although friction will occasionally occur where so many live together, yet we have not had any of a serious nature. On the whole the desire seemed to be to do conscientious work and not be ornamental rather than useful. It is a great comfort for a chief officer to know that he is having faithful work performed, as

it is on the other hand causes him great anxiety to feel that only eye service is being rendered. To have those in this great organization who can be trusted means good administration. The responsible head will fail, however capable he may be unless this condition of a sense of responsibility is found to exist. He must trust everyone more or less in the work. If this confidence does not exist an asylum is no place for such drones. Constant vigilance must be the motto of everyone of us.

The chief medical officer's cares oppress him night and day and every hour of the year. He has no office hours and virtually no Sundays.

His position is that which was said of a noted bishop, "He is incessantly harassed with a crowd of petty duties, which leave no mark and win no credit."

This report would not be satisfactory to myself did it not contain an expression of thanks to yourself for your kindly advice and readiness to advance any efforts made to keep abreast of the difficulties in the care and medical treatment of the unfortunates committed to our care, by a confiding public.

I have the honor to be, Sir,

Your obedient servant,

DANIEL CLARK, Medical Superintendent.

ANNUAL STATISTICAL REPORT

Of the operations of the Asylum for Insane, Toronto, for the year ending 30th September, 1897.

ANNUAL REPORT OF THE MEDICAL SUPERINTENDENT OF THE ASYLUM FOR THE INSANE, LONDON, ONTARIO.

OCTOBER 1st., 1897.

To R. Christie, Esq., Inspector of Asylums, Toronto. Ont.

SIR,—I have the honor to transmit to you herewith the Twenty-sixth Annual Report of this Asylum.

There were in residence at this Asylum on the first day of October, 1896, 1,014 patients, of whom 478 were men and 536 were women. In the course of the twelve months that have since elapsed, there have been admitted into the Asylum 145 patients, of whom 94 were men and 51 women, making the total number of patients under treatment during the year 1.159, 572 men and 587 women.

Of these patients 48 have been discharged, 23 men and 25 women; 49 have died, 26 men and 23 women; 5 have been written off cloped, 4 men and 1 woman; and 41 men have been transferred to other asylums; leaving in residence at present 1,016 patients, 478 men and 538 women.

Of the 48 patients who have been discharged, 36—18 men and 18 women—were discharged recovered: 11—4 men and 7 women—were discharged improved and one, a man, was discharged at the request of his friends unimproved.

The number of patients discharged recovered and improved was 47 or 32.41 per cent. of the admissions.

The recovery rate from the opening of the Asylum down to date, including patients discharged improved, has been 39.60 per cent. of the admissions.

The total number of patients under treatment during the year was 1,159, and the number of deaths 49, so that the death rate for the year was 4.22 per cent.

The deaths were all from natural and unpreventable causes.

The average annual death rate from the opening of the Asylum down to the present time has been 4.54 per cent.

The total number of patients admitted into this Asylum since it was opened 20th November, 1870, is 4,131—2,218 men and 1,913 women. Of these:

There have been discharged 1,559—808 men and 751 women.

There have died 1,132-656 men and 476 women.

There have been written off eloped 80-71 men and 9 women.

There have been transferred to other Asylums 344—205 men and 139 women.

Leaving in residence to-day 1,016 patients—478 men 538 women.

Of the forty-one patients transferred during the year just closed: 1 was transferred to Toronto Asylum, 15th December, 1896: 20 to Hamilton Asylum, 9th February, 1897; and 20 to Brockville Asylum, 15th June, 1897

SURGERY OF THE YEAR.

I.—GYNECOLOGICAL.

A prevailing idea exists among the laity regarding the treatment of the insane, that asylum physicians have some special medicaments known only to themselves, which are requisite in treating diseases of the mind. It is needless to say that this assumption is scarcely correct, although it is perfectly true that they have their own methods of meeting and attempting to solve the complex problems presented to them in their patients.

Even if the brain is the prime seat of mental derangement, it is only an integral part of the machinery that enters into the make up of the complex human being. The interdependence of the brain upon the rest of the body is shown by the mental disquietude and unrest following depreciation of bodily health brought about by lesions of various organs other than itself. No panacea has yet been found to insure return to mental health by acting upon the brain alone, while ignoring the rest of the anatomical structure.

It comes to this, that the treatment of diseases of the mind resolves itself into an endeavor to place the whole physical system on the best possible basis of health and efficiency. If this can be accomplished, and the mental condition fails to respond, the case is thereby shown to be practically hopeless, and inevitably drifts into the ranks of "Chronic Insanity."

To bring the physique to the highest attainable point of perfection as early as possible, is the desideratum of all alienists. This desirable goal is only reached by the adoption of the best dietetic and hygienic methods, in addition to drawing upon the resources of medical science and surgical art to their full limit, as the exigencies of each and every case require.

There is, as all physicians know, a class of diseased conditions, such as new growths, malignant or benign, malposition of certain organs, displacement of normal parts, derangement of natural functions, and diseases which are the sequence of accidents, that are amenable to relief only by surgical interference.

The immense strides recently made towards perfection in surgical procedure, make more and more possible and practicable operation for the removal of diseased tissues, with ever increasing immunity from danger, as will be shown by the following table.

The benefit to the patient's health and bodily comfort, resulting from the removal of these sources of exhaustion, worry, pain, and misery, is unquestionable. In proof of this all the cases outlined below improved to a greater or lesser extent. Even if physical gain had been the finale of the treatment of these exiles of humanity, this much at least has been accomplished, their former miserable existence has been immensely bettered.

But as has been already pointed out, the improvement in physical well-being is often paralleled by mental recovery. This desirable goal has been reached in many of these cases by surgical as in others, by medical treatment.

The history of the forty-six cases, representing the gynecological work for the year just expired, as hereto annexed, will show that all these patients were absolutely beyond the reach of medical treatment. The immediate physical recovery in every one of them succeeding the operation, was manifestly brought about only by strict attention to aseptic technique and surgical detail in the operation itself. Some of these would have died were it not for timely interference in arresting the devastating march of disease. As it is, they now have a chance to pull up in bodily health, with a possibility of subsequent return to a normal mental state.

An analysis of the post-operative history of the ninety gynecological cases done since the beginning of this work three years ago, strongly emphazises the effect of time in their recovery, when this occurs. The sequence of events seems to follow a species of evolution through which the patient (often very slowly) passes from her condition of mania or melancholia to improved mental health, and from that (still very slowly) to recovery.

This interesting fact is brought out very clearly by the percentages of actual improvements and recoveries in the successive years since the initiation of the work. For instance, in all the women operated on during the first year, the percentage of recoveries has been steadily increasing, until down to the present time fifty-two per cent. of them have recovered mentally, not including sixteen per cent. besides who have improved.

In the cases operated on during the second annual period there have recovered, down to date, thirty-two per cent, over and above thirty-two per cent, more who have improved.

While in the third annual period, that is in the year just closed, there have recovered only twenty-six per cent. of the patients operated upon, exclusive of thirty-nine per cent. who have improved.

This analysis is of great value as pointing out the important fact that, with the efflux of time the percentage of recoveries is constantly being added to from those who are gradually mending as a result of the operation.

To sum up now the results attained in the whole ninety cases operated upon from the beginning: Eight of these patients are to-day dead—one died the third day following the operation from exhaustion: one on the twelfth day after the operation from pneumonia, which set in on the tenth day: one died from hemorrhage, self induced, she tore away the ligatures: the other five died from causes entirely unconnected with the operation. The eighty-two patients who are still living are all permanently relieved of the several diseases for which the operation was performed, and are all in improved physical health.

Now as to the results upon the mental condition of the several patients: Of the eighty-two left alive thirty are well, twenty-nine others have improved mentally, and so far twenty-three are unchanged. It is right to say, however, that of this twenty-three, several have only been operated upon within the last few weeks, and so far have had no chance to improve.

If none of the ninety patients had been operated upon, it is my opinion that comparatively few of them would have improved physically, and that very few would have either recovered or improved mentally, as compared with the number that have actually improved and recovered.

Operation.	Physical result.	Mental result.	Remarks.
Curettage divulsion tra- chellorrhaphy. Alexan- der's operation.	τ er ed	Recovered	Discharged Feb. 8th, 1897, after being on probation since Nov. 25th, 1896 States she is as well mentally as ever she was in her life, she has better health now than she ever had.
Curettage divulsion and coeliotomy with ventral fixation of uterus.	Recovered	Improved greatly	Went home on probation Dec. 16th, 1896. Discharged June 28th, 1897. Letter from husband Mar. 29th, 1897, states "she is greatly improved since I brought her home, and I do not think it wil. be necessary to have her return."
Curettage divulsion and amputation of cervix uteri, cauterization of hemorrhoids.	Recovered	Improved	Has now very good bodily health, and works daily in sewing room.
Curettage, divulsion and amputation of cervix; hemorrhoids removed by Allingham's operation.	Recovered	Improved	Is much quieter than formerly.
Curettage and divulsion.	Recovered	Recovered	Is very well now, and is sent home on probation.
Curettage, divilsion, tra- chelorrhaphy and Alex- ander's operation.	Recovered	Improved	Much quieter than formerly and does a little work now.
Curettage and coeliotomy and removal of both ova- ries and tubes.	Recovered	Recovered	Went home on probation 7th June, 1897, and was discharged Sept. 2nd, 1897. Letter from sister Sept. 10th, 1897, states, "she is most agreeable with all, takes her part in household duties; she is better than she was even some time previous to going to an asylum some 4 years ago."
Curettage, divulsion and amputation of cervix uteri.	Recovered	Recovered	Went home on probation Feb. 16th. 1897, and was discharged Aug. 27th, 1897. Husband writes. April 25th, 1897, "Wife is well both mentally and physically."
Curettage and divulsion and amputation of cervix uteri.	Recovered	Improved	Is much quieter than formerly and does useful work in the house.
Coetiolomy. Tubercular spots covering mass: further procedure deemed inadvisable after exposing contents to sunlight and flushing with a normal salt solution.	Recovered	Improved slightly	Was home on probation for summer but now returned.
*Curettage, divulsion and amputation of cervix.	Recovered	Recovered	Was probated on March 9th, 1897, and discharged on May 21st, 1897. Patient writes on April 22nd, 1897 that she is perfectly cured.

Supplementary Table of Gynecological and other operative work done at the

N c.	Initial.	Date of admission. History of case.	Diagnosis of physical disease.	Date of operation.
12	A. F	Dec. 3rd, '96 Dementia; could give no account of herself, where she came from, who she was or how she got to London; bodily health, apparently good.	Uterine subinvoluted with endometritis. Uterus and ovaries prolapsed and retroverted and adherent. Ovaries somewhat large. Turned out to be cystic at operation.	Dec. 29th, 1896
13.,	M. G	Dec. 12th, '96. Puerperal manial of 18 months' standing; was in an asylum in B. C. prior to coming here.	Cervix uteri lacerated and hyper- trophied; uterus subinvoluted, with endometritis.	Jan. 5th, 1897
14 .	v. s	April 24th, '94. Mania of 2 months' standing; alternating attacks of excitement and quiescence.	Uterus 4½ inches long and leans to left of pelvic cavity. Large sized fibroid tumor attached to upper and right side of uterus.	Jan. 14th, 1897
15	A. C	Aug. 25th, '88, Puerperal mania of three years' standing: is now stupid and dirty.	Endometritis. Uterus subinvoluted. Cervix lacerated and hypertrophied. Perineum lace rated.	Jan. 19th, 1897
16	E. F	Aug. 28th, '88. Puerperal mania of 5 years' standing; cleanly and in better health.	Uterus subinvoluted, and 3½ inches long. Endometritis os. wide open. Cervix large and cystic. Perineum torn with protruding rectocele. Leucorrhoea thick and gelatinous.	Feb. 2nd, 1897
17	М. В	Aug. 15th, '88. Mania of 3 years' standing; excitable periods; bodily health, good.		Feb. 2nd, 1897
18	F. F	Jan. 19th, '97. Dementia of 2 years' duration; very deaf; bodily health, good.	Uterus subinvoluted and retro- verted. Cervix cystic. Right ovary prolapsed. Perineum torn.	Feb. 9tb, 1897
19	E W	Dec. 8th, 96. Mania of some time standing; miserable health; syphilitic manifestations.	Perineum torn with rectocele. Uterus 3 inches and retroverted. Contracted internal os. Externals showed evidences marked of syphilitic lesions.	
20.,	F. B	May 14th, '96. Mania of some months' standing; bodily health fair.		Feb. 231d, 1897
21	N. B	Jan. 27th, 97. Melancholia of 1 years' standing; very suicidal.		Ī
22	J. M	April 16th, '84. Mania; excit- able, violent; dirty in habits.	Uterus 4 inches, subinvoluted and bleeds easily; cervix large and cystic, especially posterior lip. Uterus retro-displaced.	

London Asylum for the year ending the 30th day of September, 1897..—Con.

Operation.	Physical result.	Mental result.	Remarks.
Curettage, divulsion, coelio- tomy with removal of ovaries and separation of adhesions and fixing of uterus to abdominal wall.		Recovered	Was discharged on June 16th, 1896.
Curettage, divulsion and amputation of cervix.	Recovered	Recovered	Was discharged on Aug. 9th, 1897, after being on probation 4 days.
${f A}{f b}{f d}{f o}{f minal}$ hysterectomy.	Recovered	Recovered	Still in asylum.
Curettage, divulsion, amputation of cervix and perineorrhaphy	Recovered	Improved	Still in asylum.
Curettage, divulsion, amputation of cervix and perineorrhaphy.	Recovered	Improved slight'y	Patient maintains improvement and is useful about the institution.
Curettage and divulsion	Recovered	Improved	Still in asylum.
Curettage, divulsion, coeliotomy and removal of cystic left ovray and fibrid right ovray. Ventro-fixation of uterus.	Recovered	Recovered	Friends communicated with to take her home as soom as they can complete arrangements.
Curettage, divulsion and perineorrhaphy (condition generally too wretched to do any more until improved in general health).	Recoxered	Improved	Some time later she developed a number of syphilitic ulcers all over body, rapidly becoming gan- gerous and sloughing. Exhaus- tion carried her off in less than a week, dying on March 10th, 1897.
Curettage, divulsion and coeliotomy, with removal of both ovaries.	Recovered	Improved	Has grown quite stout and is more tractable than forme.ly.
Curettage divulsion followed up by abdominal hysterectomy.	Recovered	Is improving	Is taking more interest in light work.
Abdominal hysterectomy and removal of ovarian cyst as well as fibroid tu- mor which was adherent to intestines and omentum as well.	Recovered	No improvement	Mental condition is just the same as before.

Supplementary Table of Gynecological and other operative work done at the

	ı			
No.	Initial.	Date of admission. History of case.	Diagnosis of physical disease.	Date of operation.
23.	L. B	Feb. 18th, '97. Mania of over 16 months' standing; at times destructive and violent; bodily health, tair.	Uterus 3 inches. Fibroid tumor attached to uterus on left side and beneath it in cul-de-sac, and adherent to it was an ovarian cyst the size of an orange. The latter filled the bottom of cul-de-sac and was inmovable from adhesions.	April 13th, 1897
24	M. W	Nov. 21st. Mania of 4 months' standing; thin, and in poor health.	Endometritis. Uterus drawn over to right side by some adhesion; 3 inches long; uterus bleeds easily. Left ovary smaller than right.	-
25	С. В	Feb. 27th, '97. Puerperal mania of 1 month's standing; very excited and violent.	Uterus subinvoluted # inch; bleeds easily; laceration of perineum; cervix cystic; some cysts in fold of vagina postfornix.	April 20th, 1897
26.,	В. Н	Feb. 18th, '98. Mania of over a year's standing; bodily health, very poor.		April 20th, 1897
27	L . Q	Dec. 23rd, '95. Mania of over a year's standing; violent at times; very delusional.		April 27th, 1894
28	J. L	April 1st, '97. Mania of over a year's standing. Too frequent child bearing.	Os open; parts relaxed; anterior lip of cervix thickened; slight bilateral laceration showing incomplete attempt at operation done 6 weeks prior to admission, but no doubt had reduced size of uterus, which is now 2\frac{3}{4} inches long, but bleeds easily.	April 27th, 1897
29	J. S	Feb. 24th, '96. Melancholia of 4 months; nervous; is restless; bodily health, fair.	Perineum torn and protruding rectrocele and cystocele; an- terior lip of cervix hard; cer- vix shows bilateral laceration; uterus 2½; climacteric a year ago.	May 11th, 1897
30	М. В	April 14th, '97. Dementia of over 11 years' standing.	Uterus 3‡ inches; bleeds easily and is retroverted.	May 18th, 1897
31	м. м	Oct. 23rd, '95. Melancholia; thin: had been much abused by husband.	Uterus 2\frac{3}{4} inches, subinvoluted uterus, although antiflexed, was somewhat retro-displaced.	May 25th, 1897
32,.	М. D	Sept. 18th, '95. Cho. mania of over 7 years' standing; bodily health, fair.		May 25th, 1897

London Asylum for the year ending the 30th day of September, 1897.—Con.

Operation.	Physical result.	Mental result.	Remarks.
Curettage, divulsion and amputation of cervix uteri.	Recovered	Improved slightly .	Is gaining slowly in weight, since operation has gained 6½ pounds.
Curettage and divulsion incission and scarification of cysts and per neorraphy.	Recovered	No improvement	In June she contracted an attack of bronchitis; phthisis supervened, causing her death on July 18th,
Curettage and divulsion	Recovered	Recovered	Went home on probation May 29th, 1897: was discharged Aug. 29th, 1897; mother writes July 10th, 1897, am pleased to state that my daughter "continues to remain quite well, both mentally and physically."
Curettage and divulsion; removal of hemovroids by Allingham's method.	Recovered	No improvement	Improved slightly for a while, but is now the same as formerly.
Curettage and divulsion, amputation of cervix; removal of hemorroids by Allingham's method.	Recovered	Recovered	Mental condition variable, although not so violent as formerly.
Curettage and divulsion	Recovered	Slightly improved .	Went home on probation May 27th, 1897, and was discharged July 30th, 1897; was very well when discharged.
Curettage and divulsion, and amputation of cervix uteri.	Recovered	Improved	Went home on probation for a little while but has returned, and is again improving.
Curettage and divulsion, and Alexander's opera- tion.	Recovered	No improvement	Has not gained in weight yet.
Curettage and divulsion	Recovered	Recovered	Gained in weight; is still in asylum
Curettage and divulsion; operation to be completed.	Recovered	Unimproved	Hysterectomy arranged for later

33	M. V.	Feb. 16th, '97. Melancholia of 6 months' standing; suicidal; poor physical health.	Uterus 2½ ins., retroflexed, and ovaries somewhat protapsed.	June 1st, 1897
34	S. L	March 10th, '93. Mania of over three years' standing; violent at times, untidy and uncleanly.	Uterus 3½ ins.; cervix lacerated; broad ligament, thickened on right side, and walls of uterus much thickened menorrhagic.	June 8th, 1897
35	J. McL.	May 22nd, '97. Mania of over 3 months' standing; stubborn, excitable; at times violent; bodily health, fair.	Uterus subinvoluted, and o. s. was so dilated that it would admit of the finger, as far as internal o. s.; length of canal 3 ins.; perineum slightly torn.	June 15th, 1877
36	C. W	July 30th, '91. Chr. mania of 2 years' standing; excited and very noisy most of the time; habits, filthy; bodily health, fair.	Uterus 3½ ins. and bleeds easily, also retro-displaced; cervix badly torn; both ovaries prolapsed; the right small, but the left was size of a hen's egg and was found to be a multiocular cyst.	June 25th, 1897
37	L. J	Jan. 15th, '94. Mania of 5 weeks' standing; dementia, trouble- some, and uses very bad lan- guage; health, fair.	Uterus $2\frac{3}{4}$ ins.; cervix lacerated; urethra bruised.	July 6th, 1897
38	М. D	June 28, '97. Mania of a month's standing; cleanly, and in good health.	Uterus 2 ³ / ₄ ins., subinvoluted with endometritis, contracted; internal os; floating right kidney.	July 6th, 1897
39	A. B	June 28th, '97. Mania of over 2 months; violent, and hard to manage; filthy, and health poor.	also a laceration of cervix, an-	
40	C. W	June 21st, '97. Melancholia of over 6 months'; bodily health, fair.	Uterus 23 inches and retroverted; ovaries very small.	July 20th, 1897
41	C. B	March 31st, '97. Mania of over 3 years' duration; quiet; bodily health, good; cleanly in habits.	Cervix uteri lacerated and cystic; uterus 3 inches, retroverted and ovaries prolapsed.	Aug. 3rd, 1897
42	J. L	June 7th, '97. Mania of over 1 year; very delusional; bodily health, fair.	Uterus subinvoluted; cervix hypertrophied and lacerated.	Aug. 10th, 1897

London Asylum for the year ending the 30th day of September, 1897.—Con.

Operation.	Physical result.	Mental result.	Remarks.
Curettage and divulsion, and Alexander's opera- tion.	Recovered	Improved slightly .	Still in asylum.
Abdominal hysterecotomy.	Recovered	Unimproved	Is much quieter than formerly.
Curettage, divulsion and amputation of cervix.	Recovered	Recovered	Went home on probation July 10th, 1897, and was discharged August 27th, 1897; letter from father stating that she is quite smart.
Vaginal hysterecotomy	Recovered	Unimproved	Is much quieter than formerly, and is cleaner in habits and is able to live in a quiet hall; also works well.
Curettage, divulsion and amputation of cervix.	Recovered	Improved	Still in asylum.
Curettage and divulsion; was in hospital before coming to the asylum, but they could do nothing with her.		Recovered	Went home on probation on Aug. 10th, 1897, and was discharged Sept. 10th, 1897. Her husband writes, Sept. 10th, 1897, am pleased to inform you that my wife is getting on nicely; she is now on the way to altimate recovery.
Curettage, divulsion and Alexander's operation.	Recovered	Improving	Is now quiet, easily managed and is gaining in weight steadily and improving mentally.
Curettage, divulsion and Alexander's operation.	Recovered	Improved slightly	Still in asylum.
Curettage, divulsion, coe- liotomy with removal of both ovaries; the right a complete cyst; the cyst left also a cyst of ovarian ligament.		Is improving	Still in asylum, gaining steadi y in weight.
9	Recovered	Unimproved

43	E.W.D.	Oct. 26th, '96. Melancholia of 2 months; bodily health, fair; fights every day to get away; hard to manage.	Uterus 34 inches and retroverted; cervix torn and perineum lace- rated.	Aug. 24th, 1897
44	E. M	July 24th, '97. Mania of over 3 years' standing; bodily health, poor.		Sept. 14th, 1897
45	М.Ј. Н.	Nov. 9th, '93. Mania, quiet ; fair health.	Perineum torn almost into rec- tum, causing an extensive rec- tocele and chronic constipa- tion.	Sept. 21st, 1897
46.	E.W. J.	Oct. 8th, '95. Chr. mania of over 8 years; wrote books and hawked them among her friends; fair health.	Cystic tumor as large as full term of pregnancy at operation was found to be a papillomatous cyst on left, ovarian cyst on right; uterus fibroid; in cli- macteric.	,

II.—OTHER THAN GYNECOLOGICAL

Besides the forty-six gynecological cases, of which the full detail has been given, there were fourteen other patients, nine male and five female, who were operated upon. All of these made a good physical recovery, and their general health and comfort are very much enhanced.

Eight of these patients were operated upon for the radical cure of hernia—four being right inguinal and, three left inguinal, and one a strangulated right femoral. The latter was operated upon within an hour of the discovery of the incurcerated rupture. The contents of the hernial sac were six inches of small intestines, (which was of a very dark red color and temporarily paralyzed) and a quantity of red serum. The Bassini method was followed in closing the wound, after freeing the strangulation. The patient made a good recovery from a condition which would have certainly caused her death had no operation been done.

Three operations were done for the removal of external benign tumors, one for appendicitis, one for epithelioma of the face, and one an amputation of the thumb. All these cases did well, and are now well physically. No mental improvement, which could be attributed to the operation, followed in any of these cases. The table below will give fuller details.

 ${\bf London~Asylum~for~the~year~endmg~the~30th~day~of~September, 1897.--} Con.$

Operation.	Physical result.	Mental result.	Remarks.
Curettage, divulsion and annutation of cervix and Alexander's operation.	Recovered	Unimproved	Still in asylum.
Vaginal hysterectomy	Recovered	Is improving	Still in asylum; not out of bed yet.
Curettage and colpo-perincorrhaphy.	Recovered	Unimproved	Still in a-ylum; not out of bed yet,
Coeliotomy and hysterec tomy, removal of a tumor 15 lbs. in weight, cystic tumor with uterus adherent, and 6 in of sigmoid; flexure of colon firmly attached to tumor.		Unimproved	On Oct. 11th she is doing very well; stitches all removed; gaining every day; would have been fatal without operation.

Radical cure by the Bassini method.	Recovered	Unimproved	No return of hernia.
Applied actual cautery thoroughly to ulcer, fol- lowed by arsemcal plas- ter for 20 hours.	Recovered	Recovered	Discharged on probation April 19th, 1897,
Radical cure by the Bassini method.	Recovered	Unimproved	No return of hernia.
Incised and shelled out cysts.	Recovered	Unimproved	Still in asylum.
Radical cure by the Bassini method.	Recovered	Unimproved	No return of hernia.
Incised and enuclated tu- mor.	Recovered	Improved	Still in asylum.
Incised and enuclated tu- mor.	Recovered	Unimproved	Still in asylum.
Radical cure by the Bassini method.	Recovered	Unimproved	No return of hernia
Amputation of first phalanx of thumb.	R*covered	Unimproved	Still in asylum.
Radical cure by the Bas- sini method, after free- ing strangulated gut and revising it.	Recovered	Unimproved	Small intestine and of a dark red color and sac filled with reddish serum; strangulated at neck of sac by neck itself and not Gimber- nats ligament.
Radical cure by the Bassini method.	Recovered	Unimproved	No return of hernia.
Removed the appendix	Recovered	Unimproved	Still in asylum.

REPAIRS, RENEWALS, ETC., OF YEAR.

I shall only mention here the most important items of work done during the year: (1) We placed new concrete gate posts and iron gates at the main entrance to Asylum grounds. (2) Finished the farmer's house, making of it a good comfortable residence. (3) Fitted up the new paint shop. (4) Completed our new fire hall. (5) Fitted up an operating room on infirmary flat, main asylum. (6) Built a large new shed in sewer field and moved the old shed across the field and fitted it up for a watch-house. (7) Built a good sized brick addition to the plasterer's shop. (8) Made a large extension to the drying room in laundry. (9) Built a brick kitchen and board shed at front gate lodge. (10) Re-fitted chief male attendant's house. (11) Reconstructed 4,134 feet of outside fence. (12) Renewed floor in basement of north building. (13) Fitted up two new closets off amusement hall.

NEW WORK.

The only thing I shall mention under this head in this report is the long promised and much needed infirmary. We are doing at this Asylum, as our report shows, a good deal of surgical work, and we are doing it in the meantime under considerable disadvantage. Surely we need an infirmary as much as other institutions to which this great modern convenience (I might say necessity) has been supplied. The Government seems to admit, by their reiterated promises to build it, that we ought to have this addition to our institution. Why then not let us have it? I carnestly hope that another year will not pass without, at least, a beginning being made in this, to us, vitally important business.

Amusements.

There have been no changes in these. We used our amusement room one hundred and eleven times in the course of the year. In it we had nineteen lectures, forty-six dances, twenty-two "at homes," and twenty-four theatrical and other entertainments. The total attendance of patients, on these one hundred and eleven evenings, was 34,888, or an average of about 315 patients at each entertainment. As in all respects, including summer evening concerts (under the leadership of Dr. Sippi), annual athletic sports and the rest, there has been no change from recent practice I shall not occupy space with more detailed statement.

Religious Services.

Last year's report would do equally well for this year. All has gone quietly and well. There has been no change. I again extend my heartfelt thanks to all the clergymen who have kindly, freely and without reward rendered these important services to our patients.

OFFICERS AND EMPLOYEES.

During the past year there have been no changes among the former and very few among the latter. All has gone smoothly and well. Each has done his or her part in a satisfactory manner.

In this connection, I desire to say that to my second assistant physician, Dr. A. T. Hobbs, is almost entirely due the credit for the surgical work done at this asylum. Since entering upon this field three years ago, Dr. Hobbs, by study and practice, has made himself as I believe, one of the best operators in Canada, and I esteem myself fortunate in having him on my staff.

I wish also to again thank the bursar, Dr. Sippi, for the time and ability he has bestowed upon the musical work of the institution. Were it not for him our position in this regard would be very different from what it actually is.

FARM AND GARDEN.

Our crop this year was, on the whole, fully up to the average. The farm crop was as under:

Hay	 	 	80	tons.
Millet				· · ·
Straw	 	 		
Oats				
Corn ensilage .				tons.
Corn in cob	 	 	GOO	bushels.
Potatoes	 	 	2.10) ''
Peas	 	 	30) "
Carrots	 	 	68-	Ļ
Mangles	 	 	4.70	
Milk	 	 	36.90:	3 gallons.
Pork (dressed).	 	 	12.039	pounds.
Live hogs	 	 	38.470	;

We still further reduced the cost of production of milk from 1.33 per cent. last year to 1.18 per cent. this year.

In the main garden of the asylum the crop was as under:

VEGETABLES.

17041
Asparagus
Beans, green
Beets 634 bunches.
Beets 610 bushels.
Cabbage
Cabbage, pickling 437
Cauliflower
Carrots 1,950 bunches.
Carrots 850 bushels.
Celery
Corn
Cucumbers
Cucumbers, pickling 83 quarts
Horseradish 160 bunches
Kale
Lettuce, forced 167 dozen.
Lettuce, garden 1.797

Onions, green Onions, dried Onions, pickling	1,492 bunches. 213 bushels. 174 quarts. 696 bushels.
Parsnips	69 "
Peppers, large sweet	
Peppers, cayenne	78 quarts. 276 bushels.
Radish, forced	618 bunches. 2,812 "
Radish, garden	106 "
Rhubarb, garden	5,639 " 388 "
Salsify	100 bushels.
Spinach	$\frac{302}{263}$ "
Squash	308 "
Turnips	1,530 bunches. 185 bushels.
Turnips	roa busneis.

FRUIT.

Apples	320	bushels.
Apples, crab		6.6
Currants, red	2,293	quarts.
Currants, white	315	61
Currants. black	347	6.6
Cherries	756	• 6
Citron	120	
Gooseberries		"
Grapes	$18\frac{1}{2}$	pecks.
Melons, musk	778	
Plums	717	"
Pears	579	٠.
Raspberries	1,694	quarts.
Strawberries	763	"

HERBS.

Mint	150	bunches.
Parsley	150	"
Sage		"
Savory	500	"
Thyme	300	۲,

Of plants grown for winter flowering and decorative purposes, we produced 6,079: we raised for bedding purposes 48,926 plants; of annuals raised under glass we produced 28,536; from our nursery we transplanted 556 trees.

The produce of the sew age farm was :

Asparagus	408 bunches.
Beans string	49 bushels.
Beets, young	2,652 bunches.
Beets	$162\frac{1}{2}$ bushels.
	-

Celery	sticks.
Carrots	bunches.
	B bushels.
Cabbage	i heads.
Cucumbers, forced 56	
Cucumbers	dozen.
Lettuce, forced43 1-	
· •	B bunches.
) bushels.
Peas	1 4
Parsnips	j "
	5 bunches.
Radish, garden 509) "
	bushels.
Tomatoes	
Melons, musk	8
Melons, water	_
Strawberries	S quarts.
Option and the second s	- Tuester

The Bursar, at my request, had the value of this sewage field crop estimated in the city by a business man who is an expert in this business. He reckoned it to be worth \$1,246.39, which is a good yield for six acres of land, though not as good as we have had in some former years.

I have the honor to be, Sir,

Your obedient servant,

R. M. BUCKE

Med. Supt.

R. Christie, Esq.,

Inspector of Asylums,

Toronto, Ont.

ANNUAL REPORT OF THE MEDICAL SUPERINTENDENT OF THE ASYLUM FOR THE INSANE, KINGSTON, FOR THE YEAR ENDING 30TH SEPTEMBER, 1897.

OCTOBER 1st, 1897.

TO ROBERT CHRISTIE, ESQ.,

Inspector of Asylums and Public Charities of Ontario:

SIR,—In accordance with the statutory requirement, I have the honor to submit the forty-second annual report of this Hospital (the twentieth since it became a provincial institution) for the year ending September 30th, 1897.

	Males.	Females.	Total.
There were in residence Oct. 1st, 1896	290	266

Admissions.

Of the admissions it may be said that never in the history of Rockwood has such an unfavorable lot of cases been admitted. Acute insanity is certainly not on the increase in this district, but we have gathered together a large number of the chronic cases of the community—some of these, at least, should never have reached this institution. It is the old story of careless relatives, who take advantage of the warrant system, to get rid of the feeble dements who need a little care and nursing, not detention in a hospital for the insane. Of 65 patients admitted no less than 57 belonged to the chronic and incurable class. It is true that many of these were called recent cases by the persons making application for admis-

sion, but a careful analysis of the history of each gives the above result—that is, only nine recent cases were admitted, and of these nine, there is reason to believe that some were not acute in the true sense. It is not difficult to understand the smallness of our discharge list under the circumstances. Four idiots and imbeciles, who should have been sent to Orillia, were received. It is a mistake to have them admitted here, but the overcrowded state of Orillia left no alternative. The Government is frequently called upon, it is morally certain, to assume burdens which, in all fairness, should not be carried by the people: and yet the way out of the difficulty is not easy, simply because every man's hand is, to a certain extent, against the Government, and the people themselves are to blame.

The cost of caring for the insane has become an enormous tax upon the State, and that this tax should be distributed in a manner somewhat different from the method in vogue at present, is quite apparent to those who have much to do with institution management. In other words, well-off individuals should be made to incur responsibilities, which are at present very often thrown on the Government. The best that can be done, is done, with the present system, but it is patent that the day for a change is coming. To illustrate: A. has an insane father, a harmless old dement who could be cared for at home, but who is in some respects a nuisance. A. is moderately well off, quite able to pay for his father's support at the rate of \$2.75 per week, but is willing to avoid the obligation. He has his father committed to gaol as a dangerous lunatic; a little stretching of conscience, and a modicum of hard swearing, are all that are necessary to complete the committal as an indigent insane person. The neighbors think it is a smart trick for A. to get rid of his responsibility, and the Government is saddled with the cost of this insane person's maintenance. As a matter of fact, if a different method had been followed, the patient would have been cared for at home, or if admitted to an institution, been paid for by the friends. This is not an imaginary case, but such are occurring somewhat frequently, and the remedy is simple. If the counties were asked to pay a part of the maintenance of all the indigent insane admitted from their respective districts, we should not be long in finding out who are not able to pay for their maintenance. If this plan were adopted it would really lighten the burden on the people, and, in the long run, the counties would receive the benefit.

The per capita cost of patients cared for in hospitals for insane in Ontario is extremely small, and the present system is infinitely better than that of county institutions for chronics, where all sorts of abuses would creep in as a result of the absence of skilled nursing and constant medical supervision, for after all many of the chronic insane are as great a charge as the acute, and oftentimes more difficult to manage. In a general way, I might say that I do not believe it would be wise for the Government to depart to any great extent from the methods they have adopted in the past, in regard to the care and treatment of the insane, but I would suggest some modifications. It is a well known fact that Ontario supports its insane at a cheaper rate than almost any other country in the world, and it would be neither expedient nor advisable to endeavour to lessen the Our hospitals are not richly furnished, but they are comfortable and happy homes for the patients they shelter. The central system offers every possible advantage over any local care system that can be devised, and yet this problem is imminent if the steady demand for room for indigent chronics continues, and certainly the counties will find it far more economical to have a reasonable sum per capita eharged against them for the care of the indigent insane in central hospitals, than to erect and maintain small local institutions. When considered fairly, it will be seen that the proposition made would not bear heavily on the counties, but on the contrary would distribute a

burden far more evenly than at present. If the counties were directly responsible for a portion of the cost of maintenance their would at once be established a supervision over county affairs, that is not possible while they are regarded as provincial rather than local.

DISCHARGES.

Having regard to the character of the admissions during the year it is not surprising that the discharge list of recoveries is very small, only about twenty-three per cent, calculated on the admissions of the year as against fifty-six per cent, of recoveries during the last official year. These figures will of course vary from season to season, and as a matter of fact, the only way of calculating recoveries, is to base them on the proportion of recent cases admitted.

Deaths

The death rate has been abnormally high for Kingston, and the occurrence of so many cases of phthisis, referred to further on, accounts for this unusual proportion of deaths.

One patient, Thomas Menard, committed suicide by hanging, on March the third. The circumstances were fully reported to you at the time of the occurrence, and a thorough investigation held by Coroner Kilborn, completely absolved all those who were immediately in relation with the patient, from any charge of neglect or carelessness. The whole thing was planned so suddenly and carried into effect so quickly, that it is astonishing the patient succeeded in effecting his purpose. The incident was all the more regrettable, because the patient appeared to have a reasonable chance of recovery, and was not suspected at the time of having the suicidal impulse strongly developed.

With some concern the increase of tubercle has been observed in our wards, and it is a notable fact that nearly forty per cent. of the deaths have been from this disease alone. We have taken every precaution in the way of isolation in the hospital building, but in spite of this, the disease has been alarmingly common. Our cows, as far as can be ascertained, are perfectly healthy, and milk as a source of infection can be reasonably excluded. It may be that we have had a larger number of people resident than usual who were susceptible to the ravages of the tubercle bacillus, for certainly, never before have such precautions been taken in the way of isolation and disinfection.

A Home for Nurses

For many years we have devoted much attention to our Training School for Nurses, which was one of the pioneer establishments of the kind in America, and we have reason to believe that this school has been of the greatest service in the development of a class of nurses, so superior in every respect to those of the past, that comparison can scarcely be made. We have succeeded in getting well educated and refined young women, deeply interested in the work of nursing the insane, and the results have, year after year, been more satisfactory. The time has come when another advance should be made. The work of nursing requires energy, and devotion to duty, to make it successful, and the development of the hospital idea calls for unremitting toil on the part of the nurse. All of these things have been received from our nurses, and we have not done as much in return as could have been wished. Their remuneration is not large, and the smallness of our staff makes the amount of duty required without relaxation.

great. When a nurse goes off duty, if she happens to be without friends in town she has absolu ely no place to which she can retire for quiet and rest, to say nothing of amusement, beyond her room on the ward. It requires very little thought to recognize the fact that this is scarcely fair to the nurse, and it is essential that a comfortable home for nurses who are off duty, should be erected somewhere in the grounds. Such a building would cost very little, as it need not be large and would not require expensive furnishings. Very few people, who are not familiar with hospitals for the insane, have any idea of the trying nature of the work of nursing the insane, and yet there are few who will deny the advisability of some such arrangement as that suggested above. When it is asserted that the work of nursing the insane is universally admitted to require far more nervous energy and patience than that of nursing the sane, and it also is admitted that nurses' homes are a necessity in connection with every general hospital, the justice of the plea entered will be seen.

Most of the male attendants are married men and receive a certain number of evenings in the week at their homes, consequently the argument which applies to the female nurses, cannot be so successfully advanced in their case.

PATHOLOGICAL INSTITUTE.

Ontario must keep abreast of the times if she is to retain her good name in connection with the question of the treatment of the insane. While it is true that she has always been liberal in her expenditures for the care of the insane, too little attention has been given to the insanity problem. It is almost impossible to make many advances with the equipment at hand, and certainly with the small medical staffs there is little opportunity for scientific study, as the assistants are called on to do so much clerical work, that when they have finished their routine duties, there is no time left for original investigation and experiment. Our staffs are equipped simply with the idea of meeting the every-day requirements of the institution, and the fact that Ontario has as much right to contribute to the solution of the vexed question of the causation and prevention as other countries has been lost sight of to a large extent. In New York State this side of the question has appeared of so great import, that a magnificently equipped Pathological Laboratory with eminent pathologists in charge, has been established in New York. At this central laboratory all important pathological work in connection with the State Hospitals for the insane is done, neurological studies of various kinds carried on, and assistant physicans given every opportunity to acquire special knowledge in physiological chemistry, pathology and psychology. Our neighbors, proverbially shrewd, have recognized the fact that money spent in such a Pathological Institute will eventually bring in an excellent return, and certainly it is merely recognizing a duty owed to society. We are able to grapple with many of the practical problems in connection with insanity, but there are so many beyond the possibility of study without such a laboratory as that of New York State, that I would urge the Government to seriously consider this whole question. With such a laboratory, a somewhat larger medical staff, and assistants specially educated and qualified, we should do better work than is possible at present. If such changes were made, and assistants obliged to carry on original investigations in psychology and physiology, we would be making an advance that modern medicine insists on as necessary to keep abreast of the times. With the limited means and slender equipment at our disposal, we shall do what we can at Rockwood to keep up with the rapid strides being made elsewhere, but it is very hopeless work, handicapped as we are in the unequal race.

GAS PLANT.

The time has come when the question of gas vs. electricity will have to be considered. A great deal of our gas plant is worn out, and if we continue gas making a considerable outlay will be required to make necessary repairs. The large gas holder is full of leaks, and is so frail that it will not stand repairs. The gas well is defective and should be rebuilt. If an outlay is required it is a question if it would not be better to light the institution by means of electric light, which is so much safer and far more satisfactory than gas.

GENERAL REMARKS.

The usual amount of attention has been given to the Training School for Nurses. Physical culture and amusements for patients and in every way possible an effort has been made to advance.

The staff as a whole is an enthusiastic one, and there is little difficulty in getting the employees interested in every new development. The greatest of harmony has prevailed throughout the hospital and there has been little cause for complaint on the part of the superior officers.

Farming operations have been fairly successful, although the ensilage crop proved a comparative failure.

I have the honor to be, Sir,

Your obedient servant.

C. K. CLARKE,

Medical Superintendent

Admissions and Discharges.

The total number of admissions this year is 173 as against 156 last year. Of the admissions 20 males were transfers from the London asylum and 2 males were from the Toronto asylum. The number of discharges is 70 against 80 last year. Of the discharges 41 were recovered, 27 were improved, and 1 was discharged as not insane.

On the 2nd of February, 20 males were transferred to Brockville asylum and on June 15th, 20 males were again transferred to Brockville, 3 women were transferred to London asylum and 1 man to Toronto asylum.

The admissions including transfers exceed the admissions last year by 17. $O^{\mathbf{f}}$ the admissions 49 were over 50 years of age. 1 was between 80 and 90 years of age, 6 between 70 and 80, 16 between 60 and 70, 26 between 50 and 60. The percentage of recoveries is lower this year on account of the large number of semile cases admitted. Of the discharges 27 are classed as improved. The temptation is always to make the recovery list as high as possible, and though some of those classed as improved ultimately make good recoveries, yet as the most of the cases were on probation among their friends, who are not always capable of deciding intelligently, we think it safer in the absence of positive information to follow the conservative course and class them as improved. It is very disappointing to discharge a case as recovered and in a few weeks or months to readmit the case for further treatment. It is not only a reflection on our judgment, but puts the friends to unnecessary trouble and expense and brings discredit to the asylum. It is true we are often at the mercy of importunate friends and the temptation is often great to yield to their entreaties against our better judgment and discharge the case. Occasionally a most unpromising case which has defied all asylum treatment, will, when transferred to the home environment make an excellent recovery. The vagaries of the human mind are so complex and mysterious that it taxes our skill and judgment to the utmost at times to decide whether to grant or refuse a probation. The demand for asylum accommodation is so great that we are often tempted to give the patient the benefit of the doubt for the purpose of making room for a more urgent case.

DEATHS.

The number of deaths is 47 against 62 last year, or 4.1°, this year against 5.4°/, last year on the whole number under treatment. One death was the result of accident. He was engaged in painting the outside woodwork of the main building and was in charge of our regular painter. He was a painter by trade, and an expert hand at that class of work. The scaffold on which he stood gave way and he fell to the ground, a distance of 20 feet. His injuries were not considered fatal, but after several hours a comatose condition supervened and he died from shock. A post mortem examination revealed a fracture of the pelvis and a fracture and dislocation at the elbow joint. Another case committed suicide while at home with his friends. He was discharged on probation and when he left the asylum was apparently well mentally. Domestic and business cares were too much for him, and without any premonition he ended his life by cutting his throat with a razor.

COST OF MAINTENANCE.

The per capita rate of maintenance this year is \$115.82 against \$118.49 last year, being a per capita decrease of \$2.67. Notwithstanding this decrease in our maintenance rate, our equipment has never been better than during the past year,

our patients have been better fed, better clothed and their general comfort better provided for than ever before. By the addition of two large portable ovens in the kitchens at main building and orchard house, we have been enabled to provide a richer and more varied dietary. It has also provided facilities for the employment of a larger number of female patients in the kitchens, who find excellent opportunities of displaying their skill in the culinary art. Experience proves that the kitchen with a well stocked larder is the best hospital for women suffering from exhausted mental and physical function. Many of our patients are broken down farmer's wives and the work in the kitchen is congenial to them; they quickly put on flesh and correspondingly improve mentally.

I submit below a quinquennial statistical record of the operations of this asylum. It shows in a very succinct way the principal operations of our asylum work and the results during the past five years. It will be noted that, while each year has a distinctive history of its own, yet there is a wonderful uniformity in regard to both the work done and the results.

Quinquennial Statistical Record.

Pate,	No. under treatment.	No. admitted.	No. discharged and improved.	Percentage of discha ges on admissions.	No. died.	Percentage of deaths on num- ber under treat- ment.	cost of	Rate per week.

ADDITIONS, ALTERATIONS AND REPAIRS.

The new hospital is almost completed and is a beautifully constructed building. The appropriation for its completion is, I believe, exhausted, so that the operating room, elevator and a few other minor things which are not finished yet, will have to wait for another grant of money by the Legislature. The furnishing will require another grant, and I trust it will be sufficiently liberal to equip it with every modern convenience.

A new boiler for heating purposes has been put in at main building. This is a welcome addition and we trust will overcome the defective heating so long complained of.

The farmer's house has been completely overhauled, many important additions and repairs were made which add to its comfort and convenience, and it

has been repainted outside and in. The outside woodwork and window guards of main building, which had become very dingy have been painted throughout, and the stone work of the basement has been repointed. The building now looks fresh and clean and we feel well repaid for the labor we have expended on it.

An old barn which stood isolated on the back part of the farm, and which was pretty well dismantled from age and neglect has been reconstructed. A stone foundation was put under it, the old boarding was taken off and replaced by new. It is now a respectable looking building and is used as a storage barn for hay. The basement wall of the silo had begun to spring a little from pressure and we found it necessary to build an outside stone abutment to strengthen it.

An appropriation was made last year for altering the water-closet system at main building. Under your instruction I ordered a set of the automatic syphon water-closet which has just been put in the male basement by our engineer. Our experience with it has been so short that we are not justified yet in saying whether or not it will be satisfactory. The quantity of water used is an important consideration here, but further experience will enable us to determine this point.

Many other additions, alterations and repairs of a minor character incident to the every day wear and tear of a large institution were made which are too numerous to mention here, but which are all tabulated at the end of this report under the head of the different departments.

WANTS FOR NEXT YEAR.

We want an appropriation to finish and furnish the hospital, also a mortuary and pathological room convenient to the hospital. Our present mortuary is inconveniently situated to the hospital, and as the most of the deaths will take place there, it is important that the mortuary should be in a retired convenient place adjoining that building. The death rate at an asylum affords an inviting field for the pursuit of pathological research. We have devoted a good deal of attention to this department of science and have been richly rewarded for our labor. In no other way can we hope to advance our knowledge of the cause and treatment of disease except by careful and searching examination into pathological conditions.

We want a new amusement hall crected on the level. The present hall was intended for a population one fourth of the present and all living in one building. Now we have four buildings isolated at considerable distance from each other. The present hall is in the third story of the main building, and can only be reached by a circuitous climbing of stairs so that the feeble and delicate cannot reach it at all. It is also inconvenient and often disagreeable to reach from the other buildings especially at night when amusements are going on, but the most objectionable feature of all is the danger from fire, situated as it is at that height from the ground, with only one door of ingress and egress and often from three to four hundred people in it, the danger from fire is alarming. It is true we have taken every precaution to forestall an accident of this kind by providing a fire escape on each side, yet with the present means of exit, I am satisfied that a panic from a fire might be attended with serious results.

What we want is an amusement hall and chapel erected on the ground level, centrally situated to all the buildings. The old hall could be fitted up into dormitories, or better still, into a work room—a place we are very much in need of.

In other reports I have referred to the shabby entrance to the main avenue from James street. We want about 150 feet of iron fence and gate across the front of the avenue. I trust this will be the last year I shall have occasion to refer to this much-needed improvement. I asked for a skating rink last year: may we hope to see it materialized this year? If so, then glad and joyous hearts will crown you with gratitude. For two years in succession there has been an appropriation for an ice-house, but for some reason we do not seem to get it. Apropos to this subject, I might raise the question of providing a plant for manufacturing our own ice. Our ice comes from Burlington Bay, and there is always a question as to its purity. It has to be cut and hauled up the mountain, which is a costly and laborious job. An ice plant, with a cold storage building would be one of the most useful, as well as the most profitable, adjuncts to our equipment, and I trust it will receive your careful attention.

The gas supply here is atrociously bad, and since the addition of another building, making further demands on the supply, we may expect it now to be still worse. The gas main from the city, which was sufficient in the early history of the asylum, is quite insufficient now. The Gas Company offer to put in a larger main from the city, with enlarged branches to the different buildings, provided we do the digging, and this seems to be the only solution of the difficulty.

I am in hopes that before long we may have an electric plant of our own, or receive a supply from some of the projected sources of generating it at a distance.

The house occupied by one of the farm hands is in a dilapidated condition, and will not pay to repair it. We want a small appropriation to erect a new one, and will promise to do the work with our own labor.

Insane Criminals.

Several years ago the East House cottage at this asylum was set apart by Order-in-Council for the reception of insane criminals. The building is on the plan of a centre and two wings, with accommodation for 80 patients. The north wing is now occupied by 20 male lunatics, who have committed various crimes, for which they have been tried and acquitted. The centre part and south wing is occupied by 60 quiet, harmless women. There is an associated dining-room for all the patients in the building.

As no regulation has ever been issued as to the mode of treating insane criminals, the law presumes, I dare say, that as they are all possessed, more or less, of dangerous tendencies, a close surveillance should be held over them as a protection to the public, in other words, that their treatment shall be more of a penal character, as compared with the humane treatment of the non-criminal insane. It will at once be seen that the presence of this criminal colony in our midst is an anomaly in our system, and a constant menace to the perfection and uniformity of our system of treatment.

The law has declared them irresponsible for the crimes of which they are charged: shall we then continue to treat them as criminals after the law has declared them innocent: or, shall we surround them with our best and most humane methods of treatment, with a view to restore reason, and enable them again, if possible, to resume the responsible duties of citizenship?

In caring for lunatics of criminal propensities, the protection of the public is, of course, the first consideration; and the care of such a class is a constant source of anxiety to the superintendent and other officers in charge.

Some people object to sending their friends to an asylum where they may have to consort with people who have committed the gravest crimes known to the law. I trust the time may soon come when separate provision will be made for the care of this class, under other conditions than in an ordinary asylum, and in a building specially constructed and equipped for the purpose.

FARM AND GARDEN.

The products of the farm and garden are greater this year than ever before. The drouth in the latter part of the season has interfered somewhat with the growth of roots: the potato crop is especially affected, and will scarcely be an average crop.

I append below a statement of the products of the farm, including the market valuation, which amounts to \$11,542.30. The wheat, amounting to 837 bushels, has been sold at the price stated; the other products are valued at an average market price. I also append a statement of work done in making improvements on the farm.

Articles.	Quantities.	Price.	Value.
Fall wheat, 12 acres	586 bush.	8 c. 85	\$ c. 497 10
Spring wheat, 10 acres	251 ''	81	203 31
Oats, 40 acres	2,181 ''	24	523 44
Hay	150 tons.	8 00	1,200 00
Straw	150 ''	6 00	900 00
Potatoes	1,800 bush.	50	900 00
Carrots	500 ''	20	100 00
Mangolds	1,500 "	20	300 00
Turnips	5,000 ''	20	1,000 00
Corn for silo, 30 acres	500 tons.	1 50	750 00
Milk	122,240 qts.	03	3,666 12
Pigs—196 sold live weight			1,502 33
Total value of farm products			\$11,542 30

WORK DONE ON THE FARM.

- 340 rods patent fence built.
- 40 rods picket fence built.
- 148 rods wire fence built.
- 200 loads of broken stone teamed, for making road around piggery and barn.
- 162 rods tile drain laid.
- 12 loads of sand teamed for barn foundation.
- 15 loads of stone teamed for barn foundation.

An additional fifty acres of land was purchased during the year. The land is good but in a rather poor state of cultivation, it all requires under draining, and during the summer we laid a good deal of tile on it.

The garden yielded even more abundantly than usual and is one of the most important adjuncts of the institution. A very great variety of vegetables and fruits was furnished in due season, which was greatly relished by everyone. The apple crop is deficient this year on account of the excessive yield of last year.

The ornamental grounds never looked so well and were never so well cared for as this year. The frequent rains in the early part of the summer kept our lawns green until late in the season. The estimated yield of the garden is \$5.748.43 as against \$4.667.92 last year, being an increase of \$1.080.51.

I would refer you to the tabulated statement at the end of this report for a detailed account of the products of the garden.

LABOR AND RECREATION.

Alternate labor and recreation are the chief means we rely on to woo the disordered minds of our patients back again into normal channels. This together with hygienic and comfortable surroundings, regular habits, the enforcement of discipline and a liberal dietary, works a marvellous curative effect even on our most helpless cases Many of our patients come here through a persistent disregard of the above conditions which are so essential to healthful living. The popular idea is that medicine is the cure for all the ills the mind and body are subject to, forgetting that it is the violation of natural law which is the chief cause of every departure from normal, mental and physical health. Many violate these laws from ignorance, others from sheer reckle-sness or indolence, but in every case nature imposes the penalty and the unhappy victim must suffer the consequences. In a large institution like this there is necessarily a large amount of labor to be done to keep it in running order, such as the cooking department. the laundry, the baking, the making of clothing, boots and shoes, the carpentering. the engineering and heating, the mason work and painting, the extensive farming and gardening operations all afford admirable opportunity for the employment of labor of a diversified character suited to the tastes and requirements of all classes. The modern asylum is or ought to be in its normal condition a busy hum of industry, every department of it working to a common end, viz., an exemplification of the highest and best methods of living, with a view to restoring in morbid minds those habits of life which are essential to healthy, mental and physical health.

The brain is a many functioned organ requiring a diversity of labor, recreation and rest to fully develop and maintain it at a normal standard, hence we are under the neccessity of providing not only labor but also a variety of recreation and amusements suited to the wants and requirements of a large population. In winter owing to the inclement weather the feeble class have necessarily to spend a good deal of their time in doors. The weekly dance, concerts, at homes, games and dramatic performances provide congenial amusement for this class. The more vigorous are able to engage in skating, curling and sleigh-riding as a past time, which they thoroughly enjoy, for this purpose a large skating rink would be a great boon to this class. In summer we have frequent band concerts on the lawn, bowling matches on the green which is a favorite pastime, baseball matches, tennis, croquet, etc. Our brass band and orchestra have done splendid

work throughout the year in adding to our amusement, and we are under great obligation to the leader, chief attendant Thompson, for his laborious and painstaking efforts.

The annual games and exhibition of fancy work in the female department which is always a gala day at the asylum, were held on September 24th, and passed off with great success. Refreshments of cakes, bins and lemonade were served in great abundance. The day was fine and everyone was in good humor and on their good behaviour. Every event was hotly contested and liberal prizes were offered to the successful contestants. The exhibition of fancy work by the women was the largest we have ever had and the judges were often perplexed in awarding the prizes. In the evening a dance was held in the amusement hall, at which many visitors from the city were present and took part, including the Hon, and Mrs. J. M. Gibson, Mr. and Mrs. Charlton, Mr. and Mrs. Wardrope. We are again indebted as we have been many times before to Mrs. Gibson, Mrs. Charlton and Mrs. Wardrope for their kindness in acting as judges of the fancy work, and on behalf of the whole asylum 1 beg to tender them our warmest thanks.

PATHOLOGICAL REPORT.

I append herewith a pathological report of seventeen cases which were the subject of critical research. I need not say that every case was interesting in revealing pathological conditions of great importance. The field is so inviting for this class of work and the material is so abundant that I trust every facility will be afforded us for prosecuting this important branch of science. I trust that before another year clapses a new mortuary with a pathological laboratory will be erected and equipped with every convenience for the prosecution of the work on the best scientific lines.

Religious Service.

Religious service has been held every Sabbath morning throughout the year. In summer the service is held in the grove, under the trees, and is very enjoyable. In winter the service is held in the amusement hall.

We are under renewed obligations to the Ministerial Association in the city, for their self-denying labors in ministering to our spiritual wants without money and without price. I trust they will be rewarded with a sense of duty in bringing comfort and consolation to many a desolate and yearning heart.

JUBILEE YEAR.

This Jubilee year of the reign of Her Majesty Queen Victoria marks an important epoch in the history of the British Empire. Never in the history of nations has such a long and uninterrupted reign of wisdom, integrity and womanly virtue been witnessed. Her benign example has reflected itself for good from the centre to the remotest part of the great Empire over which she rules, and has resulted in the strengthening of those great moral and social forces which make for "that righteousness which exalteth a nation." Her reign has also witnessed an impetus to commercial, industrial and scientific activity, which stands unrivalled in the world's history. Long may she live, and long may she reign to exemplify those resplendent graces of character which have endeared her to the hearts of her people.

Amid the general rejoicings throughout the Empire we were not unmindful, in our humble way, of our duty to the occasion. A huge bonfire was built on the asylum ground on the brow of the mountain, to celebrate the event. The buildings were gaily decorated with flags. Our patients were touched with the spirit of the occasion, and were pleasantly reminded that amid all their misfortunes they were still under the protecting agis of Queen Victoria and formed an integral part of that great Empire on which the sun never sets.

This jubilee year was also marked by two important events in the history of Canada, viz., the meeting of the British Association of Science in Toronto and the meeting of the British Medical Association in Montreal. Many of the intellectual savants of Britain. Europe and America were there, and their presence will no doubt do much to quicken scientific thought in our midst and broaden our mental horizon with a richer and fuller knowledge of the great mysteries of science which yet await development.

I had the honor of reading two papers before the British Medical Association at Montreal, and I considered it no small honor to have the privilege of presenting my feeble and unpretentious outpourings before such a learned and scientific body. It was with a good deal of diffidence and trepidation I ventured to respond to the invitation to submit anything before such a critical audience, but as Canadians I felt we had a duty to perform in convincing our British progenitors that we had not altogether lapsed into barbarism. As Canadians I am convinced we caught an inspiration from association with our British and foreign friends which will stimulate us to greater things in the future, for as "Iron sharpeneth iron, so a man sharpeneth the countenance of his friend."

Many of them visited our public institutions and travelled far and wide over our great Dominion and I have no doubt the knowledge and experience which they gathered of our country will do much to disseminate in the old land correct knowledge of the wonderful resources and future possibilities of our young country as a field for immigration and the investment of capital.

This year also marks the tenth year of my incumbency in office as the chief officer of this asylum. Looking back over these ten years which are all too short I note many changes. Our buildings and equipment have largely increased to meet the urgent demand for accommodation and the population has nearly doubled. I trust my administration of affairs has met with the approval of yourself, the Government and the people of which I am the humble servant, and if I have been instrumental in brightening the lives, and easing the burdens of the poor unfortunates placed under my care, I shall feel more than repaid for the days, weeks, months and years, of anxious responsibility which it cost me. To my fellow officers and employees who have stood faithfully and loyally by me in the discharge of trying and onerous duties and without whom no measure of success could have been reached I offer my warmest thanks: and to yourself as Inspector I express my gratitude for your praiseworthy efforts in sustaining my authority in the discharge of duty and for counsel and advice in settling many perplexing problems.

I have the honor to be, Sir,

Your obedient servant.

JAMES RUSSELL,

Medical Superintendent.

REPORT IN PATHOLOGY.

During the past year seventeen autopsies have been performed, and the following presents in tabulated form a few of the facts in regard to these examinations.

No. Sex Age Mental discuses. Duration. Anatomical Diagnosis, Terminal demen- 11 years . . . Extensive pleuritic adhesions. Emphysema. Macula alba on anterior surface of right ventricle. Aorta dilated and showing marked atheromatous degeneration. Left ventricle hypertrophied and anterior coronary atheromatous. Liver and spleen atrophied. Gall stone found embedded in anterior surface of right lobe of liver projecting about 2 mm, above the surface and surrounded by thick fibrous capsule. Gall bladder contracted and filled with gail stones. Chronic interstitial neybritis. 65 Chronic mania . . . 25 years Chronic pachymeningitis. Complete ossification of dura mater in frontal region. Convolutions somewhat atrophied. Small ancurism and dilation of left vertebral artery. Calcareous deposit in basilar artery. Membranes at the base opaque. cord removed and section made for microscope. Perihepatitis. Cardiac hypertrophy. Calcareous degeneration of aortic valves and coronary arteries. Chronic diffuse nephritis. 58 Chronic mania... 27 years Dura mater adherent to calvarium and brain surface. Convolutions atrophied. Extensive lymph deposits in frontal and motor Increased fluid in ventricles. regions. Pulmonary emphysema with pleuritic adhesions. Tubercular deposits at lower anterior of left lung. Atheromatous degeneration of aorta and coronaries. Atrophy of liver. Splenitis, organ being small and showing evidence of chronic inflammatory action. Torsion of intestine and abnormal distension of caecum. F | 56 Chronic mania . . 12 years . . . Cardiac, walls infiltrated with fatty deposit. Tricuspid contracted. Perihepatitis—gall stones. Torsion of intestine at junction of transverse and descending colon. Chronic diffuse nephritis. F | 60 Chronic mania. H months ... Pulmonary emphysema. Tubercular nodules,

length.

underg ing caseous degeneration. Adhesion

degeneration of cardiac valves. Perihepatitis. Liebermeister's furrows well marked on hepatic surface. Cyst in right ki ney, cortical substance contracted and sma'l cyst in right ovary. Duodenum twice normal

Atheromatous

of plema to pericardium

REPORT IN PATHOLOGY.—Continued.

No.	Sex. Age	Mental diseases.	Duration.	Anatomical Diagnosis.
81	F 38	Chronic mania	3 years	Omental hernia at ambilicus. Transverse colon dilated and bound down by firm adhesions to peritoneum. Purulent peritonitis with deep pyaemic cavity, pyogenic membrane, large quantity of pus. Intestines matted together by adhesions in tumor-like mass. Intestines firmly bound by adhesions to liver.
82	F 44	Terminal dementia.	2 ye us	Cerebral ramollissement involving lenticular nucleus and corresponding limb of internal capsule. Small cyst in corresponding position on opposite side. Abnormal formation of Rolandic area. Cardiac dilation. Tricuspid stenosis. Aortic valves atheromatous. Mitral Stenosis. Numerous infarcts in both lungs, kidneys and spleen. Perisplenitis. Congenital malformation and cyst of right kidney.
83	M 23	Dementia epilep- tica.	4 years	General cerebral atrophy. Calcareous deposits in bronchical glands. Intestines extensively bound by adhesions. Bezoar (1½ inches in diameter, 3 inches in length) filled lumen of small intestine. Appendix vermiformis adnormally small.
84	F 40	Terminal dementia.	11 years	Pachymeningitis. Arachnoid fluid increased. Pleuritic adhesions and extensive tuber- cular deposits in both lungs. Gastric dila- tion. Chronic diffuse nephritis.
85	F 56	Chronic mania	18 years	Lobular pneumonia. Right hung emphysematous with one well marked infarct. Excess of pericardial fluid. Gastric dilation. Left kidney contained several cysts and much purulent matter with several calculi in pelvis. Left ureter dilated and pus found in bladder.
86	F 75	Chronic mania	3 years	Sub-diaphragmatic at seess with extensive accumulation of purulent matter in abdomen and right thoracic cavity. Fibroid thickening of cerebral membranes with calcareous deposits at base. Perihepatic thickening. Gall stones. Right lung collapsed. Macula alba on anterior surface of cardiac wall. Aortic dilatation with atheroma. Fatty deposits in cardiac wall. Chronic interstitial nephritis.

REPORT IN PATHOLOGY.—Continued.

					· · · · · · · · · · · · · · · · · · ·
No.	Sex	Age	Mental discases.	Duration.	Anatomical Diagnosis.
87	F	40	Chronic mania	5 years	Thrombosis of cerebral sinuses—left lateral and superior longitudinal. Cerebral vessels distended. Universal haematoidin staining of cerebral substance. Left parietal convolutions flattened, and on section a large clot was found extending from ascending convolution backwards nearly to the posterior margin of the lobe. The clot extended in a vertical direction from near the superior margin down into the lateral ventricle, where softening of the tissue had already set in. The right hemisphere was firmer, and on section no hemorrhage was found, while the fluid was scanty in this lateral ventricle.
-88	F	6ã	Terminal dementia.	5 years	Arthritis catarrhalis. Left knee and both shoulder joints contained pus and articular surfaces were denuded and roughened. Pleuritic adhesions. Lungs ædematons and congested. Encapsulated calcareous nodule in upper lobe of right lung. Fatty deposits on cardiac wall, Heart cavities dilated. Atheromatous thickening of valves. Liver small, friable and bile stained. Gall bladder distended, marked chronic interstitial nephritis.
89	M	; 47	Chronic mania	23 years	General wasting of tissues. Hypostatic pulmonary congestion. Torsion of colon directly above sigmoid flexure, with marked dilation and evidence of gangrene.
90	M	43	Dementia epilep- tica,	17 years	Chronic pachymeningitis. Marked irregularity of convolutions. Gumma found at inner side of right lenticular nucleus and middle third. Numerous ulcers (specific) and old scars on extremities. Liver atrophied. Pleural adhesions. Fatty deposits on cardiac walls.
91	M	79	Terminal dementia.	36 years	Cardiae rupture. Pericardium was found greatly distended, about a pint of clotted blood and scrum being removed. Aorta was di ated, and a fibrinous band found on the free edge of posterior cusp of aortic valve. Near this was a small vegetation and several atheromatons patches in the aorta. Left ventricle was dilated to 3½ inches. Cardiae walls were thin and degenerated, and having the characteristic "faded-leaf color" of fatty degeneration. Atheroma of posterior coronary, with thrombus occluding that vessel.

REPORT IN PATHOLOGY.—Concluded.

No.	Sex.	Age	Mental diseases.	Duration.	Anatomical Diagnosis.
92	M	28	Delusional mania.	2 years	joint. Ilium had double fracture each centring in acetabulum, considerable displacement, extensive effusion of dark blood throughout lower portion of abdominal parietes, particularly in front of anterior pelvic region and about bladder. Elbow dislocated, both bones backwards. Outer condyle of humerus crushed. Fracture of coronoid process of ulna and splintering of shaft below. Anterior half of head of radius was broken into several fragments.
93	F	7ti	Terminal demen- tia.	9 years	Injuries result of fall from building. Hemorrhage into pons extending into floor of fourth ventricle, where large clot was found. Several small uterine fibroids (extra mural) with evidence of atrophy in the same.

In more than one-third of the year's autopsies a more or less marked condition of pachymeningitis was found. These cases were all of a chronic form and the condition was associated with a noticeable atrophy of the convolutions. Case No. 77 was remarkable in this respect. The dura mater in the entire frontal region was ossified and seemingly amalgamated with the inner plate of the skull which over this region was correspondingly thickened, presenting a wrinkled and uneven surface,

The cardiac lesions in No. 82, possess peculiar interest, particularly in reference to the tricuspid stenosis. This often dates from feetal life and the lesion in this case was evidently an old one, but the clinical history suggested that it was an acquired condition. The cusps were joined so as to admit but one finger instead of three. The mitral stenosis was well marked, admitting only the tip of the little finger. The segments of the aortic valve were strikingly atheromatous. The clinical records of this case furnish a history of an apopleptic seizure three or four years previous to the attack which proved fatal. In the former attack, however, the paralysis was on the opposite side of the body and may be accounted for by the remnant of the old lesion, a small cyst, noted above.

The death of No. 91 was as the autopsy fully accounted for, most sudden. He was the first person admitted to this asylum. While standing in the diningroom after breakfast, he was seen to fall over and death was immediate. The extreme rarity of cardiac rupture at the particular site noted above rendered the post-mortem extremely interesting.

Post-mortem No. 92 was of special interest in that the lesion was associated with, and the location (pons) of the hemorrhage indicated by, marked paralysis of the left side of the face, and a spastic paralysis of the right arm and leg from involvement of the pyramidal tract. The lesion, being below the line of Gubler, produced "cross paralysis of the seventh nerve and body type," the face being

paralysed upon the same side as the lesion, while a marked hemiplegia was developed on the opposite side. The clinical history of this case was somewhat unusual. The paralysis was first noticed on a Tuesday morning, and the patient, although at that time comatose, lived until the following Friday evening. Hemorrhage into the pons most frequently terminates fatally in much shorter time so that the duration also renders this case worthy of note.

Pleuritic adhesions of greater or less extent were found in about one half of our autopsies. These adhesions were sometimes very extensive and accompanying in some instances marked degeneration of lung tissue. Our experience is a repetition of others in asylum practice as to the frequent absence of cough and the other usual symptoms of pulmonary irritation in cases where even extensive tubercular lesions are found.

In this report last year's attention was directed to the common occurence of lesions of the kidney in our autopsies. The extreme frequency with which chronic diffuse nephritis is detected amongst those dying insane, forbids the supposition of a mere accidental relationship, but rather suggests what several observers have pointed out that there is probably some pathological connection between this condition and certain toxic elements possessing some causative relation to insanity. Several observers have drawn attention to the frequent association of chronic nephritis with paresis, and have considered the probability of paretic and uraemic convulsions being due to the same toxic element. Our limited experience, however, has been that evidence of chronic renal disease is also often found associated with forms of insanity not marked with paretic symptoms.

ANNUAL STATISTICAL REPORT

Of the operations of the Asylum for the Insane, Hamilton, for the year ending 30th September, 1897.

ANNUAL REPORT OF THE MEDICAL SUPERINTENDENT OF THE ASYLUM FOR THE INSANE, MIMICO, FOR THE YEAR ENDED SEPTEMBER 30th, 1897.

To Robert Christie, Esq., Inspector of Asylums, Toronto, Out.

Sir,—In accordance with the requirement of the statute, I have the honor to submit the third annual report of this Asylum for the year ending September 30th, 1897.

There were in residence on October 1st. 1896	Male. 300	1 emale. 298	Total.
Admitted during the year by warrant	18 20 38	1 ± ;;;; 47	32 53 86
Total number under treatment during year	338	345	683
Discharged during the year recoveredimproved	21 1	13	34 1
Total number discharged during year. " " died during year. " " cloped during year. " transferred during year	22 18 1	13 17 20	35 35 1 20
Total number leaving institution during year	41	50	91
Remaining in residence 30th September, 1897	297	295	592

Admissions.

During the official year there were 85 patients admitted to this Asylum and of this number 24 were reported to have been insane over one year: from this it will be seen that the number suffering from acute mental disease at the time of admission was only 61. Of these 85 patients, 32 were admitted by Lieutenant-Governor's Warrant showing them to have been residents of some gaol temporarily before admission to the Asylum: the misfortune to the patient of having to be committed first to gaol for safe keeping seems unavoidable in the large territorial districts, and if some means of more speedy admission to the Asylums, of the acute cases were devised, their chances of recovery would be somewhat improved.

DISCHARGES.

The number of discharges was rather larger than last year, amounting to 35 compared with 26, but the number must vary from year to year according to the character of those admitted. Computed on the basis of the acute admissions for the year, the percentage of discharges would amount to .57, but even the so called acute admissions are a very uncertain quantity. It may happen that a

large percentage of the admissions which from their history papers might properly be called acute, would in reality turn out to be cases of general paresis, or epileptic or delusional insanity, and of course the percentage of discharges in such cases would be very small.

DEATHS.

The number of deaths exactly equalled the number of discharges, namely 35, and of this number 5 were over 60 years of age, 6 were over 70, 3 were over 80 and one had celebrated his 90th birthday, thus showing that a large proportion had reached the average duration of life. The mortality rate computed on the total number under treatment was slightly over 5 per cent.; phthis was the cause of death in about 25 per cent. of the whole number.

WATER SUPPLY.

The provision of a duplicate pump at the pumping-station last year has made the plant for supplying the water to the Institution complete and as far as quantity is concerned there is now a sense of security which has never before been experienced: in the matter of quality too, the new well which is now under construction at the pumping-station by the Public Works department, will supply it in the highest degree of purity it is possible to attain. Before beginning this well Mr. C. G. Horetzky under whose immediate supervision it is being sunk, constructed a model and established beyond all cavil, by experiment, the principle that under the gravitation system about to be introduced, local contaminated water would not enter defective joints in the intake pipe in anything like the same quantity which would enter it under the suction method which has heretofore been the one in operation.

It is proposed to place a valve in the old pipe near the junction of the new one and allow all the connections with the old pipe under the wharf to remain undisturbed, thus providing an auxiliary pipe so that in the event of any necessary repairs in the future to the inner end of the new pipe, the old one may be temporarily used and an uninterrupted supply of water may be maintained.

Disposal of Sewage.

The one greatest need of this Institution at the present time is some land for garden purposes and for the land disposal of sewage. During the past three years the inefficiency of the present sewage system has been repeatedly pointed out, and in the past two annual reports the reasons for its inadequacy have been submitted and a better system recommended. Filtration tanks cannot be satisfactorily operated when the sewage contains soapy water because the saponaceous particles congregate on the surface of the filter and thus prevent the percolation of the liquids: on this account about 250,000 gallons of sewage have to be imptied every week into the lake which is the source of the water supply to the Institution. Only during the present week the Medical Health Officer of the city of Toronto has taken a determined stand against a trunk sewer on the ground that it would lead to the pollution of the source of the water supply, and surely when so distinguished a sanitarian as Dr. Sheard lucidly enunciates the reasons for this conclusion, the practical application of the principle can no longer be safely ignored by any public institution. Now that the defects in the water supply system have been remedied the heretofore impending danger of pollution through defective joints in the pipes will not in future exist, but the turning out of this large amount of valuable sewage into the lake when it might be utilized upon the land is an indefensible waste. If a suitable piece of land were acquired a sewage farm could gradually be established by the labor of the patients and thus provision would be made for the natural land disposal of all this sewage which is now lost. The transformation of the land into a sewage farm would itself afford healthful occupation to large numbers of the male patients and the farm would afterwards yield a rich return of vegetables and fruits for all the labor expended upon it.

GARDEN AND GROUNDS.

The steady improvement in the condition of the grounds is an unmistakable evidence of the untiring skill and application of Mr. Matheson, the gardner. During the past year he has accomplished an enormous amount of grading immediately on the east of the cottages and on the south of the ravine and also on the south of the cottages around the amusement ground where he has also completed an excellent road, a little over a quarter of a mile in extent; this grading was a pre-requisite to tree planting of which so little has heretofore been done. One of the most noticable changes made in the grounds was effected by moving the sidewalks farther out from the cottages to the outer edge of the boulevard thus allowing sufficient space between them and the cottages for flower beds.

The yield of fruits and vegetables has been large in proportion to the area of ground cultivated but the acreage of the garden could profitably be increased threefold. No sort of manual labor is so beneficial and so curative to male patients as working on the grounds among the flowers and shrubs or in the garden rearing vegetables and fruits. The farm itself is too far removed by distance for the employment of patients who are living there, and the only mental salvation for the men at the cottages so far as can at present be seen is to acquire some additional land adjoining the Asylum property so that a larger sphere of garden usefulness may be opened up to them. This land can now be acquired at a reasonable price (\$100 per acre) and it would after improving it, in a few years become worth more to the country as a provincial asset than the money expended upon it in the purchase.

FARM.

The farmer Mr. Boulton and his assitants have pursued the work at the farm with their usual vigor and the result of their work has been eminently satisfactory as you will learn from the accompanying return. The success which has attended Mr. Boulton's efforts in the growth and use of ensilage is an achievement of which any farmer however well situated, might justly feel proud. Last year by means of its use the cost of the milk used in the Institution was one and one-half cents per quart and this present year it is even a little lower, namely, one and three-eighth cents per quart; from the closest observation of his methods it would however seem impossible that the cost of this most necessary article of diet can be brought below this surprisingly low figure.

CARPENTER'S DEPARTMENT.

In every new Institution there is almost an endless array of constructive work for a carpenter and if the artizan be a competent man his services are of the greatest permanent consequence to the Institution. The character and amount of the work which has been performed by Mr. Dyer and his staff during

the past three years at this place clearly establish his claim to a more equitable monetary recognition of his services by the Government: although I have frequently made this recommendation to you officially, I now make it in this more public manner in the earnest hope that he will no longer be passed over.

Early in the spring the side-walk in front of the cottages for men and also along the front of the administration building and the two front cottages for women, in all over 500 yards was taken up and moved beyond the boulevard, thus greatly enlarging the lawn space between the cottages and the walk. Much needed repairs and alterations were made in the houses of the gardener, mason, assistant farmer and engineer at the pumping station; sofas, screens and cupboards were made for the cottages and numberless repairs and additions were made in various parts of the Institution.

Early in the year two rooms in each of the attics of cottages I. and A. were fitted up for the night watches who formerly slept or tried to sleep in dormitories immediately adjacent the halls in these cottages. Although the outlay for making these four rooms including the iron stairs to them was small, the comfort and convenience not only of the night attendants but also in the day use of these cottages have been greatly increased.

During the whole year too the carpenter has borne on his shoulders the responsibility of carrying on the Institution labor in connection with the building of the new store, chapel and assembly hall, always of course under the direction of the Public Works Department. So far all the carpenter's work has been done by Institution labor and Mr. Dyer proposes to finish the whole structure without any hired help.

ENGINEER'S DEPARTMENT.

The duplicate pump at the pumping station, the auxiliary dynamo, and the ash elevator and sifter have constituted the most important additions in Mr. Gourlay's department. Along with the placing of the auxiliary dynamo the alterations in the dynamo room were extensive and required patient and persistent work to accomplish them. The electric plant for the incandescent lamps which are used in lighting all the buildings is now complete, and without an accident should meet the requirements for years to come. The old Ball machine which supplies the nine or ten are lamps for lighting outside is, however, very imperfect and inadequate, and should soon be supplanted by a larger and better machine.

The ash sifter and elevator which is now in daily operation not only saves the patient men from earrying the ashes out of the boiler house by hand, but the sifter has saved many tons of coal siftings which were formerly lost with the ashes. Mr. Gourlay estimates that this sifter will save coal enough from the ashes in one year to heat the new building for the stores and assembly hall.

MASON'S DEPARTMENT.

There has been so much work for Mr. Watson in the construction of the new building that he has had very little time to spend on interior repairs in the cottages or upon the subways; even yet the plastering of the walls and putting down the cement floors will occupy him and his assistants for several months.

PAINTERS' DEPARTMENT.

Mr. Hoey and his assistants have painted the verandahs of all the cottages during the past summer and thus preserved them from exposure and decay. He has also painted the interior of the houses of the gardener, mason, assistant

farmer and engineer at the pumping station, all of which had remained untouched since their construction. He has done a large amount of glazing for the green house and he has painted and glazed the windows for the new building: Altogether the painter has had a busy year and the work he has done is of great value to the institution.

TAILORING DEPARTMENT.

The work in this department under the supervision of Mrs. Reddick, has gone on satisfactorily during the past year and the clothing for the male patients has improved somewhat in character and appearence by reason of the greater variety in the patterns of the tweed used, and also because of adopting the system of having the patients measured and fitted instead of having the clothing made in certain given sizes as formerly. This plan involves a great deal more labor and care on the part of the tailoress but there is a greater interest taken by each patient in his clothing when he can select the patterns himself and have his measure taken purposely for it, than when a poorly fitted suit is handed to him without having any previous knowledge of it. This increased interest results in greater personal care of his clothing by the patient and it consequently serves him a longer time.

BAKERS' DEPARTMENT.

Mr. George Dee has had charge of this department for several years and the daily average out-put of bread is 180 loaves, and the quality of the bread is everything that could be desired. That this amount of excellent bread besides other special baking at various seasons should be turned out by one baker and his patient assistants is of itself a tribute to his industry and skill.

SHOE-MAKERS DEPARTMENT.

During several years past Mr. James Aldridge has been steadily making and repairing the boots and shoes for the men and women of this asylum; the timely repairing of boots and shoes saves many dollars annually in the outlay for footgear, and though quietly carried on, the faithful work done in this department by the shoe-maker and his staff of patients is of equal importance to that which is done in any other industrial quarter.

HOT WATER HEATING OF COTTAGES 5 AND E.

Next in necessity to the provision of land for garden and sewage purposes is some measure for adequately heating cottages 5 and E. On each side, male and female, there is a chain of three cottages heated from one main steam pipe, but for the purpose of illustration I shall refer only to the female side of the institution. The main steam pipe from the boiler house is six inches in diameter and as it passes behind cottage 3 this six inch pipe is divided into two four-inch pipes—one going into cottage 3 to supply it with steam and the other extending down the subway to a point behind cottage 4, where it again subdivides, this time however sending out two branches each as large as itself, and sending one four-inch branch into the cottage to heat it, and continuing another four-inch

pipe onward to cottage 5, theoretically to supply it with steam. You will thus see that a four-inch volume of steam is required at this point to fill two four-inch pipes which of course is impossible: the consequence is that in order to force any adequate volume of steam into the pipe supplying cottage 5, cottages 3 and 4 have to be over-heated and this occasions waste of coal. Generally however it happens that cottages 3 and 4 are only comfortably heated and cottage 5 only receives a small proportion of the heat which its inmates require.

To overcome this structural defect the engineer has proposed to cut off the steam main at the rear of cottage 4, and heat cottage 5 with hot water; this could be done for about \$500, and half this outlay would probably be saved the first year, besides securing a proper supply of heat where it is so greatly needed.

PUBLIC WORKS DEPARTMENT.

The chief works undertaken during the past and present year by this department were the placing of a duplicate pump in the pumping station, the addition of an auxiliary dynamo to the electric plant, the sinking of a well at the pumping station for a gravity water supply, and the building of the chapel, store and assembly hall. The latter work has been carried on as far as possible by patients' labor, and though in this way the construction has not been rapidly pushed forward, the amount of valuable labor contributed by the artizans and patients will total up a very large item of saving in cost to the Government, besides the advantage afforded by the occupation to the imnates. Although building in this way involves a great deal of extra worry to the Medical Superintendent and extra labor to the artizans, still the saving to the country in cash and the benefits of employment to the patients more than counterbalances these considerations.

Under this department also the roofs and down pipes of all the cottages and other buildings which have so long required attention have lately been thoroughly repaired and the damage to these buildings which was annually taking place has now happily been checked.

AMUSEMENTS.

The winter amusements were limited to skating, sleigh-riding, weekly dances and such indoor games as may be played in the cottages. Until last winter the patients' dances could only be arranged for them every fortnight on account of the expense of the music, but last winter for the first time the music for these dances was supplied by the Asylum orchestra under the leadership of Dr. Barber and not only was the music better for dancing than was ever before supplied, but besides being more frequently provided, the cost of it was much less than formerly.

In the summer besides the tennis and croquet for the women, during the later part of the season a cricket club was organized for the men and matches were played every Saturday afternoon between sides made up of patients and employees: to the success and interest of these matches Dr. Wilson contributed much by his example and co-operation.

SUNDAY SERVICES.

The three local dergymen Rev. Mr. Tremayne, Rev. Mr. Hamilton and Rev. Mr. Caldwell have continued cheerfully to conduct the services on Sabbath mornings during the year, and the thanks of the entire body of Asylum residents patients, officers and employees are due these gentlemen for their ministrations. Thanks are also due to Rev. Father Cherrier and Rev. Father LaMarsh who have visited and ministered to those of the Roman Catholic faith from time to time.

OFFICERS AND EMPLOYEES.

There have been no changes among the officers during the past year and comparatively few changes among the employees, and it is my privilege to again advise you that the interest and devotion of the staff in general has been such as to command my unqualified admiration and commendation.

I have the honor to be, sir,

Your obedient servant,

N. H. BEEMER

ANNUAL REPORT OF THE MEDICAL SUPERINTENDENT OF THE ASYLUM FOR INSANE, BROCKVILLE, FOR THE YEAR ENDING SEPTEMBER 30th, 1897.

ROBERT CHRISTIE, ESQ.,

Inspector of Asylums, Teronto, Ontario:

SIR,—I have the honor to submit herewith, the third annual report of the operations of this Asylum for the year ending September 30th, 1897.

The following table shows the movement of our population:-

Patients in residence October 1st, 1896	Male. 151 142	Female. 146 85	Total. 297 227
Total number under treatment	293	231	524
Discharged recovered. " improved	1	Female, 17 8 1	Total. 30 9 4
Total discharged	17	26	43
DiedEloped	Male. 17 2	Female.	Total, 28 2
Remaining in residence September 30th, 1897 Average daily population	$\frac{257}{205}$	194 181	451 386

Admissions.

Of the admissions during the year 120 were of the chronic class, transferred from the other Provincial asylums. The direct admissions aggregate 127 and of this number 23 had previously been inmates of asylums, so that the aggregate of first commitments was 84. Of this latter number, 12 were over 70 years of age and were suffering from senility, and were consequently subjects for home care—not hospital treatment. Too many people use the asylums as an easy means of riding themselves of relatives who, becoming mentally enfeebled by age, are regarded as a burden and foisted upon the Government for care and protection. In this way proper hospital patients are crowded out and the chances for their recovery made more remote.

At present no further vacancies exist for males, but one cottage for females is still unoccupied.

DISCHARGES.

There were 43 patients discharged, 30 of whom had recovered and 4 were improved. The percentage of recoveries on the total number admitted is 14, but as over 50 per cent of the total admissions were incurable if seems absurd to base a percentage of recoveries upon these figures. The recoveries on the direct admissions were over 30 per cent.

DEATHS.

Twenty-eight deaths occurred during the year being 5.3 per cent. on the total population. Of the twenty-eight who died, ten were over 60 years of age.

MAINTENANCE.

The total expenditure on maintenance account, which includes medicine and medical comforts, butcher's meat, flour butter, groceries, vegetables, fruit, bedding, clothing and shoes, fuel, gas, furniture and furnishings, repairs and alterations, soap, postage and stationery, water, salaries, etc., amounted to \$55,407. Our average population having been 386, the weekly cost per patient was \$2.76, the annual cost being \$143.54.

TREATMENT.

The treatment of cerebral ailments may broadly be divided into two classes, viz: the medical treatment by which drugs or operative interference are called into requisition, and the moral or general treatment. These divisions coincide with the methods of procedure in other physical ailments, which indeed are further analogous to cerebral disorders in having the acute and convalescent stages, besides the chronic, which has the same signification relatively in the one as in the other. When a chronic state of disorder develops in connection with either the brain or any other organ, complete recovery is not looked for, although much can be done towards ameliorating the condition of the patient; but it is upon the acute or ultimately curable cases that the interest of the alienist, as well as that of his confréres in general practice, centres.

Upon the admission of a patient to the Asylum, he is made the subject of a sort of preliminary study, which has for its object the individualization, so to speak, of the patient, as well as the location of the physical cause of his mental aberration. For insanity has come to be recognized, not as something super, or rather sub-natural, but a disorder simply of the brain, resulting from a morbid condition of some part of the physical apparatus. All the organs of the body are intimately related to the brain by means of nervous communication, and affect in greater or less degree its function as an organ of mind. Our text being therefore, mens sana in corpore sano, it behooves us to begin our treatment of the mind through the medium of the body.

While drugs and operative interference play an important part in the work of restoring the brain to its normal psychical functions, moral treatment, we find, is more frequently indicated. This consists of rest, feeding, occupation, exercise, study in a mild sense, amusements, etc. We find that the majority of cases entering our asylums require rest as complete and undisturbed as can be indulged in by the depressed melancholic, or the excited maniac. Many cases of insanity are the result of loss of sleep, caused by the multiplicity of duties, business or domestic worries, etc., and the system should be built up in the part where the vitality has been sapped—hence the necessity for rest.

Concurrently with rest as a twin factor at this stage, dieting is observed, and with the second or convalescent period, occupation is prescribed, and it is safe to say that none of the agents in mental treatment are more potent than this, beneficially influencing, as it does in so many ways, the mental convalescent, With the assumption of duties, be they never so light, a satisfactory sense of usefulness returns to the patient, and there seems to be something in life to live for. Besides this, the wandering thought is unconsciously concentrated, and useful ideas crowd

out the delusions. Almost any kind of occupation is beneficial if indulged in Work out doors is beneficial, but if not possible, out of door with moderation. exercise and games should form part of the daily regime. In very few cases should idleness be permitted, as it is just as productive of evil among the insane as among others. Our male population are engaged upon the farm, in the garden, in the engineer department, the carpenter's department, the tailor shop and in the kitchen, and the women are divided between the laundry, the sewing room and the respective wards and cottages. But, though the majority of our population are able to share in the general work of the institution, and would be more contented and happy were they allowed to indulge in useful activity, we unfortunately have not the facilities for varying the character of the work as much as we would like, nor is it always possible to provide occupation for the many To allow individual talent or inclinations to have their bent, more nurses and attendants would be required, and properly equipped workshops would be necessary in the case of the men. As regards the women, the majority of them having been accustomed to domestic duties, the sedentary employment we have at our command is not exactly congenial, and were a number of stationary washtubs placed in the laundry, the female labor might be utilized in the washing of flannels and fabrics which are injured by the steam process.

Religious Services.

Our people have been assiduously attended to in spiritual matters by the clergymen of the different denominations. Services are held for Protestants every Sunday at 9 a. m., and Mass is celebrated for the Catholics the first Monday of every month.

ENTERTAINMENTS.

The choirs of the several churches of Brockville and several of the musical societies have our thanks for entertainments given during the year. The band of the 42nd Battalion under the leadership of Mr. Stinson favored us with two open air concerts, and delighted officers and patients alike with the selections rendered in such fine form.

The two eminent artists, Messrs. Watkin Mills, baritone, and George Fox, violinist, stepped as it were out of the path of public patronage and adulation, and gave of their great talents to our afflicted family.

The fortnightly dance, for which our own orchestra furnished the music, implies a bi-monthly treat for the patients during the winter season.

"At homes" are held weekly and are always well patronized.

The sleigh rides in the winter are not by any means the least enjoyed of the pleasures we are able to give our female patients. Well wrapped up in hoods and shawls they depart with the zest of little children, and cannot fail to benefit by "breasting the keen air" under comfortable circumstances.

Farm.

The yield of the farm has been very good, the crops, which consisted ohiefly of roots and corn, having been rather above the average.

A considerable amount of under draining was done during the summer, and the boulders and stones cleared from several acres of ground. In this work patient labor though necessarily intermittent and apparently meagre in daily results, proved the truth of how much can be finally accomplished by repeated efforts. The largest stones were utilized as the substratum of the new road-way.

Altogether, Mr. McCrimmon has ample cause to congratulate himself on the results of the years work.

The following is a table showing the yield of the farm:-

Potatoes	2,000 bushels.
Mangolds	750 "
Turnips	1,000
Oats	200 "
Hay	5 tons.
Ensilage	100 "
Milk	19,428 gallons.
Pork	24,341 Ibs.

GARDEN.

The list of garden produce is as follows:—

T)	73 bushels.
Beans	94 bunches.
Beets	23 bushels.
Beets	
	817 doz., (green).
Corn	15 tons, (fodder).
Corn	38 lbs , (seed).
Otto Stage The First Stage Sta	2,718 heads.
0110015	3,000 plants.
Cauliflower	450 heads.
Cauliflower	500 plants.
Carrots	167 bunches.
Carrots	190 bushels.
Cucumbers	131 dozen.
Chard	8 bushels.
Celery	6 0 0 heads.
Celery	$600 ext{ plants}.$
Cress	130 bunches.
Flowers	700 annuals from hot bed
Geraniums, potted, 4 in	3 dozen.
Lettuce	1,353 heads.
130001100	1,364 bunches.
Onions	113 bushels.
Peas	14 "
Parsnips	50 "
Parsley	25 bunches.
Radishes	730 "
	1.100 "
Squash	200
Salsity	6 bushels.
Strawberries	28 boxes.
Sage and Summer Savory	58 bunches.
Tomatoes	100 bushels.
Turnips	36 bushels.
Tomato plants	600
Tomato piants	000

The above list represents a quantity of vegetables which furnish a most conclusive proof of Mr. Richards splendid work during the two years that he

has had charge of the garden. The land was of the roughest when he assumed charge, and nothing but an extra amount of interest allied to personal labor has placed it in its present advanced condition.

Besides the cultivation of vegetables, the gardener has charge of the ornamental grounds and roads, and has had considerable work done to both. The ground immediately in front of the buildings, having been levelled last year, was seeded this spring and now forms a beautiful and spacious lawn.

The main roadway is now considerably under way, and it seems almost a stupendous undertaking when Mr. Richards' resources are taken into consideration. The road-bed was first excavated to a depth of eighteen inches, and large stones and boulders used as a foundation, covered by a layer of refuse stone which was drawn from the old quarry, and broken by the patients with stone-hammers. This, when covered, as is the intention, with cinders and gravel, will form a practically permanent roadway.

WANTS.

On account of the exposed position of the buildings, situated as they are on the highest point in the vicinity, storm sashes should be furnished for the north and west windows of the cottages and main building. Although the heating plant is all that could be desired, it is not possible to keep the sitting-rooms and halls at a comfortable temperature without running the boilers at an extremely high pressure.

An addition is necessary for the carpenter shop, as on account of its present size, lumber cannot be stored in it, and the work cannot be comfortably carried on owing to the limited space.

It is now time that the asylum grounds should be respectably enclosed, at least on the Prescott or main road. There exists at present a sample of about every kind of fencing, from the time-dishonoured rail and boulder enclosure, to the cheap and nasty wire fence. The idea which suggested the use of the last had no connection, of course, with cloping patients, but a wire fence surrounding the grounds of an insane hospital is an anomaly to say the least. If the material for a proper fence were supplied, it could be erected by patient labor.

Until a green-house is given us, our grounds will be lacking in respect of flowers. The possession of a green-house would mean even more for us than the cultivation and propagation of flowers and plants, as there are a great many patients who would find congenial employment in floriculture. I trust that next year will see us even partially equipped in this department.

A suitable house for the storage of vegetables is an evident necessity.

A large number of our patients are constantly making requests for reading-matter, and that they would be benefitted by suitable literature goes without saying, and I therefore hope that a grant may be made for the purchase of two-or three hundred books, as a start towards a library.

A valve-reseating machine should be supplied in the Engineer's department. Under existing circumstances valves have to be sent outside for repairs or discarded altogether.

A shoemaker should be added to the staff as, besides the additional resources in the way of employment for the males, it is desirable from an economical standpoint.

An appropriation should be made for the purchase of ornamental trees and shrubs.

The interior walls of the halls have been painted and decorated, and of course, their appearance would be greatly enhanced by the addition of pictures. The painting has all been done by the patients under the direction of attendants.

A house should be built on the asylum premises for the gardener, who, at present, lives nearly a mile from his work. This is a hardship in many ways, and I trust that next year he will be more comfortably situated.

The houses occupied by the engineer and farmer would be much more comfortable by the addition of storm sashes, as both dwellings are in a very exposed situation. This situation, likewise, renders a porch or verandah necessary to anything like comfort in summer, as, there being no shade trees in the immediate vicinity, the houses have the questionable benefit of the sun's rays all day long.

The necessity still exists for a second assistant physician, and with our increase of populatson becomes more emphatic.

THE STAFF.

The staff remains the same as last year. I have to thank all who, by assiduity, earnestness, and good will, labored towards making his or her part a satisfactory fraction of the year's work.

Your obedient servant,

J. B. MURPHY,

Medical Superintendent.

ANNUAL STATISTICAL REPORT

Of the operations of the Asylum for the Insane, Brockville, for the year ending 30th September, 1897.

ANNUAL REPORT OF THE ASYLUM FOR IDIOTS, ORILLIA, FOR THE YEAR ENDING SEPTEMBER 30th, 1897.

To James Noxon, Esq., Inspector of Asylums, Toronto:

Sir,—I beg to submit herewith the twenty-first annual report of the operations of this asylum, being for the year ending 30th Sept., 1897.

We began the year with 605 immates, 332 males and 273 females, and there have been admitted during the year 38 males and 46 females, making in all 84. There were discharged during the year 4 males and 4 females, two of each sex being much improved by their residence here, the other 4 were not improved owing to the short time they remained.

Of the 51 who died, 22 were males and 29 females, making a percentage of 7.34 as compared with 6.47 last year.

It is worthy of remark that more females than males were admitted this year, which has not occurred before in the history of the institution. One reason for this is that we had room for the latter, while accommodation for males had been exhausted for some time.

Applications

I am compelled to call attention to the large number of applications on file, many of these claims are being argently pressed by friends and municipal authorities. There are to-day 139, of whom 92 are males and 47 females.

There are two or three plans by which accommodation could be provided for those who are seeking admission. One, and in my judgment the best and most feasible, is to make separate provision for the epileptics, of whom we have 130. This plan I have urged many times before in my reports, and at the risk of being considered a crank on this question, I venture to so again. One thing is certain, we cannot long resist the demands of the public for increased facilities for caring for idiots and imbeciles. It is unfair to those who are unable to get relief. Nothing is more sad than a poor family with one, two or three idiot children. It takes the whole time and attention of the mother to look after and care for them, and the knowledge that others have been relieved only makes them feel that they are being discriminated against. Separate provision is being made for epileptics in many of the American States as well as in Europe, and Ontario cannot afford to lag behind if she is to maintain the proud position already attained in caring for those who are unable to care for themselves. Another method for meeting the demands of applicants would be to erect two cottages, which need not be expensive, where the useless men and women could be housed and cared for at a minimum expense. And a third plan would be to purchase farm land and erect a farm house which would accommodate forty or fifty working patients; this plan I recommended last year. In conjunction with the latter, a house should be built for the medical superintendent, turning that portion now occupied by him into the institution, which would provide for at least forty children. Either of these plans would meet the present demand, and I cannot urge too strongly the advisability of taking steps towards carrying one of them out ere long.

[237]

IMPROVEMENTS.

The only improvements, if we except work on park and roads, during the year was the completion of the improved heating system, which was commenced last year. There is no doubt about the wisdom of the change, whether we consider it from an economical point of view, or from a sanitary. The heat and fresh air are more evenly distributed, and the result is an entire absence of foul smells, which are almost unavoidable in public institutions, during the cold season.

The new system requires less fuel than the old, which will considerably reduce the expenditure on maintenance. As, however, we have not given it a fair trial for a full season, the exact reduction cannot yet be given. The fact, however, that it will cost considerably less, and that it is a more perfect system, being up to date, cannot be gainsaid.

Wants.

Two years ago I recommended that additional stable room should be provided for our cows, the present building being altogether too small: and as our population has increased we have a scarcity of milk. With nearly three hundred children of all ages, milk should form the principal part of their dietary. For the past year we have not had anything like a sufficient quantity; it should be increased by nearly one-third, but with our present stable room this cannot be done.

Last year a start was made under the direction of Mr. Christie to supply this want; and I asked for a few hundred dollars to complete the stable and silo, which had been commenced, but for some reason, unknown to me, the money was not granted. I beg to call your attention to the matter now, with the hope that more favorable consideration will be given to it at the coming session of the Legislature.

We can now house 19 cows, and we should have, at least, 26 to meet our wants.

COAL VAULTS.

The inconvenience of the present storage for coal is more marked now that we burn screenings instead of large egg coal, with a larger percentage of loss. Handling those screenings so often pulverizes them so much that they present the appearance of coal dust.

Properly constructed vaults adjacent to the boiler house would pay for construction in a few years, besides obviating the necessity of keeping a team and gang of men practically hauling the most of the winter. I know that you recognize the advantages in saving that coal vaults would insure, and leave the matter in your hands, with the expectation that another year will not pass without securing them.

ELECTRIC LIGHT.

More than once I have suggested the propriety of lighting our buildings with electric light. It would be an act of prudence to do so; for undoubtedly there is great danger from the use of gas, as a conflagration might be started at any time.

We have so many mischievous and irresponsible boys, that the utmost vigilance has to be exercised to prevent an accident of this kind. For instance, on two occasions gasaliers have been torn down by epileptic lunatics, and on another

occasion a boy was caught lighting a corn scrubbing brush, which he threw into a sink when discovered. These are instances of the danger from gas.

Installing electric light would not be very expensive, say five or six thousand dollars: this sum certainly should be easily obtained.

EMPLOYEES HOUSES.

At least two more cottages should be erected for employees. As our population increases the staff of employees necessarily increases with it, and it is exceedingly inconvenient to have important officers and employees living in town to or three miles away. Indeed, simple prudence would demand that every one connected with the institution should be within immediate call in case their services might be required at any time, or in case of an emergency.

PAINTING.

Nearly all the outside woodwork, especially of the cottages, requires painting. In many places the paint has entirely disappeared, and the wood is exposed to the weather. Another year should not be allowed to pass without having this work done, and I would suggest that an appropriation be asked for this purpose.

THE SCHOOLS.

The schools have made faily good progress during the year although much more satisfactory results could be obtained with an increased staff of teachers. With nearly two hundred children, scores of whom were sent here for the express purpose of being trained and educated, we cannot expect anything like the progress that a full staff of teachers and instructors would accomplish.

We have only seven teachers, although provision has been made for eight. Owing to Miss Christie's resignation the position of principal has been vacant for more than a year. There should be twelve teachers instead of seven, for no person can do justice to more than twenty of our higher grade pupils. While twelve of the lower grade would be ample for one teacher.

We have seventy children in the wards, for whom absolutely nothing is being done in the way of systematic training.

Trades instructors are also required, and unless we obtain these, we will assuredly fail in the chief object had in view when this work was organized. Boys are growing up, who have acquired as much elementary education as will be of practical use to them, or as their limited abilities will permit them to obtain, and they should be set to learn some useful trade, or handicraft, whereby, in many cases, they might be enabled to go out into the world and maintain themselves and in others to make articles which are needed in our own and other public institutions which now have to be purchased. Surely it is not necessary to enlarge on this question; every like institution in the world makes manual training an important feature in teaching. We are kept where the older institutions of America and Europe were thirty years ago. It would seem as if the work was still looked upon as an experiment in this province. It has long since passed this stage and it is acknowledged by eminent men, in every walk of life, where such institutions exist, to be the duty of the State to make the most ample provision for the training of idiots, and the improvement of their sad condition. It is just as incumbent to train them, and to teach them simple and useful trades, as either the deaf and dumb, or the blind.

VISITORS.

In July last the Association of Officers of American Institutions for Feeble-minded Persons met at this institution, there being a large representation from various States present. The meetings were not only pleasant, but exceedingly profitable. Questions relating to the care and training of the feeble-minded, and the best methods for bringing the claims of this unfortunate class before the respective governments were discussed and passed upon. The causes that lead up to this degeneracy in the race, and the best methods to be pursued to lessen the evil also received attention.

These meetings are a great help to those engaged in the care and betterment of the idiot: more especially when held in the different institutions, where systems can be studied and compared.

The delegates expressed themselves as well pleased with all they saw here.

The county council of the county of Simcoe visited us in a body on the 20th of June, and were afforded the amplest opportunity of seeing the institution in every part. Very complimentary speeches were made, and at one of their sessions they passed the following resolution unanimously:

"Resolved that we, the members of the county ouncil of the county of Simcoe in council assembled at the town of Orillia, return our thanks to the superintendent and officials of the Asylum for Idiots at Orillia, and beg to express our best appreciation of the courtesy extended to us, and the opportunity afforded to us of making a thorough inspection of that institution. We were much surprised to find so large a number of helpless immates therein as 612, and were still more surprised as well as delighted, to notice how happy, contented and comfortable each and every one of the immates appeared to be, and the more than filial affection shown by them towards the superintendent. We commend the government in making such ample provision for the care of those unfortunates, who are more amply provided for than they could be in most luxurious homes. The government is to congratulated in securing the services of so efficient an officer as the superintendent."

The Provincial Chess Association also favored us with a visit, many of whose members are distinguished men in the province. Complimentary votes were passed by the Association.

The County of Simcoe Christian Endeavor Society was another important body that visited us during the summer, and equally strong praise and complimentary resolutions were offered.

Thousands of visitors pass through the institution every year, many of them from the remotest parts of the province, as well as from the United States.

Amusements.

During the autumn and winter months we have an assembly of the whole house, inmates, officers and employees three nights every week, at which we have singing, with dancing and calisthenic exercises alternately. These meetings are greatly enjoyed by our people, and they look forward to them very anxiously. Occasionally an outside organization gives a concert or entertainment of some kind, but I am sorry to say these are not very often.

Cost of Maintenance.

As seen from the returns, the cost per capita is \$105.83, an amount considerably in excess of the previous year, which is owing to the charge on maintenance

of renewing and reconstructing the piping in connection with the new heating system. In a work of so extensive a character, the cost is usually charged to capital account, and only for this exceptional expenditure, the maintenance would have been considerably less per capita than the extremely low rate of last year. Such a low rate of maintenance, however, cannot be expected to continue, as the urgency for a more complete equipment to accomplish the work that lies before us must at an early date receive recognition, and when action comes to be taken, there will necessarily be some small additional cost in working expenses. It has long been evident that our staff is kept too low, not having a sufficient number of attendants for an efficient service, nor enough teachers for the educational work that should be done, while we are without trade instructors to direct into useful channels the awakened intelligence that has been cultivated and strengthened as a result of our educational efforts. Without a more liberal equipment in these respects, the best services from our efforts cannot be obtained. If, however, we are given what is necessary for our most pressing needs, we shall, while carrying out the objects of this institution more efficiently, be able to still keep the per capita expenditure within limits to satisfy the most economical.

OFFICERS AND EMPLOYEES.

The entire staff throughout the year has given great satisfaction, each and everyone working in the interest of the Institution.

I have the honor to be, Your obedient servant.

A. H. BEATON,

Medical Superintendent.

THIRTIETH ANNUAL REPORT

UPON THE

COMMON GAOLS, PRISONS AND REFORMATORIES.

The majority of the gaols in the Province are not in good condition either from a sanitary point of view or for the classification of prisoners.

They were built many years ago when little attention was given to such matters.

Very little improvement has been made upon them during the past year; but I am pleased to state that there is a disposition on the part of a number of the counties in which the gaols are situated to thoroughly improve them at an early date, and I am in hopes that the coming year will see much improvement made in the gaols throughout the Province.

During the past year there seems to have been a pretty general desire on the part of the counties to establish County Houses of Refuges for the poor. Some are already completed and others are under way: and I am in hopes that such institutions will become general all over the Province in a short time. They will be the means of relieving the gaols of a large number of their inmates who are committed under the vagrancy Act, having no means of support.

The gaols and lock-ups in the outlying district are all in good order. Considerable improvement has been made during the year in addition to buildings, better cell accommodation, etc. At Mattawa, in addition to the improvements made during the season, a better system of drainage has been provided.

The gaol at North Bay has had an addition to the building, hot water heating, electric light and town water supplies as well as other improvements.

At Rat Portage an addition has been put on the court house and other improvements made to the gaol and gaoler's residence.

The gaols at Parry Sound and Bracebridge are too small for the number of prisoners committed, and weak structurally as places of confinement for notorious criminals.

About the same percentage of decrease in commitments to common gaols for crime, has taken place during the past year. In the year 1895-6 the number was less than in any other year except 1893, since 1873, and the past year lowers the record from that date. The total number of committals for the past year was 8,884, as compared with 9,058 the year previous, showing a decrease of 174. Committals of persons under sixteen years of age were 235 boys and 47 girls. The commitments of those over sixteen years of age was 7,581 males and 102 females. The total number sentenced for the past year was 5,540 compared with the previous year of 5,585, showing a decrease of forty-five.

There were in gaol on the 30th September last 610, being a decrease of fifteen as compared with the year previous. There were 1,716 committals for drunkenness during the past year, being 191 less than the year previous

It will be seen by examining the reports that the committals for drunkenness have been rapidly falling off during the past fifteen years. At about that date the committals were 4,777, and they are now reduced to the number above stated, which shows very plainly that by the legislation of the Government and the interest taken by those identified with temperance work, very much has been accomplished.

The committals for crimes against the person during the past year show 444, and for crimes against public morals and decency, 176. The convictions during the past year represent 62.35 per cent. of the committals, while in the previous, year they were 61.63 per cent.

In tables Nos. 1 to 14 will be found the number of prisoners committed, the counties or places in which they resided, the gaol to which they were committed their crimes, nationality, religion, cost of maintenance, etc., etc.

In my notes of inspection of the prisons of the province, during the year, will be found details as to the number of prisoners, condition of buildings, cells, clothing, sanitary condition, crimes for which prisoners were committed, recommendations, etc.

COMMON GAOLS.

The following table shews the number of prisoners committed to the Common Gaols in the Province in each year, from the 1st October, 1868, to the 30th September, 1897.

	Date of	commitment	Men over 16 years of age.	Boys under 16 years of age,	Women over 16 years of age.	Girls under 16 years of age	Total.

A summary is given below showing the days' stay respectively of those prisoners whose maintenance was chargeable to the Province and of those who were a charge on the municipalities:

					Days' stay.
2,868	Criminal prisoners	s remained	in gaol	l .	72,533
	Municipal "	"			
8.884	Prisoners in all	66	"		241,409

STATISTICAL TABLES.

Following this portion of the report will be found the tables named in the list given hereunder:

- Table No. 2, showing the total number of prisoners in the several gaols on the 30th September, 1897, and the nature of their imprisonment.
- Table No. 3, showing the number of prisoners over and under 16 years of age, the number of re-committals, the number of persons acquitted on being brought to trial and the number of persons committed under civil processes.
- Table No. 4, showing the offences for which prisoners were committed.
- Table No. 5, showing the number of prisoners, male and female, committed under each offence during the year.
- Table No. 6, showing the number of prisoners, male and female, sentenced during the year, and a comparison of the same with the preceding year.
- Table No. 7, showing the number of prisoners upon whom sentence was passed, the nature and periods of the sentences, and the operation of the County Judges' Criminal Courts.
- Table No. 8, showing the offences for which prisoners were sentenced.
- Table No. 9, showing the total number of prisoners, male and female, sentenced under each offence.
- Table No. 10, showing the nationalities, religious denominations, social state, etc., of the prisoners committed.
- Table No. 11, showing the occupations, trades, or callings of the prisoners committed during the year.
- Table No. 12, showing the number of escapes and deaths, the revenue derived from prison labor, the cost of diet, the accommodation of the gaols, and the highest and lowest number of prisoners in custody in each gaol during the year.
- Table No. 13, showing how the prisoners committed during the year were maintained, the cost thereof, and the salaries of officials.
- Table No. 14, showing the daily cost per prisoner in each of the gaols of the Province, for the year ending 30th September, 1897.

After these tables will be found the separate reports upon the gaols and lock-ups.

TABLE No. 2.

Showing the total number of prisoners who were in the several gaols of the Province on the evening of 30th September. 1897, and the nature of their imprisonment.

	(Clas-ifi	cation.			Natur	e of im	prisonr	nent.		per- ned in Sept.,

REPORTS UPON COMMON GAOLS.

BARRIE GAOL.

	1895.	1896.	1897.
Prisoners committed during the year	204	244	227
Greatest number confined at any one time	39	40	5 3
Number of re-committals	52	62	62
Total cost of maintaining gaol	\$4,356.71	\$4 887 68	\$5,695.48

Copies of reports made by me to the Government upon this gaol are annexed:

My first inspection of this gaol for the current year was made on the 22nd April:

There were forty-five prisoners in custody on that day, namely forty-one men and four women.

Of the former three were committed for burglary, three for larcency, two for forgery, one for selling liquor without a license, one for drunkeness, one for insanity, and the other thirty were old men mostly belonging to the locality who were committed as vagrants. Three of the women were vagrants and one insane.

The gaol premises were under-going a general cleaning, white-washing and painting. The beds, bedding cells, corridors, water-closets, etc., were clean and in good order. In the various corridors the wooden floors have been taken up and replaced by concrete. Also water-closets have been placed in each corridor, and steam heating and electric light have been introduced.

The number of old people confined in the gaol who are scarcely able to help themselves, renders it very difficult to properly manage and care for criminal prisoners, some of the old people have to sleep on the floor, two or three are crowded into one bed, and half a dozen or more placed in small rooms wherever space can be found for them. This state of things is disgraceful in the extreme, and I trust that the county authorities will take prompt action in providing a suitable county poor-house. The old people could then be cared for at much less expense to the county and in a much more humane manner.

The fact that the Government contributes a large share of the cost of such a building ought to influence the county council to take action in this matter.

This gaol was inspected by me again on the 27th October, when there were thirty-four prisoners in custody—thirty-one males and three females, twenty-two of whom were vagrants.

Of the others, one was held under a capias, one for rape, one for contempt of Court, two for larceny, one for attempted murder, one for forgery, one as a Crown witness and four insane.

The general condition of the building, beds, bedding, corridors, cells, yards and water-closets was satisfactory. There is good drainage and ventilation. The food supplies are according to regulations, and obtained by contract.

There were twelve suits of clothing in good order. Books properly kept.

BERLIN GAOL.

	1895.	1896.	1897.
Prisoners committed during the year	99	100	105
Greatest number confined at any one time	21	15	16
Number of re-committals	34	38	32
Total cost of maintaining gaol	\$2,015.49	\$1,836.33	\$1,984,76

Copies of reports made to the Government by me upon this gaol are annexed:

There were eight prisoners in custody when I inspected this gaol on the 21st May, namely, six males and two females. Two of the men were committed for trespass, three for being drunk and disorderly, one for throwing stones at railway train; one of the women was a vagrant and the other committed for larceny.

I found the gaol clean and in good order. The food supplies are partly purchased by contract and served in accordance with the regulations. Town water supplied. Nine suits of clothing in good order. Books well kept.

I inspected the gaol again on the 14th October. Seven male prisoners were then in custody for the following offences: murder, one; larceny, three; assault, two; indecent exposure, one.

The building was in good condition and beds, bedding, etc., in neat order. Good drainage and ventilation There were fourteen suits of clothing in good order. The books were entered up.

BELLEVILLE GAOL.

	1 895.	1896.	1897.
Prisoners committed during the year	181	180	150
Greatest number confined at any one time	26	23	24
Number of re-commitals	20	17	15
Total cost of maintaining gaol	\$2,315.00	\$2,255.20	\$2,270.60

Copies of reports made to the Government by me upon this gaol are annexed;

I made an inspection of the Belleville gaol on the 16th January. Eight prisoners were in custody—five males and three females. One of the men was committed for want of sureties to keep the peace, two for larceny, one for assault and one for vagrancy. The women were committed as vagrants.

The cells, bedding, corridors, yards, water-closets, etc., were in good order. There were twelve suits of clothing on hand. The books were well kept.

I have again to call the attention of the county council to the necessity of having the gaol and county buildings heated by steam or hot water. This would be much safer and much more economical. I trust that prompt action will be taken in this matter.

I made a second inspection of this gaol on the 23rd of August, and found seventeen prisoners in custody, all males. Four were committed for assault, four for larceny, one for fraud, one for forgery, one for trespass, one for drunkenness, four for vagrancy and one was insane.

The gaol was undergoing considerable improvement in the way of painting and repairs; and a system of hot water heating was being introduced.

The beds and bedding were clean. Drainage good. Town water supplied Food supplies are obtained by contract and furnished according to the gaol dietary.

Twelve suits of clothing in good order. Books properly kept.

BRANTFORD GAOL.

	1895.	1896.	1897.
Prisoners committed during the year	407	250	234
Greatest number confined at any one time	26	24	22
Number of re-commitals	134	113	122
Total cost of maintaining gaol	\$2,858.75	\$2,631.03	\$1,670.82

Copies of reports made to the Government by me upon this gaol are annexed:

At my inspection of this gaol on the 18th May, I found in custody eleven men and three women. One of the men was held for manslaughter, one for horse stealing, one for drunkenness, six for vagrancy, one for counterfeiting and one for larceny. Two of the women were insane and one was committed for assault.

The cells, bedding, corridors, etc., were clean, and the building generally was in good order.

There were twenty suits of clothing in good order. The food supplies are mostly contracted for and the dietary is as prescribed in the gaol rules and regulations.

I made another inspection of this gaol on the 13th October.

There were seven prisoners in custody—six males and one female.

The gaol was in satisfactory order throughout. Drainage and ventilation good. City water supplied. Sixteen suits of clothing in good order. Books well kept.

Brampton Gaol.

	1895.	1896.	1897.
Prisoners committed during the year	224	288	126
Greatest number confined at any one time	16	23	25
Number of re-committals	68	83	27

An inspection of this gaol was made on the 11th January.

There were then in custody nine males and three females. Seven of the former and two of the latter were vagrants; the other two males were committed for fraud and assault and respectively, and the remaining female was insane.

The gaol was found to be in good order in all respects.

The supplies are purchased partly by tender. The cost for rations is $6\frac{3}{4}$ cents per day per prisoner.

The beds and bedding, corridors and cells, yards and closets were in good condition.

There was an ample supply of gaol clothing on hand. The books were well kept.

I instructed Mr. Nicholson to make the second inspection of this gaol. A copy of his report is annexed:

I made an inspection of the Brampton gaol on the 19th April. The prisoners then in custody numbered nine—seven males and two females.

One of the males was under sentence for assault, one for fraud, and one was insane; all the other prisoners were committed for vagrancy.

One old man had the misfortune to fall and fracture his right thigh the day before my visit. He was carrying wood for the stove at the time.

There are several improvements required in this gaol, which have been mentioned in previous minutes of inspection, namely:

- (1) The use of gas or electric light in place of coal oil lamps.
- (2) The heating of the building by a furnace (hot-water or steam).
- (3) The placing of water-closets in the corriders.

It is to be hoped that the county council will soon take action on these matters which are so important to the safety and sanitary condition of the premises, and to the comfort and security of the prisoners.

I found the records properly entered up. The gaol surgeon's book showed that he makes regular visits to the prisoners.

I instructed Mr. Aikens to make an inspection of this gaol. A copy of his report is annexed:

I made another inspection of Brampton gaol on October 6th. Four prisoners were then in the building, two males and two females. The total population this year was less than half what it was in 1896 according to the register. An arrangement has been entered into by the officials by which tramps are simply locked up over night without being provided with a bed or food.

They are not counted as prisoners, but still the gaoler and turnkey have the trouble and responsibility of cleaning after them.

The closets are still in the yard. With very little expense a closet could be put in each corrider, the interior structure being easily remodelled for that purpose.

Everything both inside and out was in a fairly well-kept condition, and the management of the institution was all that could be desired.

BROCKVILLE GAOL.

	1895.	1896.	1897.
Prisoners committed during the year	160	145	160
Greatest number confined at any one time	16	20	20
Number of re-committals	64	64	82

Copies of the reports, made by me to the Government, are annexed:

My first statutory inspection of the Brockville gaol for the current year was made on the 5th January. There were then nine male prisoners in custody, whose offences were as follows:—vagrancy, four: larceny, four; assault, one.

The general condition of the building was not satisfactory. The beds, bedding, cells and corridors were in well kept order.

The ventilation is not good. There is an ample supply of gaol clothing. The books are well kept.

I have again to call the attention of the county council to the necessity for a different mode of heating the building. The use of stoves is both dangerous and expensive. Recently an attempt was made to fire the building by means of the coal stove.

The rearranging of the cells and the erection of a small house for the gaoler, fitted with hot water or steam heating, are also very necessary improvements, and I trust action will be taken in regard thereto without further delay.

I inspected this gaol again on the 23rd September, and found nine male prisoners in custody whose offences were as follows:—larceny, three; destroying property, one: drunkenness, three; vagrancy, one: and assault, one.

The gaol building is about to be renovated and remodelled. Plans have been prepared and the work is expected to be proceeded with at once.

There were twelve suits of clothing in good order, and the books were properly written up.

Bracebridge Goal.

	1895.	1896.	1897.
Prisoners committed during the year	67	84	60
Greatest number confined at any one time	11	16	14
Number of re-committals	2	9	3
Total cost of maintaining goal	\$1,427.83	\$2,013.76	\$1,660.28.

A copy of the report upon this goal, made by me to the Government is annexed:

I inspected this goal again on the 28th October, when there were five males and one female in custody. Males—one for murder, one for rape, one for larcency, one for forgery and one insane: female, one for larcency.

The building was in good order generally. There were six suits of clothing in good condition. The dietary is according to regulations, and supplies are bought as required.

CAYUGA GOAL.

	1895.	1896.	1897.	
Prisoners committed during the year	60	106	120	
Greatest number confined at any one time	15	24	22	
Number of re-committals	33	58	70	
Total cost of maintaining goal	\$1,740.19	\$1,903.13	\$1,790.20	

Copies of my reports to the Government upon this goal are annexed:

On the day of inspection, June 10th, I found 5 prisoners in custody, 3 males and 2 females. The latter were committed for keeping a disorderly house; the males were vagrants.

The condition of the goal was very satisfactory; the beds, bedding, cells, corridors, waterclosets, and yards were in well kept order. Good drainage and ventilation.

Dietary according to regulations: supplies contracted for. Some prisoners' clothing is required.

Books well kept.

I instructed Mr. Aikens to make the second inspection of this goal. He reported as follows:—

I inspected Cayuga gaol on Sept 24th and found two male prisoners and one female in custody. The latter was awaiting trial for murder, and the others for petty crimes. Out of the goal population for the year, up to the above date, 100

were committed as vagrants, for a day and night or for a very short period. If this nomad class could be forced to work, the several counties in the province would be relieved of the cost of feeding and providing men to care for them in the goals.

Considerable changes in the window grating are necessary if escapes are to be prevented. The present facings on the stone work added to the outside window-bars, form an easy means of climbing over the wall to prisoners. The present furnace also is not much better than a system of patch work and should be entirely overhauled or replaced by another. The gaol yard was clean, the corridors and cells also. I examined thoroughly the office records which I found satisfactory.

CORNWALL GOAL.

	1895.	1896.	1897.
Prisoners committed during the year	77	73	82
Greatest number confined at any one time	23	10	19
Number of re-committals	25	18	30
Total cost of maintaining goal	\$1,941.54	\$1,695.13	\$2,177.85

Copies of reports, made by me to the Government upon this gaol, are annexed:

I made an inspection of this gaol on the 5th January, when I had the pleasure of finding it empty of prisoners. The general condition of the building was very good. The beds, bedding, cells and corridors, yards and water closets were in a satisfactory state of cleanliness and order, There were ten suits of clothing in good order, and the books were entered up.

A second inspection of this gaol was made by me on the 24th September. There were on that day fifteen prisoners in custody, ten males and two females. Of the former eight were vagrants, one insane, and one committed for trespass. One of the females was charged with infanticide and the other drunkenness.

The prisoners are employed in breaking stone and cutting wood.

The building is not in a very satisfactory condition. A room is badly needed for storing prisoners' clothing. The wall in the work-yard requires pointing both for its preservation and the safety of prisoners. Ventilation and drainage good. Town water supplied.

Food supplies are partly contracted for and served according to regulations. Books well kept.

COBOURG GAOL.

	1895.	1896.	1897.
Prisoners committed during the year	117	212	162
Greatest number confined at any one time	21	48	44
Number of re-committals	42	78	81
Total cost of maintaining gaol	\$4,055.72	\$6,355.84	6,653.56.

Copies of my report, made to the Government on this gaol, are annexed:

I inspected the Cobourg gaol on the 18th January, and found 34 prisoners in custody—twenty-four men and ten women, none of whom were charged with erious offences: thirty of them were vagrants.

The different departments of the gaol, as well as the beds, bedding, etc., were in good state of cleanliness and order. Fairly good drainage and ventilation.

The water supply is from wells and tank. The food supplies are of good quality. Fourteen suits of clothing in good order. Books well kept.

Fourteen stoves are used in heating the building. These, as well as the use of coal oil lamps, are a great source of danger from fire. The building should be heated by a furnace and supplied with electric light, as a matter of safety and economy.

There were thirty-five prisoners in custody when I inspected this gaol on the 25th August, namely, twenty-five males and ten females. Of the males three were charged with larceny, one forgery, one horse stealing, one indecent assault, and the others were drunks and vagrants. One of the females was charged with murder, and the rest were vagrants.

The general condition of the building was not very good. The beds and bedding were clean.

Drainage and ventilation not very good. The dietary is according to regulations, and supplies are contracted for. Eighteen suits of clothes in good order, Books properly kept.

CHATHAM GAOL.

	1895.	1896.	1897.
Prisoners committed during the year	182	164	183
Greatest number confined at any one time	21	15	20
Number of re-committals		11	11
Total cost of maintaining gaol	\$2,221.41	\$2,314.80	82,564.14

Copies of my reports to the Government are annexed.

I made an inspection of this gaol on the 15th April and found seven prisoners in custody—six males and one female.

One of the males was committed for murder, one for larceny, one for fraud one for drunkenness and two for vagrancy. The female was committed for infanticide.

The beds and bedding, cells and corridors, yards and water-closets were clean and in good order.

As previously pointed out the building is much in need of repairs, and the interior should be re-arranged so as to admit of a better classification of prisoners. A furnace is required for heating purposes. The books are properly kept.

A second inspection of this gaol was made by me on the 11th September, when its occupants were seven male prisoners—one committed for shooting, three for larceny, one for assault, one for vagrancy, and one a lunatic.

The building is not in good condition, and should be thoroughly over-hauled. The drainage and ventilation are not very good. Town water supplied.

I regret to find that nothing has been done in the way of a better system of heating for the gaol, and that the re-modelling of the building is still delayed. It is in very bad shape for the classification of prisoners, and I trust that at an early day the county authorities will deal with the improvements I have recommended.

GODERICH GAOL.

·	1895.	1896.	1897.
Prisoners committed during the year	73	81	75
Greatest number confined at one time	27	32	32
Number of re-committals	27	36	22
Total cost of maintaining gaol	\$2,606.22	\$2,268.20	\$2,447.77

I made an inspection of the Goderich gaol on the 2nd June, when its inmates were six men and one woman. One of the former had been committed as an idiot, and all the others for minor offences.

Spring cleaning was going on, calsomining, painting, etc.

The water-closets in the corridors are not working well, and require to be put in good order. The closets in the yards should be done away with, and the pits filled up. The drainage is very defective and causes a great deal of dampness in the gaoler's quarters. This should be remedied without further delay.

l instructed Mr. Mann to make an inspection of this gaol, a copy of his report is annexed:

I visited the above gaol as you instructed on 14th September, 1897, on which date there were only 3 prisoners in custody who were committed for offences as follows and were all males, viz.: Insane, one; drunk and disorderly, one; shooting, one.

The general condition of the gaol, I am of opinion, is fairly good, with the exception of the ventilation which is very poor.

Contract has been let to have the town water system introduced into the gaol.

Supplies are obtained by tender. Kitchen was in perfect order, and quality of food good. The gaoler's quarters are small, and I think an addition could be made at a small expense so as too meet this requirement.

Books properly kept and entered up to date.

GUELPH GAOL.

Prisoners committed during the year	$\frac{1895}{117}$	1896. 80	$\frac{1897.}{105}$
Greatest number confined at any one time.	14	15	10
Number of re-committals	8	2	11
Total cost of maintaining gaol	\$3,820.40	\$2,634.48	\$2,753.95

A copy of my report made to the Government upon this gaol is annexed:

I inspected this gaol on the 2nd March. There were nine prisoners in custody—eight men and one woman. The latter was committed as a vagrant, and the others as follows—arson, two; seduction, one; larceny, one; vagrancy, three: lunacy, one.

The building, in all parts, was clean and orderly. The closets are in the yards: they are the dry earth system, and are emptied two or three times in the year.

The drainage and ventilation are not good. City water supplied. The food supplies are not of good quality; they are obtained by contract.

Six suits of clothing on hand in good order; more clothing required.

I found that entries have not been made in the dietary book since July last, and in the record book not since January, 1896.

The gaol surgeon's book also is not properly hept, as it does not show the medicines prescribed, and the directions for administering same. This oversight may be due to not giving more attention to the rules and regulations as to duties.

I instructed Mr. Mann to make a second inspection of this gaol. A copy of his report is attached:

As instructed by you, I made an inspection of the Guelph–gaol on the 17th September, 1897, on which day there were only three male prisoners in custody, and who were held for the following offences, viz.:—vagrancy, one; lunatic, one, and cruelty to animals, one.

This gaol was in its normal state, everything being in good order.

It appears to me that the accommodation for the care of insane patients in this gaol is not what it should be, and that at a comparatively small cost a small wing might be added to the north-east corner of the gaol, on the ground floor, for that purpose.

Books were entered up and properly kept.

HAMILTON GAOL.

	1895.	1896.	1897.
Prisoners committed during the year	367	5 49	457
Greatest number confined at any one time.	35	44	36
Number of re-committals	203	262	354
Total cost of maintaining gaol	84,822.74	\$4,730.09	\$6,331.27

Copies of my report to the Government upon this gaol are annexed:

There were in custody twenty-three men and three women when I inspected this gaol on 17th March.

Two of the men were committed for assault, four for larceny, one for house-breaking, two for receiving stolen goods, one for trespass, and one as insane.

I found the corridors, cells, beds and bedding, all clean and in good order. Considerable improvement has been made in the gaol since my last inspection.

New water-closets have been put in, and the drainage system improved. New flooring has been laid

The prisoners are employed in breaking stone, which is used in repairing the public streets.

Plenty of clothing, in good order. Books properly kept.

I inspected this gaol on the 18th November. The number of prisoners in custody was thirty, viz.:—twenty-four males and six females, charged as follows:

Males—vagrancy, nine; aggravated assault, three; common assault four; damaging property, three; larceny, three; cattle-stealing, one; insane, one.

Females—keeping house of ill-fame, one: larceny, two: as sault, one; insane, two.

There were thirty-five suits of clothing in good order. Food supplied according to regulations.

Considerable improvement has been made to the gaol during the year. A new slate roof has been put on part of it.

KINGSTON GAOL

Prisoners committed during the year	$\frac{1895}{162}$	1896. 119	1897. 117
Greatest number confined at any one time	30	21	26
Number of re-committals	13	4	8
Total cost of maintaining gaol	\$4,222.30	\$ 3,970.00	\$3,047.00.

Copies of my reports upon this gaol are annexed:

I made an inspection of the Kingston gaol, on the 29th March, and found fourteen prisoners in custody, all males—three of whom were lunatics and the others drunks and vagrants.

The gaol was in good order throughout. The supplies are mostly bought by contract, and the dietary is according to regulations. There were twenty-four suits of clothing in good order. Books properly kept.

The roof requires some repairs as it leaks considerably.

The use of coal oil lamps in the gaol should be dispensed with as they are dangerous, and expensive. Electric lighting would be cheaper and safer, and should be introduced at once.

I again inspected this gaol on the 28th August, when there were five males and two females in custody—one of the males was insane: all the others were committed for minor offences.

The general condition of the building was good. The beds and bedding, yards and water-closets were clean and in good order.

The drainage is not very good. City water supplied. Eighteen suits of clothing in good order. Books entered up to date.

LONDON GAOL.

	1895.	1896.	1897.
Prisoners committed during the year	563	552	488
Greatest number confined at any one time	42	47	8
Number of re-committals	213	200	238
Total cost of maintaining gaol	\$6,344.82	\$5,761.84	\$6,737.51.

Copies of my reports made to the Government upon this gaol are annexed: I made an inspection of this gaol on the 22nd May,—there were thirty-six prisoners in custody, thirty-two men and four women.

They were committed as follows: males—two for larceny, two for assault, eight for attempted train wrecking, trespassing, etc., two for damaging railway property, eight drunk and disorderly and ten vagrants. Females—one for bigamy, one for vagrancy, and two insane.

I found the gaol clean and in good order throughout. The stock of clothing comprised twenty-five suits, all in good condition. The books were entered up.

The old wooden box water closets in the corridors must be taken out, and replaced by metal ones. The old closets are in a very filthy and dangerous state.

I made an inspection of the London gaol on the 10th September, when there were twenty-seven male and six female prisoners in custody. They were committed for the following offences:—

Males—larceny, ten; assault, three; fraud, one; destroying property, one; carrying fire arms, one; drunkenness, six; vagrancy, five.

Females-murder, one; vagrancy, two; drunkenness, three.

The beds, bedding, cells and corridors were clean and in good order; but the building is old and dilapidated. The water-closets in the corridors are in poor condition. There is good drainage, but the ventilation is poor.

There were thirty-three suits of clothing in good order.

The water-closets should be replaced by more modern style of closet, and electric light should be placed in the corridors.

LINDSAY GAOL

	1895.	1896.	1897.
Prisoners committed during the year	80	108	69
Greatest number confined at any one time	16	17	14
Number of re-committals	6	7	5
Total cost of maintaining gaol	\$1,810.61	\$1,706.18	\$1,760.59

A copy of a report made to the Government by me upon this gaol, is annexed:

I made an inspection of this gaol on the 9th January, and found therein eleven prisoners, ten men and one woman. The latter was insane.

The gaol was in good order throughout. There is good drainage and ventilation. Town and well water supply. Twelve suits of clothing in good order. The food supplies are partly contracted for. The books are properly kept.

I instructed Mr. Mann to make the second inspection of this gaol. A copy of his report is annexed:

According to your instruction I inspected the above named gaol on the 12th July, 1897, on which occasion there were seven prisoners in custody who were serving terms for the following offences (all being males) viz., larency 3, vagrancy 3, insane 1.

This gaol was in its usual state and I have nothing to report of unusual moment.

Books were entered up to date.

L'ORIGNAL GAOL

	1895.	1896.	1897.
Prisoners committed during the year	17	39	33
Greatest number confined at any one time	11	13	12
Number of re-committals	1	2	3
Total cost of maintaining gaol	\$1,639.06	\$1.575.76	\$1.621.13

I inspected the L'Orignal gaol on the 30th January, when there were seven prisoners in custody—five males and two females—all of whom were vagrants, excepting one boy, fourteen years of age, committed for larceny.

The general condition of the building was good. The beds, bedding, corridors and cells were in a good state of cleanliness. The water closets are in the gaol yards. The drainage and ventilation are not as good as they should be. Four suits of clothing on hand in good order. Books well kept.

I inspected this gaol on the 30th September. There were nine prisoners in custody—seven males and two females. Of the males three were committed for vagrancy, two for larceny, one for obtaning money under false pretences. The females were vagrants.

I found the gaol in good order, and the beds, bedding, etc., clean. The prisoners are employed in breaking stone for the municipality, and cutting wood. Books properly kept.

MILTON GAOL.

	1896.	1895.	1897.
Prisoners committed during the year,	315	312	325
Greatest number confined at any one time	25	15	19
Number of re-committals	31	33	36
Total cost of maintaining gaol	\$1,249.15	\$1,170.63	\$1,213.68

I instructed Mr. Nicholson to make an inspection of this goal. A copy of his report is annexed:

I made an inspection of the Milton gaol on the 16th April.

There were five male prisoners in custody, all committed for vagrancy. There have been 269 committals to this gaol since the 1st October mostly for vagrancy.

The supply of gaol clothing is wearing out and requires replenishing.

Since the last inspection electric lights have been placed in the gaoler's residence and gaol corridors.

The books were found to be fully entered up.

I instructed Mr. Aikins to make an inspection of this gaol. A copy of his report is annexed:

I inspected this gaol on September 11th. Four male prisoners were in the building, two of them vagrants, one committed for assault, and one for contempt of court. Compared with the number committed as criminals, the vagrants are about ten to one in this gaol—too large a proportion to be committed to a penal institution.

I went through the gaol building, examined the corridors, cells, beddingwater supply, etc., also inspected the gaol yard, water closets, and other outbuildings. The several appliances were quite satisfactory, ventilation and drainage are all that is necessary to maintain good sanitation.

I looked through the gaol records, the register, dietary book, surgeon's book, etc. These were all neat and systematically kept.

NAPANEE GAOL.

	1895.	1896.	1897.
Prisoners committed during the year	58	51	48
Greatest number confined at any one time	9	11	11
Number of re-committals	18	19	13
Total cost of maintaining gaol	\$1,466.41	\$1,501.02	\$1,748.68

Copies of my reports made to the Government upon this gaol, are annexed: This gaol was inspected by me on the 16th of January.

Seven males and one female were in custody, of the former one was an idiot, four were vagrants and the other two were charged with assault and larcency respectfully: the woman was a vagrant.

I found the building in good condition, and the bedding, etc., well kept. There were eight suits of clothing in good order. The books were properly written up.

Several improvements were made during last year, namely the placing of a hot water heater in the gaol which also heats the turnkey's quarters: and a hotair furnace in the gaoler's residence.

As soon as a drainage system is available the water closets should be placed in the corridors.

I think it is but just to the gaoler that I should call the attention of the county council to the fact that his salary is very much lower than the average of the salaries paid to the gaolers of the Province. I hope they will consider his case, and grant him such an increase as will place his salary on a more equable footing as compared with the average amount paid for such services.

OTTAWA GAOL.

	1895.	1896.	1897.
Prisoners committed during the year	563	534	564
Greatest number confined at any one time	44	44	55
Number of re-committals	67	41	67
Total cost of maintaining gaol	\$4,842.20	84,549,92	\$5,014,00

Copies of my reports to the Government upon the gaol, are annexed:

I inspected the Ottawa gaol on the 27th of January. The number of prisoners in custody was twenty-five (nineteen males and six females), and their offences were as follows: Males, obstructing railway, one: larcency, one; drunkeness, two: rape, one: manslaughter one: insane. two: vagrancy. three. Females, larcency, one: insane. three; vagrancy, two.

The condition of the building generally was very good. The beds and bedding, corridors and cells, yards and water closets were clean and in neat order. There were twenty-five suits of clothing in good order. The records were properly entered up. Descipline and management good.

I made a second inspection of this gaol on the 22nd of September. On that occasion there were twenty-three prisoners in custody—thirteen males and ten females. Of the males four were insane: three were committed for larcency: one for disturbing the peace: one for wounding: one for damaging property: one for contempt of court: one for vagrancy: and one for illicit intercourse with an imbecile. Two of the females were insane; four were charged with drunkenness: one with assault; one, keeping a disorderly house: two, vagrancy.

The prisoners are employed in breaking stone.

The beds and bedding, cells and corridors, water closets, yards, etc. were in well kept order. Drainage and ventilation good. The food supplies are contracted for, and served according to the dietary regulations. Thirty suits of clothing were in good order. Books properly kept.

Owen Sound Ga	OL.		
	1895.	1896.	1897.
Prisoners committed during the year	178	165	184
Greatest number confined at any one time	44	54	69
Number of re-committals	118	88	80
Total cost of maintaining gaol	\$5,177.92	\$4,859.48	\$4,045.56
		,	

Copies of my reports to the Government upon this gool, are annexed:

I made an inspection of this gaol on the 27th June.

The building is much in need of repairs, and the interior wood-work requires painting. The later work can be done by prison labor if the material is furnished. The water-closets in the gaol yards require renovating and cleaning.

The beds and bedding were clean, but the corridors were not in as tidy a condition as they should be. The gaol yards require cleaning up.

The supplies are obtained by contract, and the dietary is as prescribed by the regulations. There were fifty suits of clothing in good order.

There were ten prisoners in custody—nine males and one female. One male and one female were insane. The charges against the others were:—Trespass, one; illicit distilling, one; indecent exposure, one; fraud, one; vagrancy, four.

The books were well kept.

I made another inspection of this gaol on the first October. On that occasion there were thirteen prisoners in custody—ten men and three women. One man and two women were insane, and all the others were vagrants.

The condition of the gaol as regards cleanliness was not good and the authorities were instructed to see that the necessary cleaning was done and other improvements made at an early day. A general storeroom should be provided for storing clothing, etc. The inmates of the gaol were old and decrepid and unable to do any manual labor. Food is supplied as required by the dietary regulations. There were thirty suits of clothing in good order.

ORANGEVILLE GAOL.

	1895.	1896.	1897.
Prisoners committed during the year	71	72	133
Greatest number confined at any one time.	24	24	28
Number of re-committals	19	16	27
Total cost of maintaining gaol	\$2,032 72	\$2,172.17	\$2,335.00

I instructed Mr. Aikens to make an inspection of this gaol. A copy of his report is annexed:

I visited this gaol on June 28th, and found a population of six, mostly all vagrants or paupers, either unwilling or unable to do much work around the building. On looking over the register I noticed that there were over one hundedr committals during the year of a similar class. Most of these were, of course, in charge during the winter months. Nevertheless, it is quite apparent, that if Dufferin had a county poor-house, with sufficient land, many of these prisoners could be made self-sustaining.

I made a tour of the building throughout, and found it neat and clean, well ventilated, and equipped with prison appliances.

I also examined the bedding, gaol clothing, yards and surroundings, as well as the several books in use, all of which gave evidence of regular attention and care.

There were fourteen prisoners in custody when I inspected this gaol on the 2nd October, namely, nine males and five females, eleven of whom were vagrants.

The general condition of the building was very good: the beds and bedding, corridors and cells, yards and water-closets, were clean and in good order.

Drainage and ventilation good. Town water supplied. Dietary according to regulations. Six suits of clothing in good order. Books properly kept.

PERTH GAOL.

Prisoners committed during the year	1895. 51	1896. 75	$\frac{1897}{79}$
Greatest number confined at any one time.	19	21	30
Number of re-committals	27	29	21
Total cost of maintaining gaol	\$ 2,371.75	\$2,200.75.	\$2,269.93

An inspection was made of this gaol on the 3rd April when there were fifteen men and three women in custody. One of the men was partially insane. All the other prisoners were committed for vagrancy or minor offences.

The cells, corridors, etc., were undergoing a general cleaning and whitewashing. Repairs were also being made.

One prisoner complained of the food, and the room where he partook of it: but upon enquiry I could not find that he was badly treated. I found a male prisoner on a cot in the corridor in a dying condition from old age. He has been in gaol for ten years as a vagrant.

The kitchen is in bad condition, the stove smoking up the room continually. This must be caused by defective flues, or choked up pipes and ought to be remedied at once.

There are fourteen suits of gaol clothing in good order.

Food supplies are furnished by contract.

It is expected that the Town of Perth will put in a system of waterworks this season, and, in that event, I would recommend that the county council arrange for the service being placed in the gaol.

The books were properly entered up.

made an inspection of this gaol on the 6th September.

Fifteen prisoners (twelve men and three women) were in custody, charged as follows:

Males—rape, one; insane, one vagrancy, ten

Females—Insane, one: vagrancy, two.

The general condition of the building was very good. The beas and bedding, cells and corridors, water-closets and yards, were in satisfactory order.

The food supplies are mostly contracted for. Dietary is according to the regulations; quality good.

Books properly kept.

PICTON GAOL.

	1895.	1896.	1897.
Prisoners committed during the year	24	36	49
Greatest number confined at any one time.	4	4	6
Number of re-committals	10	18	26
Total cost of maintaining gaol	\$1,049.42	\$1,017.98	\$1,124.78

A copy of the report made by me to the Government upon this gaol, is annexed:

There were no prisoners in custody when I inspected this gaol, on the 27th April.

All parts of the the building were found to be in good order, and there was an ample supply of clothing on hand.

PEMBROKE GAOL.

	1895.	1896.	1897.
Prisoners committed during the year	44	56	71
Greatest number confined at any one time	15	13	19
Number of re-committals	13	24	27
Total cost of maintaining gaol	\$1,543.75	\$1.529.75	\$1,881.97.

Copies of the reports made by me to the Government upon this gaol are annexed:

I inspected the Pembroke gaol on the 28th January, when there were fourteen prisoners under charge, namely, ten men and four women. Of the former, three were committed for larceny, one for rape and six for vagrancy. One of the women was charged with being a lunatic, and the others were vagrants.

I found the gaol well kept in all departments. The water closets are in the gaol yards.

The drainage is bad, ventilation is very good. The food supplies are of good quality. Some good clothing is required. Books well kept.

I beg to call the attention of the sheriff to the necessity for improved drainage which should be attended to during the coming summer; also that water-closets should be placed in the corridors when proper sewerage has been provided. The sheriff will also please have some sheets and clothing ordered.

On inspecting this gaol, on the 7th September, I found ten prisoners in custody, eight males and two females, whose offences were as follows:

Males—larceny, two; forgery, one; murder, one; held under capias, one; arson, one: vagrancy, two.—Females, vagrancy, two.

The building was clean and in good order. Good drainage and ventilation. Hot water heating. Water supply from town system. Supplies are obtained by contract, quality good. Twelve suits of clothing in good order. Books properly kept.

Peterborough Gaol.

Prisoners committed during the year	1895. 180	1896. 174	1897. 166
Greatest number confined at any one time	26	22	21
Number of re-committals	74		49
Total cost of maintaining gaol	\$2,882.70	\$2,441.03	\$2,437.61

A copy of my report made to the Government upon this gool is annexed:

I visited this gaol on the 8th January. There were seventeen male prisoners—no females. Their offences were as follows:

Violation of game laws, one; larceny, one: indecent assault, one; drunk and disorderly, one: insane, one; vagrancy, twelve.

The building was in good order and the beds, bedding, etc., were clean. The drainage is to a cesspool. The ventilation is very good.

There were thirty suits of clothing in good order. The books were entered up.

I instructed Mr. Mann to make a second inspection of this gaol. A copy of his report is annexed:

The above gaol, according to your instructions, was inspected by me on the 28th August, on which occasion there were fourteen prisoners in custody, who were committed for the following offences viz., (and being all males): vagrancy, six: rape, one; attempt to steal, one: larceny, two: drunk and disorderly, one; assault, two: forgery, one.

General c	ondition	of	building	good.

-4	* *	::	ventilation	+6
4.6	. (٠.	water	4.
+6	4.	"	quality of food	. (

Some of the cells and corridors would be better for a coat of paint.

A quantity of stone has been procured and provides labour for a number of prisoners in breaking them. Books are properly kept.

PORT ARTHUR GAOL

	1895.	1896.	1897.
Prisoners committed during the year	26	36	45
Greatest number confined at any one time	9	12	13
Number of re-committals	3	3	8
Total cost of maintaining gaol	\$1,639.85	\$1,499,58	\$1,538.60

I made an inspection of this gaol on the 30th June. There were six prisoners in custody—all males—whose offences were as follows:—

Assault two, drunkenness one, and vagrancy three.

The building was in well kept order and the beds, bedding, cells, corridors and water-closets were clean.

Twenty suits of clothing in good order. Well water supplied. Dietary in accordance with the regulations. Books properly kept.

The kitchen requires lathing and plastering, and I requested tenders for the work to be forwarded to the department. Thirty feet of old pipe (one quarter inch) is required to connect the pump with the cistern.

PARRY SOUND GAOL.

	1895.	1896.	1897.
Prisoners committed during the year	47	24	29
Greatest number confined at any one time	8	8	8
Number of re-committals	1	1	4
Total cost of maintaining gaol	\$677.30	\$976.00	\$1,033.05

I instructed Mr. Aikens to make an inspection of this gaol. A copy of his report is annexed:—

This gaol was empty of prisoners when I visited it on September 30th. The population this year is just one-half what it was a year ago, namely twenty-nine to fifty-seven. They are all committed for crimes, although the doors in the building are ill adapted to prevent any ordinary prisoner from escaping Considering the fact that the institution is now recognized as a gaol, the next step will probably be that Parry Sound District will be changed to a county, and in that case the gaol should be better equipped.

In the meantime some slight expense will be necessary to make it safe. Another light should be added to the electric plant in the court yard. This outlay will be trivial. The gaoler had his books all entered up satisfactorily to the end of the year.

RAT PORTAGE GAOL.

	1895.	1896.	1897.
Prisoners committed during the year	83	155	161
Greatest number confined at anyone time	10	11	12
Number of re-committals	15	57	34
Total cost of maintaining goal	\$2,523.97	\$2,537.13	\$2,592.48

A copy of a report upon this gaol, made by me to the Government, is annexed:

I made an inspection of the Rat Portage gaol on the 2nd July. There were four male prisoners in custody; no females.

Two were committed for drunkness, one for larceny, and one for attempting suicide.

The general condition of the building was good: the beds, bedding, and cells, yards and water closets were clean. Lake water supplied. Food according to dietary regulations, and supplies obtained as required.

Twelve suits of clothing in good order. Drainage and ventilation good. Books properly kept.

The entrance to court house, wood over windows, side porch, and steps to main entrance need painting.

The west cell wing requires plastering and I asked the gaoler to get tenders for the work. The gaoler's house was papered and calsomined during the spring.

SIMCOE GAOL.

	1895.	1896.	1897.
Prisoners committed during the year	125	84	105
Greatest number confined at any one time	17	11	12
Number of re-committals	33	• 24	46
Total cost of maintaining goal	\$1,452.10	\$1,528.71	\$1,501.4

A copy of my report made to the Government upon this goal, is annexed

I inspected this gaol on the 10th June. There were then four prisoners in custody—two males and two females. One of the males was a vagrant and the other was committed for shooting with intent. Both the females were vagrants.

The beds, bedding, cells and corridors were clean and orderly, likewise the yards and water-closets. There is good drainage and ventilation. Well water supplied. Sixteen suits of clothing in good order. Books well kept.

The floor in the front corridor requires repairing.

I instructed Mr. Aikens to make an inspection of this gaol. A copy of his report is annexed:

Three male prisoners and two females were in Simcoe gaol when I inspected it on September 24th. One of the latter should have been kept in the county poor house instead of being sent to gaol.

There is a very prevalent tendency to saddle all disagreeable inmates of poor houses on the gaols. This should be stopped because there is usually more help available in the former to look after them than the latter, and the cost makes no material difference.

The system of heating this gaol is neither safe nor sufficient and it is time that some change from the primitive wood stoves some of which are cracked and doubly dangerous.

The population this year is much more than last, the increase being due more to vagrancy than to crime.

I inspected the general register, dietary, surgeon's book and others which were well attended to.

ST. CATHARINES GAOL.

Prisoners committed during the year	1895. 78	1896. 95	$1897. \\ 53$
Greatest number confined at any one time		25	10
Number of re-committals	38	44	15
Total cost of maintaining gaol	\$2,199.59	\$2,250.44	\$2,053.29

A copy of my report made to the Government upon this gaol is annexed:

An inspection of this gaol was made by me on the 20th February. Only three men were incustody, one was insane, one a vagrant, and one charged with obtaining goods under false pretences.

I found no change in the building or premises since my inspection. The beds, bedding, cells, corridors, yards, and water-closets were clean and in good order. Drainage and ventilation are not good. Connection should be made with the city sewers, and the water-closets should be placed in the corridors.

Stoves for heating should be done away with and a furnace be put in. A cellar should be provided for the use of the gaoler.

I instructed Mr. Nicholson to make the second inspection of this gaol. A copy of his report is annexed.

I made an inspection of this gaol on the 6th September and saw the five males then in custody. There were no female prisoners. One of the males was waiting trial for burglary, and two for larceny; one was under sentence of four months for being drunk and disorderly, and one thirty days for larceny.

A new boiler and radiators have been placed in the gaol for heating the building by steam. A cellar has also been built in the yard, convenient to the gaoler's kitchen, where the food supplies can be kept

The premises were in good order and the books entered up.

SARNIA GAOL.

	1895.	1896.	1897.
Prisoners committed during the year	308	187	183
Greatest number confined at any one time	40	33	18
Number of re-committals	112	44	56
Total cost of maintaining goal	\$2,326.38	\$2,381.78	\$2,467.10

I inspected the Sarnia gaol on the 23rd May. There were eight males and two females in custody, whose offences were as follows:—

Males—larceny, 3; non-support of family, 1; drunkness, 2; vagrancy, 2; females—vagrancy, 2.

The general condition of the building, corridors, cells, beds and bedding was very satisfactory. The drainage and ventilation are good. Town water supplied.

Food supplies are contracted for and served according to the gaol dietry. Nine suits of clothing in good order. Boooks well kept.

There were fifteen persons in custody when I visited this jail on 13th September, all of whom were males. One was insane and the others were charged with minor offences.

The beds and bedding, corridors and cells, yards and water closets were all clean and in good order.

There were only four suits of clothing in good condition. The books were correctly entered up.

STRATFORD GAOL.

	1895.	1896.	1897.
Prisoners committed during the year	185	184	133
Greatest number confined at any one time .	23	18	20
Number of re-committals	95	78	50
Total cost of maintaining gaol	\$3,223,41	\$2,652.96	\$2,331,64.

A copy of report made by me upon this gaol to the Government is ennexed:

The Stratford gaol was inspected on the 12th January. There were eight male prisoners in custody—no females. One was committed for false pretences, two for theft, one for attempting to steal, one for keeping a house of ill-fame, and the others for vagrancy.

The prisoners are employed at cutting wood, cleaning the premises, etc. The supplies are partly purchased by contract. The cost per prisoner for rations is ten and one-half cents per day. The food supplies are of good quality, and are served according to the dietary regulations.

More clothing for prisoners is required. The building is well heated and lighted, and has good drainage and ventilation. The booke were found to be properly kept.

I instructed Mr. Mann to make the second inspection of this gaol. A copy of his report is annexed:—

According to instructions received from you I made an inspection of the above named gool on the 15th September, 1897, on which date there were eight prisoners in custody, who were committed for offences as follows: Six males,—One theft, one waiting trial for forgery, one assault with intent, three vagrancy: female lunatics, two.

The general condition of this gaol was good.

Supplies are bought in open market, with the exception of beef and bread, which are purchased by tender.

Books were entered up and properly kept.

SANDWICH GAOL.

	1895.	1896.	1897.
Prisoners committed during the year	193	183	179
Greatest number confined at any one time	23	22	46
Number of re-committals	18	23	33
Total cost of maintaining gaol	\$3,613.24	\$3,500.51	\$4,384.34

At the time of my inspection of this gaol, 16th April, there were only two male prisoners in custody, one for vagrancy and one for non-support of his family.

The beds, bedding, cells, corridors, yards and water-closets were clean and well kept. Drainage and ventilation are good. Town water supplied. Food supplies are obtained by contract in part, and served according to dietary regulations.

Eight suits of clothing on hand in good order. More clothing is required.

This gaol (including the court house) has been entirely remodelled during the past year at a cost of over thirty thousand dollars, and is now one of the most complete and convenient structures in the Province. The improvements comprise steam heating, electric lighting, hot and cold water, bath-rooms, and water closets in the corridors. There are eight iron cells for women, in a double tier of four cells each. A door leading into the exercise yard has been opened during the season, and a new wall has been built enclosing a separate yard for the women.

There are seven iron cells for men, and thirty-two old cells have been put in good condition.

The gaoler's office is conveniently located for his duties.

There is a good kitchen in the basement supplied with a new range. The laundry is also in the basement. There is good drainage and ventilation.

I instructed Mr. Nicholson to make an inspection of this gaol. A copy of his report is annexed :

According to instructions I made an inspection of this gaol on the 17th August. There were twelve males and three females in custody on that day. One male and two females were insane; all the others were committed for minor offences.

The premises were in good order throughout. Electric light is used, and the water supply is from the Windsor water works. The books were found to be properly written up.

St. Thomas Gaol.

	1895.	1896.	1897.
Prisoners committed during the year	115	139	131
Greatest number confined at any one time	16	25	20
Number of re-committals	3 6	33	40
Total cost of maintaining gaol	\$2,129.52	\$2,050.91	2,041.81

Copies of the reports, made upon this gaol by me to the Government are annexed:

An inspection of this gaol was made by me on the 23rd May, when there were six male prisoners in custody—three for vagrancy, two for larceny, and one for trespass.

The general condition of the gaol was very good; beds, bedding, cells, corridors and yards were clean. The water closets were not in very good condition. Good drainage and ventilation.

Twelve suits of clothing in good order. Books all right.

There has been no heater put in for the purpose of heating water for the bath as yet. The water closets in the corridors require to be renewed; also metal ceilings should be placed in the corridors. This work should be attended to as soon as possible.

I instructed Mr. Nicholson to make an inspection of this gaol. A copy of his report is annexed:

I made the second inspection of this gaol on the 19th August, when there were nine prisoners in custody—seven males and two females.

Of the former, four were under sentence, one was on remand, one was waiting trial, and one was certified insane. One of the females was under sentence for larceny, and the other was insane.

The books of record were examined and found to be properly kept.

The gaol was in good condition both internally and externally.

A heap of ashes in one of the yards gave the place an untidy appearance This should be removed at once.

SAULT STE. MARIE GAOL.

	1895.	1896.	1897.
Prisoners committed during the year	48	82	71
Greatest number confined at any one time	11	13	11
Number of re-committals	5	6	3
Total cost of maintaining gaol	\$1,740.14	\$1 839.54	\$1826.61

A copy of the report made to the Government by me upon this gaol is annexed:

I made an inspection of this gao' on the 29th June. There were nine prisoners in custody—four males and five females. Two of the men were under sentence, one for keeping disorderly house, and the other for resisting tax collector: the other two were awaiting trial for rescuing prisoners.

Three of the women were on remand for helping to rescue prisoners, one for prostitution, and one under sentence for prostitution.

I made arrangements for the laying of a water pipe from the street main to gaol and the gaoler's residence. Another year and about 310 feet of new fencing will be required along the roadway.

TORONTO GAOL.

	1895.	1896.	1897.
Prisoners committed during the year	2,505	2,277	2,221
Greatest number confined at any one time	217	207	189
Numbe of recommittals	1,070	1,018	938
Total cost of maintaining gaol	\$22,957.32	\$22,485.25	\$23,525.19

Copies of my reports to the Government upon this gaol, are annexed:

I made an inspection of this gaol on the 28th April. On that occasion there were 117 prisoners in custody, namely, eighty-six males and thirty-one females, who were held on the following charges: males—larceny, twenty-nine: murder, two; assault, five: drunkenness, forty-seven: insane, three.

Females-larceny, four: drunkenness and vagrancy, twenty-one; insane, six.

The general condition of the gaol corridors, cells, beds and bedding, yards and water closets, was very satisfactory. Good drainage, ventilation and water supply. An ample supply of clothing on hand. Books properly kept.

If the old people who are committed for vagrancy were provided for in some other way, the gaol accommodation would be all that is required for the proper classification of prisoners.

This gaol was inspected by me on the 7th October. There were then in custody eighty seven males and 37 females—a total of 124.

The premises were in the best of order, and the beds and bedding were clean and tidy.

There is good drainage and ventilation. There was an ample supply of clothing for prisoners.

The number in custody on this occasion was 124, viz., eighty-seven males and thirty-seven fumales. One male and seven females were committed as lunatics: on remand, three males: waiting sentence, seven males: serving sentences for indictable offences, eighteen males and ten females: minor offences, fifty-eight males and twenty females. Of the latter sixteen were old vagrants.

There were fifty-six less committals this year than last. The books were properly entered up.

WALKERTON GAOL.

	1895.	1896.	1897.
Prisoners committed during the year	113	107	105
Greatest number confined at any one time	23	13	16
Number of re-committals	36	44	25
Total cost of maintaining gaol	\$2,029.05	\$3,127.74	\$2,192.73

I instructed Mr. Nicholson to make an inspection of this gaol, a copy of his report is annexed:

I made an inspection of this gaol on the 1st June, and found it in excellent order throughout.

There were seven male prisoners in custody—no females. Two waiting trial, shooting with intent and burglary, respectively; one under sentence, giving liquor to Indians; the others were vagrants. Since the 1st October seventy-eight prisoners had been committed.

There was an ample supply of clothing on hand.

The plumbing, drainage, etc., are very complete, making the sanitary condition of the building very satisfactory. Electric lights should be placed in the gaol and the use of coal oil dispensed with.

The books were properly entered up. The entries in the surgeon's book showed regular visits.

I instructed Mr. Mann to make the second inspection of this gaol, a copy of his report is annexed:

The Walkerton gaol was inspected by me at your request on the 16th September, 1897. I found ten prisoners in custody, who were committed for the following offences, viz.: - Males, nine—larceny two; vagrants, four; drunk and disorderly, one: manslaughter, one; insane, one: and one female as a vagrant.

Electric lighting has not yet been introduced into this gaol.

The general condition of this gaol was very good.

Supplies are purchased by tender and the quality of food was good.

Books were entered up and properly kept.

WOODSTOCK GAOL.

	1895.	1896.	1897.
Prisoners committed during the year	195	232	184
Greatest number confined at any one time	42	27	26
Number of re-committals	81	87	83
Total cost of maintaining gaol	\$3,198.64	\$1,309.76	\$2,921.99

Copies of my reports to the Government upon this gaol are annexed:

I made an inspection of this gaol on the 19th May. There were then in custody fifteen male prisoners—no females—One was committed for murder, two for drunkenness, two for assault, one for horse stealing, seven for vagrancy, and one for indecent assault. One was insane.

There were twelve suits of clothing in good order. The supplies are mostly purchased by contract and the dietary is according to the gaol regulations.

A new house for the turnkey is being built, convenient to the gaol, and is nearly completed. The general cleaning and repairing of the gaol will be proceeded with as soon as the turnkey's house is finished.

The second inspection of the gaol for the current year was made by me on the 16th October, when it contained only four prisoners (males). One was insane and the others were committed for minor offences.

The corridors, eells, beds and bedding were clean and in good order. There were fifteen suits of prison clothing in good order.

Welland Gaol.

	1895.	1896.	1897.
Prisoners committed during the year	240	376	259
Greatest number confined at any one time	48	55	55
Number of re-committals	101	120	90
Total cost of maintaining gaol	\$3,249.65	93,292.42	\$3,070.00

Copies of reports made to Government by me upon this gaol are annexed:

I made an inspection of the Welland gaol on the 9th June and found twelve male prisoners in custody—three committed for vagrancy, one for larceny, one for carrying unlawful weapons, five for trespass, and two for being drunk and disorderly—The prisoners are employed at sawing wood.

The general condition of the building was good. It is supplied with electric light and town water.

The food supplies are partly contracted for. There were thirty-five suits of clothing in good order. Books well kept.

I made another inspection of this gaol on the 31st August. There were eight males in custody on that day, committed as follows:—Assault one: larceny, two; forgery, one: burglary, one: vagrancy, two: insane, one.

I found the premises clean and in good order. There is good drainage and ventilation. Thirty suits of clothing were in good order. The books were entered up.

WHITBY GAOL,

	1895.	1896.	1897.
Prisoners committed during the year	59	55	60
Greatest number confined at any one time	11	16	20
Number of re-committals	23	21	20
Total cost of maintaining gaol	\$1,961 .33	\$2,014.85	\$2,100.82

Copies of my reports made to the Government upon this gaol are annexed: I made an inspection of this gaol on the 20th March.

There were in custody on that day fourteen men and one woman. The woman and nine of the men were vagrants: of the others, one was committed for arson, two for larceny, one for indecent assault, and one charged with insanity.

The gaol was in good condition generally. The heating and drainage are very good, but there is poor ventilation.

The dietary is according to regulations. The supplies are partly contracted for. Five suits of clothing were on hand in good order. The books were well kept

This gaol was inspected by me on the 13th November. There were nine male prisoners in custody on that occasion, committed as follows:—One for larceny, three for vagrancy, one for indecent assault, one for aggravated assault, one for rape, one drunk and disorderly and one insane.

The general condition of the premises was satisfactory. The prisoners break stone and saw wood. Six suits of clothing in good order. Food supplied according to regulations. Books properly kept.

MATTAWA LOCK-UP.

I made a second inspection of this goal on the 2nd November when it was being cleaned, white-washed and fixed up for the winter.

I ordered tenders to be asked for the supply of fuel for heating the court house and gaol. Sixty cords of hardwood and twenty cords of soft wood will be required.

Some of the hot air ducts do not work satisfactorily and stoves have had to be placed in the gaolers quarters in consequence.

A great saving in fuel would be effected by putting double windows on the building. A hand-pump is required for forcing water into the water tank. The old second hand pump formerly used is broken.

SUDBURY LOCK-UP.

There was only one prisoner in this lock-up when I visited it on 30th October This man's offence was cruelty to animals.

The cells, beds, bedding water closets and yards were in good order. Drainage and ventilation good. Eight suits of clothing in good order. Books properly kept.

NORTH BAY LOCK-up.

I visited the gaol again on the 3rd November. There were then in custody five men and one woman. One of the men was a lunatic and the others were committed for larceny, two: forgery, one, and trespass, one. The woman was a prostitute.

Hot water heating was being put in, and painting, etc., being done. The drainage is not very good. Electric light is in use. Food supplied according to regulations. Ten suits of clothing in good order. Books properly kept.

GORE BAY LOCK-UP.

There were no prisoners in charge when I inspected this lock-up on the 21st June. The building was clean. The outside woodwork requires painting. I requested the gaoler to get a tender for this work and forward it to the department together with tenders for the season's supply of wood—about five cords.

LITTLE CURRENT LOCK-UP.

I made an inspection of this lock-up on the 28th of June. No prisoners in custody. Fifteen cords of wood will be required for the coming year, and I requested the gaoler to obtain tenders for same, to be forwarded to the department.

The flooring in the women's day-room requires fixing; also a well is very much needed for the supply of water. This also is to be tendered for.

Tenders were forwarded to the Public Works Department for the erection of a house for the gaoler, convenient to the gaol, the lowest tender being \$1.090. Stone piers instead of cedar posts under the main part of building, and cellar to be under the kitchen.

MANITOWANING LOCK-UP.

I inspected this lock-up on the 28th June. No prisoners in custody.

The roof of building at the rear requires shingling. I instructed that tenders be obtained for the work and forwarded to the Department. Half a dozen common chairs are needed. The floor should be painted and a cook stove is required for the winter.

HUNTSVILLE LOCK-UP.

I inspected this lock-up on the 29th October. Its general condition was very satisfactory.

Some repairs to the furnace were ordered to be made. The well requires cleaning out, and next year a new fence will have to be built around the grounds.

The food supplies are bought as required. Seven suits of clothing were in good order.

There were no prisoners in custody on this date.

FORT WILLIAM LOCK-UP.

My annual inspection of this lock-up was made on the 30th June.

There were two male prisoners in custody.

The building was in good condition and the beds, bedding, corridors, cells, yards and water closets were clean and in good order. Good drainage and ventilation. Well water supplied. Food according to regulations, bought as required, Twelve suits of clothing in good order. Books properly kept.

A small kitchen is required for the gaol and should be provided at an early day.

Since the 1st October sixty-two prisoners have been committed. The committals range from one to eleven prisoners per day.

BURK'S FALLS LOCK-UP.

I inspected this lock-up on the 29th May. No prisoners in custody. The building was clean and in good order, also the yards and water closets. Well water supplied. Four suits of clothing in good order. Books well kept.

Two broken bedsteads were ordered to be repaired by a blacksmith. I would recommend that six electric lights be placed in the building, as it would be much safer from fire than with coal oil lamps now in use. A fence should be built around the grounds.

STURGEON FALLS LOCK-UP.

I inspected this lock-up on the 30th October. No prisoners in custody. The building was in good order. A fence is required to enclose the grounds. No clothing required.

MASSEY LOCK-UP.

This lock-up was empty of prisoners when I visited it on the 30th October. It is not much used.

Webbwood Lock-up.

I inspected this lock-up on the 30th October and found it in good order. Well water is used, and food supplies are bought as required. No clothing on hand. A fence is required around the grounds.

Thirty-one prisoners were confined in the lock-up during the year. There were no prisoners at the time of my visit.

FRENCH RIVER LOCK-UP.

I instructed Mr. Aikens to make an inspection of this lock-up, a copy of his report is annexed:—

I inspected French River lock-up on October 1st. The class of persons committed to this building are of a rough class, and in consequence the structure has been badly abused. The door leading through the wall has been forced open by an escaping prisoner, and in its present shape it sags down and could be easily broken open. The wall above the cell door should be strengthened by bolts put in from the inside, and better locks are necessary. An ordinary carpenter or blacksmith could do all this work with little cost, and when the village is populated again next spring it should be done.

TWENTY-FOURTH ANNUAL REPORT

OF THE

INSPECTOR OF PRISONS AND PUBLIC CHARITIES

UPON THE

CENTRAL PRISON

AND REFORMATORIES

OF THE

PROVINCE OF ONTARIO,

BEING FOR THE YEAR ENDING 30TH SEPTEMBER,

1897.

CENTRAL PRISON.

INTRODUCTION.

The committals during the year were 598, which with 380 in custody the 1st October and one recaptured, makes up the total number incarcerated during the year 979, as compared with 999 the previous year. Only in five other years since the prison opened have the committals been so few in number, while the average population 398 is the highest the prison has ever known. This is accounted for by the fact that during the whole history of the prison down to 1896, the average period of sentence is six months, twenty-two days, and during the present year the average is nine months: the longer period of detention having the effect of increasing the average population by twenty, notwithstanding the large falling off of sixty-eight in the number of commitments. The falling off in the number of commitments in the present year, it will be seen is most marked, and as the commitments for vagrancy are of almost equal numbers in each of the two years, the indications would seem clearly to point to a diminution of crime within the province. There has been a most gratifying falling off in the number of vagrants committed during the last three years, the average per year being fifty-six, as compared with 121 the average of the three preceding years. The uneducated represent 14.35 per cent, of the total number committed as compared with 12.58 per cent. in 1896. The intemperate constitute 67.45 per cent., and those reported temperate, 32.55 per cent. of the total commitments. The total stay of prisoners was 145,437 days, an excess of 4,297 days as compared with 141,140 days of the previous year. The gross per capita cost per diem for maintenance is (39 1-10) thirty-nine and one-tenth cents against (44.8) forty-four and eight-tenth cents for 1896, a decrease of (5.7) five and seventenths cents. The total cost of maintenance outlay for the year is \$56,806.24, as against \$63,777.77 of the preceding year. The net earnings of industries amounted to \$24,690.59, thus reducing the net cost of maintenance to 22 cents per diem, the cost per annum to \$80.69, and the total net cost for the year to \$32,115.63 as compared with 26 6-10 cents, \$97.27 and \$37,610.89 respectively for 1896. The following tabulated statements show the results of the industries in operation at the prison for the year:

The industries have been charged during the year with upwards of \$4,500 for improvements to the industrial plant, and for fire insurance as a part of the running expenses. There has been a further charge of \$2,281.78 for gratuities paid to prisoners. There has also been a loss of \$1,126.53 as a result of the outbreak of cholera at the piggery, and after providing for all these charges the net gain on the year's business is \$24,696.59 as compared with \$25,661.73 of the previous year. During the last three years the steam plant has been entirely remodelled, and while there has been an increase of twenty per cent. in the amount of power required to operate the industries on account of their increased extent, and an advance of 18½ per cent. in the market price of coal, there has been a saving made of over \$3,000 per year in the cost of fuel consumed. A comparison of the industrial operations of the prison for the five years ended 30th September, 1892, with the subsequent five years will afford evidence of their improved condition. For the years 1887 to 1892, the industrial results were as follows:—

STATEMENT OF INDUSTRIES FOR 5 YEARS ENDING 30TH SEPTEMBER, 1892.

,	

To stock on hand, beginning of period. "outstanding accounts " expenditure for the period. balance, net gain	\$14,006 22 13,953 50 229,775 84 67,017 63 \$324,753 19

The following are the results for the succeeding five years:—

STATEMENT OF INDUSTRIES FOR 5 YEARS ENDING 30TH SEPTEMBER, 1897.

Dr.

 Cr

By sales for the period	ξ690,806 07 67,984 73	
occorded manay costs of period		\$758,790 80

In the first five years there were gratuities paid out of the industries to prisoners, amounting to \$6,141.00, and in the second five year period, \$9,125.60, which amounts are in addition to the net earnings shown. It will therefore be seen that the net earnings, including gratuities, during the second five years, exceed those of the first by 53 per cent., and by a total of \$38,642.10. The dealings of the industries with the prison in respect to maintenance supplies are necessarily of considerable amount, and were the prison charged higher rates for supplies furnished in the one period than in the other, the effect would be to swell the net earnings and to increase the cost of maintenance for that period, as compared with the other. In the first five years the average cost of maintenance per capita per annum was \$185.76, and the average per capita earnings of

the prisoners were \$38.16 per annum. In the second five years the average cost of maintenance was \$163.57, and the net earnings of prisoners \$55.06. To make still another comparison, the total net cost of maintenance the first five years, with an average population of 351, was \$259.180.83, and for the second five years, with an average population of 373, was \$202,396.36, or a saving in the second period, as compared with the first, of \$56,784.47, and if the difference in population is taken into account, the saving is equal to \$72.282.47. From these comparisons there can be no doubt that the management of the prison has much improved in point of economy, in the last quinquennial period, while the discipline, reformatory efforts and influences have been fully maintained.

PRISON ENLARGEMENT.

The number of cells is again quite insufficient for the prison population. The total number of cells is 410, and the maximum prison population in the present year is 447. During nearly four months of the year, the population is in excess of the number of cells and for a considerable portion of this time, it has been necessary to place as many as 74 prisoners, two in a cell. Such a condition as this in prison practice is in the last degree undesirable, as the tendency is to engender vices the most odious, to neutralize all reformatory efforts, and to cause a pestilence destructive to all morals to overspread the prisoners. In addition to the inadequate cell space, there is likewise insufficient hospital and also school accommodation.

In the hospital there is no proper provision for the separation of patients-In some cases there are epileptics, and it should be possible to treat them without disturbing the sick room where quiet and rest is essential to the recovery of the patients. There is always a liability of contagious diseases being introduced into the prison, and in such an event there are no means of isolation. The hospital should be enlarged so as to admit of separate rooms for the treatment of patients, and of an isolation ward in case of contagious disease appearing amongst the prisoners.

As to the school accommodation, there is an average of 55 prisoners who are without education. These of course are of all ages, but 61 per cent. are 30 years and under; 30 per cent. are between 40 and 50, and 9 per cent. are over 50 years of age. Nearly all however of every age appear anxious to learn. The schoolroom is too small to accommodate so large a number, is most unsuitably located for light and ventilation, and is inadequately equipped for purposes of instruction. The increased room for these several purposes can be made at a moderate expenditure. One hundred additional cells would be required, and can be provided by extending the present wings, or by adding another tier of cells to the present cell blocks. The hospital and school accommodation can be obtained to as large an extent as necessary by using the warden's quarters and providing him with a separate residence on the grounds. The total cost, including the warden's residence, would not exceed \$25,000. If the Central Prison maintains its high reputation as a model penal institution, it is likely to continue to influence the courts when sentencing those convicted of serious crimes and where there is a hope of reformation, to a full term in the Central Prison, rather than to a longer term in the penitentiary, where the influences for the up-building of character are not nearly so good. It therefore may be expected that the prison population will continue a growing one, and that an enlargement of the prison accommodation cannot be long deferred.

FIRE LOSSES.

In the month of August last, a fire caught on the outside of the roof of the warden's residence, partly consuming the roof before it could be extinguished. The fire occurred in the afternoon when a strong wind was blowing from the north-west, and must have caught by a spark from a passing locomotive, finding its way under the iron covering the slate at the ridge of the roof where it came in contact with the wood work and igniting the cobwebs and dust collected there, set the roof on fire. There were no electric wires in or near this part of the building, and there is no other reasonable theory to account for the accident. A second fire in the month of October last, broke dut in the broom shop, which no doubt was caused by a spark from the overheated journal of a fan located in the drying kiln. This fire also occurred in the early part of the afternoon, and proved seriously destructive. The broom shop and contents as well as a quantity of lumber were completely destroyed. The fire spread to the cordage shop, partly destroying the roof of this building, and doing considerable damage to the cordage machinery. The loss on the cordage shop and contents amounting to \$3,423.80 was covered by insurance and has been paid. There was no insurance on the broom shop and other property destroyed, and it is expected the loss will total \$12,000. The roof to the cordage building has been restored, and the machinery is again being put in order. Temporary quarters have been found over the machine shop for the broom making, and it is expected by the first of February next the broom shop will be completely rebuilt and in full operation.

Domestic.

The discipline of the prison throughout the year has been well maintained. The premises inside and out have been kept clean and orderly. The food supplied has been of excellent quality, while the health of the prisoners has been good.

RELIGIOUS AND EDUCATIONAL.

The religious and Sunday-school services have been attended with unremitting devotion by both clergy and teachers, and the night-school has profited by the efficient services of teacher Spencer. The reports in connection with these services are herewith transmitted.

(Signed) JAMES NOXON, Inspector.

WARDEN'S REPORT.

TORONTO, October 13th, 1897.

Mr. James Noxon, Inspector of Prisons, etc., Toronto:

Sir,—In submitting the report of the Central Prison for the past year, it will be necessary to retrace some ground already trodden for the reason that a deaf ear has been turned to it. For years past, the late Surgeon Aikens, later acting Surgeon Aikens, and now Surgeon Sloan have called attention to the inadequate and defective hospital accommodation. If it were possible to further emphasize this pressing need, I would do so. Some day it may be learned that it is both easier and cheaper to prevent than cure.

It will be observed that, while the number of commitments have decreased, the average population has increased, which shows the tendency to longer sentences.

We are promised by the Minister of Justice, at the next session of the Dominion Parliament, the Intermediate Sentence. This implies longer sentences to habitual criminals and will be a potent factor in increasing our population. At present our accommodation is taxed to the utmost and more room is absolutely essential.

The statistics this and every year, show the greater part of our inmates are young and at an age when education should be an important factor in reformatory efforts. Our school room is twenty by thirty feet with seats crowded in for only fifty, with a school population of nearly two hundred. It is situated in the interior of the building without a window or ventilation. We have to use gas all the year for light. Fancy, if possible, the intense heat of last summer, fifty men in the room I have described and the condition of the atmosphere. It is simply impossible for teacher or pupils to do themselves justice. A glance at the causes and developement of criminal character urge with an emphasis my poor words cannot express, the best educational influence we can command. Our equipment for this work compared with the amount we should do, compels one to frankly state that in this respect we are not doing our full duty for lack of facilities. The proper hospital and school accommodations can be provided at a very small cost.

The financial statement shows the per capita cost of maintenance for the past year to be \$142.72. This is the lowest in many years past, but we cannot be expected to maintain this rate with the rapidly advancing markets for maintenance supplies.

There were no escapes during the year. The efficiency and zeal of the staff is most commendable. The industrial equipment of the prison is quite satisfactory.

If we had the necessary cell, hospital and school accommodation, coupled with the Intermediate Sentence, we would be in a position to do better work with, I hope, better results.

Let me urge through you the Government, to give this subject the consideration and action that its importance merits.

Please find accompanying statistical report, Surgeon's report, School Teacher's report and the Chief Engineer's report.

I have the honour to be, Sir, your obedient servant,

J. T. GILMOUR, Warden.

Educational	Stalus,		•
Could read and write	498 15 86 — 599	12,134 1,178 2,318	15,630

The prisoners received during the year who were reported to be of temperate habits represented 32.55 per cent. of the commitments: in 1895 the percentage was 23.12, and 1896 24.33 per cent.

The total uneducated men represent 14.35 per cent. of the commitments of the year, as compared with 12.58 per cent. in 1896.

The table annexed shows how the prisoners were employed, and the number of days' work which was performed by them at the different industries:

		1896	ს .	189	7.

SURGEON'S REPORT.

JAMES NOXON, Esq.,

Inspector Asylums, Prisons, etc., Ontario.

SIR,—Although only acting Surgeon for the past four months, I include in this report the entire year, the general tenor of which appears to have been very similar to the time during which I have acted.

The general health of the prisoners has been good, few serious cases occurring; two or three mild attacks of *Grippe* during the year, and a number of cases of dysentery in the last two months, not severe in character, and yielding readily to treatment.

There have only been two deaths this year, one from acute congestion of lungs, and one from pneumonia, the latter an old man seriously ill with the disease at the time of admission.

Not many severe accidents have occurred. Several fingers and toes have been amputated: part of a hand was removed, the result of an injury by machinery, and one prisoner broke his by trying to escape.

The Prison has been remarkably exempt from epidemic or contagious diseases during the past year, a most fortunate circumstance, in view of the very inadequate hospital accommodation, while for isolation purposes, there is none at all.

I cannot do better in this matter than refer you to the report of Dr. Aikins, my predecessor of last year. The facts set forward by him in 1896, are still facts in 1897. The inadequacy of the accommodation of last year still remains, and the need of a change in this matter is apparent to any one examining into the circumstances.

I wish to bring before you the condition of the upper flat of the north shop, in which nearly fifty men are employed. A portion of the floor area is used as a varnish and paint shop, the fumes from which are very injurious to those obliged to inhale them, as the men have to do when the windows are closed in winter, there being no other ventilation. There ought to be two ventilators, one in the paint shop proper, and the other in the centre of the remaining space. The expense would be trifling, only one floor to cut through, and the men could do the work themselves.

I hope that the change can be made before the onset of winter. I append the usual statistical table of treatment at the prison surgery.

I wish to acknowledge the kindness of the Warden for his professional assistance in difficult cases.

All which is respectfully submitted.

I remain.

Yours truly,

W. SLOAN,

Surgeon.

TORONTO, Oct. 7th, 1897.

REPORT OF CENTRAL PRISON SABBATH SCHOOL.

TORONTO, NOVEMBER 13, 1897.

The Inssector of Prisons, etc.,

Parliament Buildings,

Toronto.

SIR,—I have the honour to present the annual report of the work carried on in the Sabbath School at the Central Prison for the year ending 30th September last.

The average attendance of men has been slightly larger than during the preceding twelve months, and the average attendance of teachers slightly less, the average for this year being, teachers 31, scholars 235.

There were no marked features in connection with the work of the past year to which attention needs to be specially called. All engaged in the work are glad to be so occupied, and are much encouraged in their labours.

As has always been the case we have experienced nothing but the greatest courtesy on all occasions from the Warden and other officers of the Prison.

I have the honour to be,

Sir,

Yours respectfully,

HAMILTON CASSELS,

Supt. C. P S. S.

AGENT'S REPORT.

Having completed my first year's work as your agent I would respectfully fubmit the following report:—

As the greater part of the work was entirely new to me there has been much to learn. I have, at all times, viewed the work from two standpoints: Firstly, the moral condition, and secondly, the temporal welfare of the prisoners. I have given practical aid when needed and deserved, and have ever tried to use my influence among the men so as to point out to them that it is better to acquire a living by honest means than by crime.

All the men who have gone out have been visited previous ta their discharge, and have been met on the morning of their release. Many have been assisted either by way of meals, lodgings or loans, as each case required, according to my knowledge of the men. I may say here that the prison officials, both at the Central Prison and the Toronto Jail, have given me much assistance, by way of information regarding special cases, and have at all times shown great interest in the affairs of the Association, and exhibited toward your agent an appreciable courtesy in the discharge of his duties. The families of prisoners have been visited by me when so desired by the prisoners.

In January last, through the aid of Warden Gilmour, I organized and arranged for a men's prayer meeting. I began with seven men, and the average attendance now is about twenty-five. The results of the work done by the sabbath School teachers, and the ministers who attend on Sunday, is probably best ascertained by a visit to this meeting. The influence of the men who attend has been silently at work upon others, and I think we can safely say it has become the starting point with many towards living a new and better life. I have had valuable assistance in this new department from Mr. Wardell, Mr. Bates and Mr. Simpson, who are much interested in this meeting, and who are regular in attendance. An important influence for good upon the men in the prison-is the evening school, which is well attended, and which is conducted four nights in the week. More could not be accommodated on account of lack of room.

I regret that I have not been able to secure work for more men, but my inability has been due to the fact that the employers of labour were inclined to keep down expenses by carrying on business with as few hands as possible, rather than giving work to those out of employment, showing a preference to others than prisoners. I find among those who are unfortunate enough to get into prison a desire to stop in the city, or go to some other city, rather than go to the country to look for work. This we discourage as much as possible.

Before closing my report I wish to express my thanks to the several publishing houses for their liberality in supplying bibles and other literature for the use of prisoners.

FINLAY SPENCER.

CENTRAL PRISON NIGHT SCHOOL REPORT.

The work in connection with the Night School in the Central Prison has been carried on continuously, four evenings each week, during the year, excepting two weeks in August, the attendance of those registered being very regular, while the interest manifested and progress made are quite satisfactory. The conduct of the prisoners in school has been most commendable.

The principal subjects taught are reading, writing and arithmetic, while spelling, geography and literature, as met with in the "Readers," receive a fair share of attention.

The average attendance for the year was 76.20: the highest monthly average attendance was 85.57 and the lowest 66.30.

The Senior Division, including those reading in the Third and Fourth books, meets on Tuesday and Thurs lay evenings, and the Junion Division, including those reading in the First and Second books, meets on Wednesday and Friday evenings. The Senior Arithmetic class is working problems in percentage as met with in commissions, insurance and brokerage.

Special mention should be made regarding the Junior Division. During the year I have had a goodly number of young men register who have never had an opportunity of attending any school, while others have forgotten what they learned at school several years ago.

I am pleased to report that most of these men are not able both to read and write. Hence the effort put forth in behalf of this class is of great importance, inasmuch as it opens up to them new avenues for thought and places them in a

position to acquire useful knowledge after their discharge. Moreover, the work of reformation is made easier as it is almost impossible to reform the lives of men who are groping in mental darkness.

I would strongly recommend the extension of the school work among the This, however, is impossible, on account of the lack of proper accom-The present school room is altogether too small to meet the requirements of even those who new attend, while its location is such that it is impossible to ventilate it, or to regulate the temperature in winter or summer. The air becomes stifling and even offensive before the evening's work is completed, to say nothing of the effect upon the health of pupils and teacher. Further, the school is not infrequently interrupted and the attention of the class distracted by the noise and excitement occasioned by the arrival of new prisoners, who are, for want of a better place, searched and registered in the hall adjoining the school-room.

Before closing my report I desire to acknowledge with thankfulness, the interest taken in the school by the Warden, Dr. Gilmour, who is a frequent visitor, and those members of his staff with whom I am more intimately associated in the prison. I also wish to thank the guards for their valuable assistance.

> FINLAY SPENCER, Teacher

ONTARIO	REFORMATORY	FOR	BOYS.

ONTARIO REFORMATORY FOR BOYS.

There is a gratifying falling off in the number of commitments attended by a large reduction in the average population as compared with former years, as will be seen by the following summary:

	No. of commitments.	Apprenticed out.	Reprieved.	Average population.
1890 1891 1892 1893 1894 1895 1896 1897	63 63 67 62 50 57 55 37	10 13 10 5 9	32 31 38 16 11 21 22 24	209 205 178 170 158 150 150 132

The number apprenticed out and of those reprieved, the present year a total of thirty-three is nearly equal to the total of thirty-seven committed. The same causes continuing to operate to the same extent, and in a few years the Reformatory will be almost without occupants. The number in residence, 123, at the close of the year is the lowest on record, and is in marked contrast with the highest number, 263, in 1882. Since 1890 the falling off in population has been continuous and rapid, which would appear to indicate that the causes operating in restraint of commitments to the Reformatory, have brought about a condition that calls for the adoption of a more comprehensive system of dealing with all classes of juvenile delinquents. The majority of the boys committed are of the ages of fourteen and fifteen years. The religious and secular education of all is attended to with care, but their physical and industrial training is deficient, because there is no proper equipment or organization in these departments necessary to secure efficiency. The institution from its location is deprived of nearly every essential to industrial training. Were it situated where the surroundings and the business facilities are more favorable, its interests in every department of work would be greatly promoted. The general decipline is excellent and a characteristic of it is the feeling of honor and of manliness instilled in the minds of the boys by which obedience to rules is chiefly maintained. The health of the boys has been exceptionally good.

The buildings have been kept in good repair and all apartments have been maintained in a condition of neatness and cleanliness. The grounds, including the garden, are cultivated with much taste and beauty. The farm, that portion capable of cultivation, is rough and unsubdued, but in favorable seasons produces a corsiderable quantity of roots and fodder. It is expected that by care-

ful attention to more systematic cultivation, the land will be cleared of weeds and brought into a condition of greater productiveness. The total cost of maintenance is \$31,601.32, and per capita \$235.82, as compared with \$34,633.48 and \$230.88 of the previous year. The high rate per capita is owing to the low average of population, and attention is directed to the report of the Superintendent, which deals very fully with the bearing the average of population has upon the apparent economy or otherwise of the cost of maintenance.

JAMES NOXON,

Inspector.

ONTARIO REFORMATORY FOR BOYS.

The summary given below shows the operation of the Reformatory during the year as well as in the two preceding ones.

REPORT OF SUPERINTENDENT.

From the statistical tables now in your hands, it will be observable that the falling off in population is still of a marked character; and that in no year since confederation has the average for the year or the number in residence at end of of year been so low; or with one exception, 1873, have the commitments been so few, thirty-nine representing the total number received during present year.

In the annual reports for 1894 and 1895 we endeavored, in some part, to account for the marked decrease of juvenile crime in this Province. In so doing attention was called to the leading, or rather the all important agencies contributing to this desirable result. Besides those then referred to there have been

other co-operating agencies tending also toward the lessening of the number of commitments; these are, the *suspended sentence*, and the *private investigation* before the judge or police magistrate.

The suspended sentence gives the offender, probably a giddy, waywary and, to some extent, neglected lad, opportunity for self-examination and thoughtful reflection. These mental processes—unless the boy has a natural tendency toward crime—will awaken him to a sense of his wrong-doing and stimulate him also to so conduct himself in future so that the pending sentence will virtually be avoided.

Past and present experience convinces us that many, we might say the majority, of the lads who have passed through our hands during the past eighteen years have, through the neglect or rather the criminal carelessness of their parents, been permitted to acquire loose, irregular habits and thus drift into bad companionship and evil ways. In many such cases—although, apparently, there were no inherent criminal tendencies, yet the outcome of this particular neglect and the consequent evil associations, was law-breaking in greater or lesser degree. In committing these offenders to the Reformatory, for a fixed or for an indefinite period, the agents of justice would have the conviction that the institution was fully equipped for the work in hand and that every needful agency, moral and material, was available to insure their complete reclamation from vicious habits and also rehabilitate them and rebuild their character in such effective manner as that, after a reasonable sojourn here, they would be capable of making their way in life, honestly and respectably.

Let us presume that this point in character building has been reached: What Recognition of their merits is next in order. And what then? The opportunity to prove their worthiness and their qualifications for honest, capable citizenship. How is this to be accomplished? Why simply by procuring for them the coveted opportunity to prove themselves worthy. This means their liberation, and the affair ends in our seeking and securing pardons year after year for many meritorious and trustworthy lads. But this compels another view of the question, for by moving for the release of the class of boys described and by succeeding in our efforts in that direction, we further reduce our already depleted population and thereby increase the per capita rate in respect to those remaining in residence. Worthy and disinterested motives only actuating us regarding those whose liberation have been secured it may be asked: Why worry? The query seems reasonable, but when it has to be acknowledged that the rate per capita is seemingly the standard in respect to efficiency and good management one might be tempted to criminally overlook, or rather ignore, the claims of the meritorious and thus lead to their detention until termination of sentence and by such unholy action keep up the population to the utmost figure and, per contra, reduce the per capita rate.

This year, as shown by the statistical tables, thirty three boys were in appreciation of their general good conduct, released before expiry of sentence. The tables for 1896 show, that under similar conditions, twenty-seven were released, and those of 1895 also show that twenty-eight were liberated, and in all during the three years specified eighty-five boys had achieved freedom. Now had we thought more of showing efficiency in management, the rate per capita evidently being the standard, sixty at least of those released would still be held here, consequently instead of 134 boys only being at end of present official year 194 would have been the number. Presuming that those sixty had been detained (such presumption in itself being almost a crime), the gross extra expenditure in respect to their clothing, food, medicines, etc., would have been in the neighborhood of

\$3,000. Let this sum be added to the \$31,632, the gross sum expended this year, (cents not counted); \$34,632 would be produced. Divide this latter sum by the presumed, and probable number, 194—did regard for dollars and cents solely prevail and all consciousness of sacred duty be warped and destroyed—the rate per capita would be \$178.52 as against \$235.82, the actual rate for this year. To ensure such reduction in the per capita cost \$3,000 would, in such instance, have had to be expended. The management only should be disturbed by increased rates per capita: the public or its representatives should rest easy, as the gross annual expenditure decreases in the ratio of the per capita increase.

The great bulk of the annual total expenditure—over two-thirds—is, as you are aware, in great degree, uncontrollable; light, fuel, water and salaries being the main items in this category. With a little addition to the salaries account as it now stands, say \$700, represented in the person of one man added to the permanent staff, and of one relieving guard, we could, in respect to the other items enumerated, even with our present equipment, provide for the handling of over 250 boys: the only additional cost being the rations, clothing, etc., and some extra bedding. Had we this number, or a number in reasonable approximation thereto, the average annual per capita rate would be as low as in 1853-\$163.27 -but the total annual expenditure by the Province would be increased by over \$10,000. Some of our expert financial economists will stolidly overlook this increased annual expenditure, but will concentrate all their energies in loudly wailing over increased cost per capita, their tears blinding them to the fact that for every \$10 the latter are reduced thousands are added to the former. The saving of thousands, aye, tens of thousands of dollars annually in the gross expenditure by the reduction of our population in the manner described in one of the preceding paragraphs, and for the reasons there set forth, apparently does not count. To reduce by a few dollars the per capita rate, judging by recent platform utterances, would, by a certain order of economists, be most acceptable, and evidently would be considered by them as fully compensating for the extra annual outlay of the thousands requisite to ensure this reduction. To meet the views of such economists two things are needed; (first) the establishment of a propagandism whereby the majority of the juvenile population of the Province between the ages of thirteen and sixteen will be converted into criminals; and (second) to see that the propagandists chosen will so effectually perform the work entrusted to them that when the Reformatory has been filled with their perverts the perversion will be of such complete character as that all efforts put forth towards their reclamation will prove abortive, and thus ensure their imprisonment until termination of full period of sentence. By these means the rate per capita will be reduced to the minimum standard. Of course no account would be taken of the largely increased annual outlay thus incurred. Here let me say, parenthetically, that to myself and staff it is just as easy to handle and look after 270 (we have had that number for months, in the early eighties, under our care) as it is to see to the 121 at this moment in residence.

Just one example in relation to the above. In 1883 the salaries account was only \$700 less than the same item for this year; yet, owing to the population averaging during the former year 255, the per capita rate was \$60.76. This year the average number being only 134 this rate, in respect to the same account, is \$120.26, double, less five cents, that of 1883. The gross expenditure this year is 831,601.32; in 1883 it was \$41,600.33, but the difference, \$10,000, or to be arithmetically correct, \$9,999.01, saved to the Province by the improved moral condition of its juvenile population is, seemingly, not worthy of consideration by financial critics of the economist order.

Statistics relating to the per capita rate of the state institutions of the neighboring republic are sometimes quoted in order, by comparison, to shew that the provincial institutions are extravagantly and carelessly managed. Below are given a few examples from the latest statistical returns obtainable.

	Average Population.	Rate per capita.
		·
State Industrial School, Colorado.	145	\$ c. 230 69
State Reformatory, Minnesota	135	355 23
Reform School, Washington, D.C.	198	204 90
State Reform School, Maine	100	305 51
Massachusetts Keformatory	758	231 43
State Reform School, Missouri	100	358 41
State Industrial School, Nebraska	275	268 15
	782	203 02
State Industrial School, Pennsylvania	400	342 77
	483	232 47
State Reform School, Rhode Island State Reform School, Wisconsin.	171	224 09
State Reform School, Wisconsin.	396	204 78
State Industrial School, Iowa	400	183 40

The above tables could be further extended but I think sufficient examples have been given to show, that, in respect to rates per capita, more especially when the average number of inmates is considered, we do compare most favorably with the United States institutions similar in character to our institution.

In respect to the extent of juvenile crime in relation to general population, commitments to reformatories being the standard, the comparison is decidedly in favor of this Province. Take Rhode Island, although with a population not one-seventh of that of Ontario, yet it has a larger array of juvenile delinquents demanding reformatory treatment. Wisconsin, with a population less by one-third than this Province, holds in duress fully three times the number of presumed bad boys that we do. Iowa also had a similar number of that class in its Reformatory whilst the population of that State is much below that of Ontario. Minnesota leads us also in the matter of offenders, juvenile, although its general population is about one-half that of ours. Nebraska's State population is hardly one third of ours yet its average reformatory population is more than double our average. These could be carried beyond reasonable limits, more especially in relation to the old States of the Union where the proportion of juvenile offenders is far in excess of the examples cited.

Congratulations in respect to the above very satisfactory shewing would be in order, but as an official position, reputation and responsibility are largely affected through the boys of this fair Province being so observant of the laws of morality and of the Criminal Code, and being so, consequently do not favor our establishment in numbers sufficient to keep down its rate per capita, only in a half-hearted manner can we join in such congratulations.

It is about time, you will say, that we should turn our attention to matters more immediately concerning the Reformatory and proceed to outline in some manner the movements and proceedings of the year just ended. But, as the work of each year closely resembles in its every feature that of the years preceding, it is no easy task to make such sketch novel and interesting. Especially so, after having made such attempt eighteen times in as many years, without satisfying ourselves or giving pleasure to our readers.

The report of the chaplains, that of the school inspector, and those of the school trustees tell their own story regarding the moral advancement and the mental progress made during the year. My own observations leads me to hold satisfactory view's of the year's progress, presuming that the reports noted are held to be of this character: and, if not too presumptious, I have the hope in respect to internal economy and progressiveness, that your observations, during your inspectorial visits, will concide with these. Contentment, the foundation of true progressiveness, has throughout been the rule: discontent, in any shape being a most remote exception.

Besides the usual summer outing to the islands which, as in the past years, was thoroughly enjoyed by the boys, we had opportunity to give them another treat. On Labor day the town fire-brigade organized a procession, also an afternoon entertainment at the skating rink, the boys were invited to take part in these festivities. A base-ball game was also on the programme, the Reformatory nine playing the town club. The day was hot and the roads dusty yet the lads, little and big, joyously marched the three miles intervening between the institution and the town, the brass-band leading, the deputy superintendent and four attendants only in charge. Needless that the treat was enjoyed to the full proof of which was given by their hearty singing in full chorus, during the band intervals, on the way home.

Owing to heavy rainstorms during spring and early summer and the consequent earth and sand washings, our waterways and drains were much obstructed, the latter seriously. In remedying these mishaps and fortifying against their recurrence, the boys engaged at such work had full employment the whole summer.

Farming and gardening operations for the year were productive of satisfactory returns. The root crops especially shewing an abundant yield.

I have the honor to be, Sir,

Your most obedient servant,

THOMAS W. CROPON,
Superintendent.

STATISTICAL TABLES.

Shewing the operations of the Reformatory for the year ending 30th September, 1897:—

SCHOOL EXAMINATIONS.

James Noxon. Esq.,

Inspector of Prisons, Etc.:

Sir,—I have the honor to offer for your consideration the report of my inspection of the schools at the Reformatory for Boys. Penetanguishene. As in former years I visited the schools twice. The same teachers were present, as in 1896, viz., Messrs. McPherson, Machamara and Ferguson. Mr. McPherson had charge of the 3rd and 4th books in the Protestant division and Mr. Ferguson of the 1st and 2nd books, Mr. Machamara taught all the grades in the Catholic division.

The appliances of the different rooms were quite sufficient. Each room had a good blackboard, maps, dictionary, etc.

In May I found 109 boys attending school. These were classified as follows: nine in First Part, Book I., eleven in Second Part, Book I.: forty in Book II. thirty-one in Book III., and eighteen in Book IV. Mr. Ferguson had forty-six of these, Mr. Macnamara twenty-eight and Mr. McPherson thirty-tive. In October there were 102, classified as follows: ten in Part I., eleven in Second Part, thirty-two in Second Book, twenty-nine in Third Book and nineteen in Fourth Book. Mr. Ferguson had charge of thirty-nine, Mr. Macnamara twenty-seven and Mr. Mc-Pherson thirty-six.

At each of my visits I examined the pupils carefully in reading, spelling, writing, literature and arithmetic and found the boys in a satisfactory condition of advancement. The discipline in each division was satisfactory—strict without being unnecessarily severe.

I am. Sir,

Your obedient servant.

ISAAC DAY.

ORILLIA, Oct, 16th. 1897.

PROTESTANT CHAPLAIN'S REPORT.

To the Superintendent of the Ontario Reformatory for Boys:

Dear Sir,—I have very great pleasure in presenting you with my Annual Report as Protestant Chaplain of this Institutions for the year ending Sept. 30th. 1897. I have found the duties that devolve upon me in the moral and religious instruction of the boys under my charge very pleasant: their attention, as a rule, excellent: and the results satisfactory—I desire to bear testimony to the very efficient assistance at all times rendered me by the Organist. Miss Cunningham.

The seven years that I have been here is a sufficiently long time for one to be able to determine whether one's labours produce the desired results: and whether, take the Institution as a whole, the Reformatory does reform. In this regard I have no hesitation in saying that the results far exceed what any reasonable person can expect, from the material that we have to work upon.

I suppose it will be admitted that the Chaplain stands closer to the moral and religious life of the boys, held here, than any other officer. His whole work

lies in that sphere. None so well understand both their need and their progress, along moral lines. In this department the results to my mind are exceedingly gratifying.

One thing that has especially impressed me in any work among these boys, is their responsiveness to the efforts put forth to help them up to a nobler manhood—to a better life. A few there always are here, as there are everywhere, who seem indifferent to all ideas of moral obligation, and who apparently have little desire to lead a moral life. But the greater number, I am happy to say, are not so. This fact is of immense value in our work here, and it is a fact that gives one a more hopeful view of our humanity generally.

The greatest difficulty we find in the permanent reformation of the boys sent here, is not in the failure of one's work upon them while they are here: but in the want of sympathy and the indisposition of people to employ them, and that at a fair remuneration, after they leave here. Given work to do, with reasonable wages, and the future of the larger number of Reformatory boys would assuredly satisfy the most critical person.

Some people may possibly think that the expense account of this institution is very large. That depends entirely, as in any commercial enterprise, upon the output. The trouble is we cannot attach a financial value to every boy that we reform, to every soul that we save. What has the clergy of the country to show for the enormous expense they are to their constituencies but moral and religious results? Yet their work is so important, its results so broad and far-reaching, that no reasonable man calls in question the wisdom of sustaining them. This Institution is planted, not to sell goods, or manufacture sewing machines, or to deal in mining stocks, valuable as are these industries. It is designed for a far higher purpose, viz., to reform and save the bad boys of the Province, and this it is doing at the rate of seventy-five per cent, of the hundreds committed to its care.

I have the honor to be, Sir,

Yours respectfully,

STEPHEN CARD.

Protestant Chaplain.

ROMAN CATHOLIC CHAPLAIN'S REPORT.

Penetanguishene, October 1st, 1897.

Jas. Noxon, Esq.,

Inspector of Prisons, Etc.

DEAR SIR,—I have the honor to transmit to you my eighth annual report as Roman Catholic Chaplain of the Ontario Reformatory for Boys for the year ending September 30th, 1897.

Boys in attendance Occober 1st 1896	43 6
(Time annimal S.)	49
Discharged $\left\{ \begin{array}{l} \text{Time expired, 8} \\ \text{Liberated, 11} \end{array} \right\}$	19
Remaining September 30th, 1897	30

The conduct of my boys has been very good throughout the year.

Nothing has been left undone to advance them spiritually.

It is with great pleasure I pen you a copy of the Superintendent's answer to my note of June 15th, in which I asked permission to celebrate the Queen's Jubilee Day—with my boys—Divine service was held in which they all entered heartily.

JUNE 15th, 1897.

REVD. SIR.—In response to your note of to-day, beg to say that it affords me much pleasure to comply with your request, to have the boys under your charge, assemble in the chapel for divine service at the usual hour, 9.30 to 10.30 a.m., 22nd inst, in order to fittingly commemorate Her Most Gracious Majesty's Diamond Jubilee.

I have the honor to be, Reverend Sir,

Your obedient servant.

THOMAS McCROSSON,

Superintendent.

REVD. FATHER GIBBONS.

Roman Catholic Chaplain,

Ontario Reformatory for Boys.

In the year 1883 a supply of books was furnished the boys. Since that date no new books have been added to the library—outside the Boys' Own Paper and a journal or so—so that the books are in a most pitiful condition.

I respectfully call attention to the condition of the chapel. The ceiling is in a bad state and at any time a serious accident may take place.

The hours of divine service and catechism are: Sundays, 9.30 a.m.: catechism, 2.30 p.m.: morning prayer, 7.30 a.m.: evening prayer, 5.30 p.m.

Once a month the lads are given an early religious service, and all avail themselves to comply with their spiritual duties in this connection.

I have honor to be, Sir,

Yours respectfully.

J. GIBBON, R. C. Chaplain. Ontario Reformatory for Boys.

PROTESTANT SCHOOL MASTER'S REPORT.

October 25th, 1897.

To James Noxon, Esq.,

Inspector of Prisons and Public Charities for Ontario.

SIR,—I have the honor to present the annual report of the Protestent School for the year ending September 30th, 1897:

I have to report progress in the various classes as is shown by the promotion lists. The boys have responded to the efforts on their behalf in almost every

case with commendable zeal. The subjects taught are those of the programme of studies issued by the Education Department, particular attention being given to those subjects that will be most helpful to the boys in after life.

Discipline has been maintained, fewer references for punishment having been made to the Superintendent than in any previous year for breaches of school discipline.

It will be noticed in the total number of boys enrolled, a decrease of (8) eight, as compared with the previous year in the Protestant School.

I herewith enclose the usual tabulated statements of attendance, etc.

I have the honor to be, Sir,

Your obedient servant,

J. C. MACPHERSON.

Senior Protestant Teacher, Reformatory for Boys.

ROMAN CATHOLIC SCHOOL MASTER'S REPORT.

Ontario Reformatory for Boys, Penetanguishene, October 1st, 1897.

SIR.—I have the honor to transmit the following report of Catholic School for year ending September 30th, 1897:

Nineteen boys belonging to the school were discharged during the year, eight of whom served the full term for which they were sent here, and eleven were liberated before the expiry of their term. Twelve of the nineteen went out in fourth or third classes, and none lower than second class. Some of those who came in were thirteen or fourteen years old and did not know the alphabet.

The public school programme of studies is followed as closely as circumstances will permit, of course the greater time and attention being given to the more useful subject.

The attendance p, position and changes in classes of those in attendance at the beginning sf the year, and all admitted during the year are shown in enclosed tabulated statement.

Christian doctrine is taught to all the classes.

I have the honor to be, Sir,

Your obedient servant,

J. McNAMARA,

Catholic Teacher

MR. JAMES NOXON,

Inspector of Prisons, etc., Toronto, Ont.

ANDREW MERCER REFORMATORY FOR FEMALES AND REFUGE FOR GIRLS.

ANDREW MERCER REFORMATORY FOR FEMALES AND REFUGE FOR GIRLS.

The number of complitments to the Reformatory were 97, against 103 of the previous year. Of the number committed, 44 were intemperate, and 14 could neither read nor write. The number of commitments to the Refuge were 22, against 24 the preceding year. The average population of the Reformatory is 59 1-7, as compared with $55\frac{2}{3}$ in 1896; and of the Refuge, $43\frac{1}{4}$, as against $41\frac{7}{4}$ of the previous year. Combined, the average is 103, against 96 in 1896. The per capita cost of maintenance is \$206.62, as compared with \$226.40; and the cash revenue, \$1,125.99, as compared with \$1,214.44, for 1896. The falling off in revenue is owing to the withdrawal of the Central Prison laundrying, which is now being done by the prisoners at the prison; and new patrons of the laundry have not yet made up the loss of the prison work. The inmates of the Reformatory are not as constantly nor as systematically employed as is essential to secure the best results from their industrial employment. Laxity of system in the industrial occupation of the inmates is certain to be attended with a degree of confusion and disorder destructive to a high condition of discipline. Efforts are being made to bring about some changes from which it is hoped both management and discipline may be improved. Some attention is also being given to a proper classification of the inmates, that those who have not yet become adicted to vice may escape the association and corrupting influence of the hopelessly deprayed.

Refuge for Girls.

There is a very noticeable change in the ages of those now being committed to the Refuge as compared with the commitments of former years. Taking the year 1891 for comparison, the commitments in that year were 25, of whom 7 were under 11 years of age; and in the present year the commitments were 22, of whom none were under 11 years, and only 2 under 13 years of age. With the exception of the two referred to, all the girls now in the Refuge are within the ages of 13 and 16 years. There is great hope in the Refuge were it properly equipped for reformatory work. It should be absolutely shut off in all places and at all times from both sight and hearing of the inmates of the Reformatory. In its system of work it should partake wholly of the character of a reformatory school, with well-trained and highly qualified teachers for the moral, educational and domestic training of its inmates. Thus organized and efficiently conducted, the Refuge would be rich in blessing to the young girls committed to it.

Reformatory.	1896.	1897.

Average number of inmates in 1896 ... 96 ... 1897 ... 103

REPORT OF SUPERINTENDENT.

TORONTO, October 30th, 1897.

JAMES NOXON, Esq.,

Inspector of Prisons, Etc.

SIR.—I have the honor to submit the Seventeenth Annual Report of the Andrew Mercer Ontario Reformatory for Females and Refuge for Girls for the year ending September 30th, 1897. Any remarks or suggestions I have to make on the general workings of the Reformatory will chiefly be to emphasize what I have said in many former reports; that the term of sentence is altogether too short to effect any permanent improvement in the conduct of the more vicious and hardened of our inmates: the average sentences in 1896 was eight months and twelve days, against an average of seven months and nineteen days in 1897.

It gives me much pleasure to state, with few exceptions, the conduct of the inmates has been good. The majority of our women realize the benefit of indus-

try and obedience.

I am still of the opinion that the granting of a small remission of sentence for exceptionally good conduct would be a strong incentive to continued efforts, and would, I feel confident, tend to the maintenance of good order and discipline in the Reformatory.

Our punishments this year with a daily average of 59 inmates numbered 138 days, as against 140 days with a daily average of 55 last year.

Discharged Inmates.

Ninety-nine women were discharged on expiration of sentence:-

Returned to relatives	
" old vicious life	
Vent to Convent of Good Shepherds	
" Industrial Home, North Toronto	
" Haven, Seaton street	
" Salvation Army Rescue Home.	
Situations found by Agent of Prisoners' Aid Association, Mrs. Bellamy	
" Staff of Reformatory	
Staff of Reformatory	

Among the discharged inmates there are many who have never served but one term in the Reformatory: a fair proportion of these are now occupying respectable positions as domestics. Some have been well married; even those who have been here several times, each time they are re-committed we find them easier to control and are more willing to conform to the discipline of the Institution. Mrs. Bellamy, an agent of the Prisoners Aid Association, has given efficient help in the securing of situations for immates about to be discharged. She also devotes every Saturday afternoon to the teaching of those who desire to learn to read and write.

Nursery.

Religious Services.

The usual Sunday and mid-week religious services have been carried on regularly by the ladies. Teachers in the Sunday School, under Mr. McMath's superintendentship. Clergymen members of the Ministerial Association, R. Harvey, Esq., and members of the Salvation Army; Rev. Father F. Walsh, of St. Michael's College, minister to the spiritual wants of the Roman Catholic inmates.

THE CONTRACTOR OF THE CONTRACT	

Repairs and Improvements.

The following repairs and improvements asked for last year were gran and the work has been satisfactorily done, viz.:—Iron sheeted ceilings and paintings in Corridor F, in the hospital and in the staff kitchen; a concrete floor was put in the stable and in the punishment corridor; the doors in this corridor were sheeted with iron; a new horse was bought and the old one sold; a laundry waggon was purchased; gas heaters for heating irons for the laundry were put in; the boiler in the greenhouse was repaired; strong iron screens were placed on the windows of the privileged rooms, and a shaker grate was put in the furnace.

Requirements.

The hoist in use from the staff kitchen to the dining rooms is in a most unsatisfactory state. A lighter, and the more easily worked, would be a great convenience. The floors in the refractory ward and inmates' kitchen require renewing. The halls, cells and corridors are in great need of painting and kalsomining. Kalsoming and painting are also very much needed in the Refuge, especially in the school and work rooms, the floor in the children's dining room is

much worn, also the floor of the main hall leading from the dormitories. A linoleum is required for the front hall in the Refuge, also one in the front entrance of the Reformatory. A carpet for the officer's dining room and uniform for the attendants.

Changes in Staff.

On account of the gradual decrease in the population of the Reformatory the services of three attendants have been dispensed with, Mrs. Edwards, Mrs. Fitzgerald and Miss Sheppard. Miss Collins resigned the position of cook and was replaced by Miss M. E. Madden. Visitors attendant and housemaid, Miss Harriet Farmer, now fills the position of visitors and relieving attendant. Miss Rachael Thompson was appointed housemaid. She was retired in September of this year. Mrs. Down, house-keeper, attends to the duties of housemaid in addition to those of housekeeper.

In conclusion I beg to acknowledge the unfailing support I have received

from every member of the staff.

I have the honor to be, Sir.

Your obedient servant, M. J. O'REILLY,

Superintendant.

TORONTO, September 30th, 1897.

James Noxon, Esq.,

Inspector of Prisons and Public Charities.

RECORD OF DISCHARGED GIRLS.

With one exception the girls discharged during the year, either by apprenticeship or expiration of sentence, are doing well. The exception was a child under thirteen years of age, who was returned from apprenticeship because of feeble health. On the expiration of her sentence of five years she was taken to the Salvation Army Rescue Home. Her mother is unable to provide for herself, had served a term in the Reformatory, and on leaving there was taken to the Haven, where she has since remained. The Superintendent of the Rescue Home finding this feeble little girl too young to remain among the adults usually sheltered there, took her to the Children's Shelter of the City of Toronto. The authorities of the Children's Shelter had her committed to the Alexandra School for Girls.

. One child under eleven years of age was committed to the Refuge during the year. She is weak-minded, and not eligible for adoption or apprenticeship under the Children's Act.

Another child who is weak or feeble-minded, and under thirteen years of age, had completed the term of five years but is still in the Refuge, as she is harmless, her mother being in one of our insane asylums and two brothers at the Idiot Asylum, Orillia. As well as these two cases there are others whose time is not expired who are not only feeble in intellect but vicious in conduct, and therefore not suited for apprenticeship. What shall we do with such girls? To turn them upon the world is not only a menace to society but a cruelty to themselves. I have no hesitancy in affirming that eighty per cent. of the girls of the Refuge who have proved failures and appeared as prisoners in the Reformatory have belonged to this class.

I have the honor to be, Sir.
Your obedient servant.

M. C. ELLIOTT

REPORT OF THE SURGEON.

TORONTO, 1st October, 1897.

James Noxon, Esq., Inspector.

SIR,—I have the honor of herewith submitting to you my Seventeenth Annual Report, as Surgeon of the Andrew Mercer Ontario Reformatory for Females, and Industrial Refuge for Girls, for the year ending 30th September, 1897.

THE REFORMATORY FOR FEMALES.

I am pleased to be able to report that another year has closed without a death, or any very serious illness in any department of the Institution, whether official staff, Reformatory, Refuge, or Nursery inmates.

Among the admissions of new immates the past year, there were seven wholly or partially unfitted for work. Three or four of the number were insane; one was unfitted by the result of an operation; and several by disease or debility for more than very light, or ordinary work. Of the insane cases one M— W in the Reformatory, was certified insane on the 19th May, and on the 21st had to be locked up in a cell and watched on account of the acuteness of her symptoms. On the 2nd of July she was committed to an asylum. Another C— D—, an inmate of the Refuge for Girls, was certified insane, on the 14th July, was promptly committed to an asylum.

The hospital cases were very limited in number the past year. The same may be said of the nursery cases.

There was no epidemic of disease, no serious accident, and fewer complaints than usual by inmates regarding either food, clothing or work.

The assistant engineer was excused from his duties for a time on account of scarlet fever in his family, and with a view of preventing the contagion being brought into the Institution.

What few complaints that were made by inmates as to food or clothing were investigated and found to be frivolous.

In view of the size and construction of the buildings, their isolated situation, and the great danger to life in case of a fire gaining headway therein, I feel constrained to suggest that the chief of the fire brigade, or some person capable of doing so, should be deputed to visit the institution, examine the means of exit, and give instruction to the staff, mostly women as to what disposition to make of the inmates in the emergency of fire in any part of the building.

Herewith will be found the usual tabulated statements.

RECORD OF CASUAL SICK TREATED.

THE REFORMATORY HOSPITAL.

Three inmates occupied the hospital during a portion of the year. One had given birth to twin girls two weeks before the end of the preceding year, and continued in hospital quarters until 29th December of the year just concluded on account first of puerpural fever, and subsequently anæmia, in all 89 days. Another inmate occupied the hospital on account of child-birth (female child), and subsequent weakness, in all 41 days. The third case was one of miscarriage, in all 10 days. For a considerable portion of the year there were no hospital inmates, and there were none in at the end of the year.

THE NURSERY DEPARTMENT.

The number of babes brought into the institution, as well as the number of births, was under the average of former years, and any ailments they had were trivial.

THE REFORMATORY AND REFUGE STAFF.

The health of the Reformatory and Refuge staff the past year has been exceptionally good, there having been no single case of severe or dangerous illness. The number of presentations for treatment was 128.

THE SYPHILITIC WARD CASES.

The number of inmates in this department under treatment the past year, was less than in the preceding year. The year opened with 5 inmates in the isolated ward, who had served varying periods the previous year. Seven were admitted during the year, but as two of the number left by expiry of sentence and were recommitted, the actual number of individuals admitted was 5, making a total of 10 under treatment, which was 7 less than during the preceding year. Of this number three were still serving term of sentence at the close of the year. Those which left the ward did so mostly on account of expiry of sentence. The largest number under treatment at one time the past year was 7. The smallest number was 2. The daily average for the year was 4.74. I give the duration of treatment of the first 5 for the previous year, as well as the term of the treatment of the entire ten during the year just closed.

INDUSTRIAL REFUGE FOR GIRLS.

The past year in the refuge has been no exception to the rule of no deaths, no serious sickness nor accident. One girl was removed to an asylum for the insane, to which reference is made elsewhere. The usual tabulated statement of diseases treated is presented

REFUGE PRESENTATIONS FOR TREATMENT DURING THE YEAR.

HOUSES OF REFUGE.

ORPHANAGES

AND

MAGDALEN ASYLUMS.

Since my last annual report these institutions have been increased by four, viz. :--

Home for the Aged, Lindsay.

Home for the Aged and Infirm, Cobourg.

Home for Incurables, London.

Salvation Army Rescue Home, Hamilton; and application is made by the management of the Berlin Orphanage to have it added to the list.

I have made a thorough inspection of all these institutions during the year and found them as a whole well equipped for caring for their inmates. They are well managed, the majority of them having a board of directors composed of ladies who devote much of their time and means to this work.

I should like very much to see the municipalities contribute more largely towards assisting the Homes that have been provided for the care and comfort of old people who have little or no means of support.

There are now enjoying the advantages of these Homes 4,476, namely, 1,456 males and 3,020 females, being an increase over last year of 121. The number of days' stay during the year was 793,537, as compared with 753,649 last year. The cost of maintenance last year amounted to \$194,470, being \$14,210 more than for the previous year.

There was no addition to the number of Orphanages during the past year but application is now made for placing upon the list a newly established Orphanage at Berlin. Most of these institutions are provided with school-rooms and teachers, so that the children, when old enough, receive regular instruction, and are also trained in housework, sewing, knitting, gardening, etc. When they attain the age of sixteen years suitable homes are found for them in the country, or they are apprenticed to trades in the towns and cities.

Each of these institutions is presided over by a matron who looks after the wants of the inmates and attends to the internal economy of the charity.

The buildings and grounds in connection with the Orphanages have been considerably improved, much being done in the way of refurnishing, heating, lighting and sanitation.

[1]

The number of children in the Orphanages during the past year was 4,222, as compared with 3,995 the year before. They were about equally divided as to sex, namely, 2,082 boys and 2,140 girls. The number of days' stay during the past year was 719.855, as compared with 712,476 in 1896. The total cost of maintenance was \$101,185.78, the average cost per day being 16-300 cents.

In my minutes of inspections will be found details of the work carried on in the different Orphanages of the Province.

There has been no change in the number of Magdalen asylums during the past year, and no applications for adding new ones have been received. There were 201 inmates in these institutions during the year, whose total days' stay was \$40,496, as compared with 40.227 for the previous year. The cost of maintenance was \$809.92, or about \$5.50 more than for the year 1896. The inmates are adult females, who are employed in laundry work, sewing, knitting, etc., and they are provided with lodging, board and clothing while in the institutions. When sufficiently reformed to take situations they generally find suitable places in private homes, or in the various trades where adult females are employed.

The usual information obtained from each Refuge, in respect of sex, religious denominations, nationalities and previous residence of the inmates, has been summarized as under:

Som

Inspections.

I made an inspection of the House of Industry, Toronto, on the 27th April. There were then eighty-eight inmates—sixty-five males and twenty-three females.

The building is 'ecoming old and dilapidated, and too small for the present requirements. More commodious premises convenient to the city, with sufficient land to employ the inmates, will soon be a necessity.

The tramp class cared for in this institution from time to time are strong men and boys who ought to be able to work for a livelihood. As many as 140 tramps have been sheltered at night during the winter.

During the year 42,899 meals have been given to casuals, at a cost of \$1,026.10 or 2 3-5 cents per meal. Nearly 100 toise of stone have been broken during the winter.

I instructed Mr. Nicholson to make an inspection of this Home. A copy of his report is annexed:

I made an inspection of the House of Industry, Toronto, on the 19th December. There were seventy-four males and twenty-three females registered as inmates.

Several of the old people were in bed.

The building was clean throughout, and all the departments were in good order.

The number of casuals sheltered last winter averaged 100 each night. This year the number has been very much smaller, which is probably due to the rigid enforcement of the labor test, namely, breaking stone.

The erection of new wing to the east of the main building has just been commenced. This will increase the accommodation by fifty-beds, and will cost about \$4,500.

HOUSE OF PROVIDENCE, TORONTO.

Inspections.

I inspected this House on the 26th April. In the incurable ward there were 215—94 men and 121 women; and in the other departments there were 253—65 men, 142 women, and 46 children under five years of age. No change in the building or grounds since my last visit.

The dormitories, private rooms, dining-room, chapel, kitchen, laundry, etc., were in good order.

There is good heating, lighting, ventilation and drainage.

The usual spring repairs were going on. The books were properly written up. The old people appeared to be well looked after. There were quite a number of deaths among them during the winter.

I made an inspection of the House of Providence, Toronto, on the 6th December. There were in residence on that day 466 persons—155 men, 267 women, and 45 children.

All the different departments are clean and in good order. The usual improvements have been made during the season. The new wing is a great convenience.

The old people are well cared for. The children when old enough are taken to the Sunnyside Orphanage, where they attend school and are taught housework, gardening, etc.

The Governor-General paid a visit to this institution on the above date and was much pleased with the care given to the inmates by the sisters in charge. The books are well kept

HOME FOR INCURABLES, TORONTO.

Inspections.

I made an inspection of the Home for Incurables, Toronto, on the 28th April. There were registered as inmates on that day 62 males and 56 females—total 118.

I found all the apartments in a good state of cleanliness and order. The building is well ventilated, lighted and heated, and there is good drainage. There is a large medical staff in attendance, as well as a resident medical officer and nurses. The books are well kept.

I instructed Mr. Nicholson to make an inspection of this Home. A copy of his report is annexed:

As instructed by you, I visited the Home for Incurables, Toronto, on the 12th November. The register showed that there were 120 inmates on that day—62 males and 58 females.

The public wards, private rooms, dining rooms, dispensary, laundry, furnace room, kitchen, etc., were inspected and found to be in good order. The records also are properly kept.

AGED WOMEN'S HOME, TORONTO.

Inspections.

I made an inspection of this Home on the 27th April and found it in an excellent state of cleanliness and order.

There were 40 old ladies in residence, the most of whom contribute towards their support.

The building is well lighted, heated, ventilated and drained.

A committee of ladies have charge of the management of the Home. The books were found to be properly entered up.

I visited the Aged Women's Home, Toronto, on the 29th September. There were 47 inmates on that date. All the rooms were clean and in good order.

The building is well heated, lighted and ventilated. A committee of ladies arrange the affairs of the Home.

Inspections.

I made an inspection of this Hospital on the 27th April, and found it in its usual state of good order. There were 26 female patients on this date, and there had been treated since the 1st October 119: the deaths during the same period were 9.

The heating, lighting, ventilation and drainage are satisfactory. There is a good medical staff and efficient nursing. The books are well kept:

I made a second inspection of this Hospital on the 4th December. The patients on that day numbered 21, all females. The admissions since the 1st October were 35; deaths, 2.

I found no change in the premises since my last visit. Everything was in satisfactory order.

Inspections.

I inspected the Convalescent Home, Toronto, on the 27th April. The inmates on that day were three men and six women.

The Home is nicely situated, comfortably furnished and well maintained; but the patients received are too few to enable the managers to pay current expenses. It is managed by a committee of ladies. The books were written up.

I instructed Mr. Nicholson to make a second inspection of this Home. A copy of his report is annexed.

I made an inspection of the Convalescent Home, Toronto, on the 18th December. There were then nine patients—three males and six females. Since the 1st October fifty patients had been received.

Everthing about the Home was in excellent order, and the records were entered up.

Inspections.

I instructed Mr. Nicholson to make an inspection of this Home. A copy of his report is annexed:

I made an inspection of the House of Refuge, Hamilton, on the 17th April. There were on that date 84 inmates (58 males and 25 females) in the main building, and 25 (14 males and 11 females) in the department for incurables, making a total of 109.

The institution was in good order throughout, and everything connected with its management going on satisfactorily. The newly appointed superintendent and matron were in charge.

I inspected this institution on the 18th November. On that occasion there were 101 inmates, namely, sixty-five men and thirty-six women; and of these, twelve men and twelve women were in the incurable department.

The House was in excellent order throughout, and the books properly kept. This is the best Refuge for old people in the Province.

I instructed Mr. Nicholson to make an inspection of this Home. A copy of his report is annexed:

I inspected the St. Peter's Home, Hamilton, on the 17th April. There were seventeen inmates, namely, eight males and nine females.

There have been eight admissions since the 1st October and nine deaths.

This being cleaning day, the rooms were in some confusion, but otherwise the Institution was in its usual condition of good order. The books were entered up. In addition to the Government grant, the Home receives aid from the city of Hamilton and county of Wentworth.

I inspected this Home on the 18th November, when it had fifteen inmates—nine males and six females.

I found all the rooms, beds, bedding, etc., clean and in good order. There was no change in the building or premises, except the ordinary repairs made during the past season. The books were properly kept.

Inspections.

I inspected the House of Industry, Kingston, on the 29th August. All the rooms, beds, bedding, etc., were in good order.

General repairs, painting, etc., have been done during the season. A new frame building has been built for a laundry, convenient to the main building.

A room has also been fitted up in the basement for the use of the female imnates.

There were 42 old people in residence on this date—23 men and 29 women. The books were properly kept.

On the 20th March I made an inspection of the House of Industry, Kingston, and found 50 old people being cared for—30 males and 20 females. Their rooms, beds and bedding were clean and in good order.

The old people were comfortable. One old lady is now over 112 years of age. Books well kept.

Inspections

I made an inspection of the Home for Aged People, London, on the 22nd May. On that day there were fifty-two old people in the institution—thirty men and twenty-two women.

A new furnace has been placed in the building since my last visit. Better ventilation and drainage have also been provided. A small building has been erected at the rear of the main building for laundry purposes.

The sitting rooms, dining rooms, chapel, bath rooms, water closets, etc., were all in good order, and the books properly kept.

I inspected this Home on the 10th September, and found no change in the building or grounds since my last visit.

Everything pertaining thereto was in good order, and the inmates comfortably provided for. The books were properly entered up.

Inspections.

I visited the Convalescent Home, London, on the 22nd May, when there was only one patient in residence. There was no change to note in the building or grounds since my last inspection. All the rooms were clean and in good order.

It is very questionable whether this institution, in view of the very limited number of patients it receives, does sufficient work to pay for its continuance, although the cost of management is not great. There were but thirty-two patients admitted during the past year. Books properly kept.

I inspected this Home on the 10th September. There were three patients in institution on that day—two men and one woman.

The rooms were in their usual state of good order, and the books were properly kept.

ST. PATRICK'S REFUGE, OTTAWA.

Inspections.

. I made an inspection of the St. Charles Hospice, Ottawa, on the 25th January. There were 103 old people in residence on that day, namely, thirty-eight men and sixty-five women.

The dormitories are crowded during the winter months, but old people are made as comfortable as possible. There is one old man 107 years of age, and one old woman 102 years of age. The man is helpless, but the woman is active.

The heating, lighting and drainage are satisfactory. Books properly kept

I inspected this Institution on the 21st September. It is a home for old people of French nationality. There were 101 inmates on this occasion, viz., thirty-five males and sixty-six females.

There was no change to note in the building or grounds since my last inspection. All departments were clean and in good order, and the books properly kept.

HOME FOR THE AGED, OTTAWA.

Full particulars of the operations of this Institution will be found in the annexed summaries:

Inspections.

I made an inspection of this Home on the 30th January. There were forty-two old men in residence on that day, and all appeared to be well and comfortably cared for.

There has been one death since the commencement of the year.

The rooms, beds and bedding were in a neat and clean condition.

The usual house-cleaning and painting has been done since my last visit. The books were found to be properly kept.

The Institution is well managed.

I made an inspection of the Home on the 23rd September.

The inmates on that date numbered thirty-five, all old men. The House was in satisfactory order throughout. Books properly kept.

REFUGE BRANCH, ORPHANS' HOME, OTTAWA.

Inspections.

In this Institution on the day of inspection, 29th January, there were twenty-six adult females and thirteen children in residence; the mothers of the children being with them. The adults are employed in doing laundry work and housework.

The building is not a suitable one for the purposes of a charity of this kind. The beds and bedding were clean. Books well kept. Management good.

A second inspection of this Home was made by me on the 22nd September, when there were thirty-three inmates—twenty-two women and eleven children.

Laundry work, sewing and knitting are carried on. I found the Home in fairly good order.

Inspections.

This Refuge was inspected by me on the 25th January, when there were 191 inmates—138 adult females and fifty-three children under twelve years of age.

The Institution buildings are well heated, lighted and ventilated, and there is good drainage. All departments, working-rooms, dormitories, wash-rooms, bath-rooms and water-closets were clean and in good order.

The work carried on comprises mattress-making, tailoring, bookbinding, laundry work, fancy work and artificial flowers.

The inmates are divided into five classes, three for adults and two for children.

The children attend school on the premises, two rooms being provided for that purpose. The books prescribed for the provincial schools are used, and there are two teachers.

I spent some little time in the chapel on Sunday afternoon while service was being held, and was much pleased with the service and music and the attentiveness of the inmates.

Since the first of the year twenty-six adults and eight children have been admitted, and eighteen adults and three children have gone out. No deaths during that period. Books properly kept. Management good.

I inspected the Refuge again on the 21st September. There were in residence on that day 145 adult females and ninety-three children under twelve years of age.

Industrial work is carried on at this institution, as well as a school for educating the children. The work comprises tailoring, book-binding, sewing and laundry work.

All departments were clean and good order, and the books properly kept.

HOUSE OF PROVIDENCE, GUELPH.

Inspections.

I inspected this House on the 1st March. On that occasion there were fifty-five old people under lodgment—twenty-nine men and twenty-six women.

The ages of two of the women were 96 and 97 years respectively. They were quite active and enjoying good health.

The inmates are comfortably cared for, and their rooms, bedding, etc., clean and orderly.

There is good drainage, heating, lighting and ventilation. Books properly $\mathbf{k}\mathrm{ept.}$

I instructed Mr. Mann to make the second inspection and he reported as follows:

On the 17th Sept., 1897, I visited the House of Providence, Guelph, as instructed by you. On this occasion there were fifty-six inmates in residence, twenty-eight males and twenty-eight females. Nearly all of these were old people.

The state of this House was as usual, and I could not find much to note, any more than what is mentioned above, and that the House is from all appearances very well managed.

The books were entered up and properly kept.

THE THOMAS WILLIAMS' HOME, ST. THOMAS.

Inspection.

I made an inspection of this Home on the 23rd May, and found 15 old people (9 men and 6 women) under charge.

The building and grounds were in well kept order, and beds and bedding clean. The books were properly kept.

The Home is managed by a committee of ladies.

I instructed Mr. Nicholson to make the second inspection and he reported as follows :—

I beg to report that I made an inspection of this home on the 19th August. There were fourteen inmates on that day, namely, five males and nine females.

The wing lately added affords ample accommodation, and all the rooms were clean and neat. There is a large and well cultivated vegetable garden in the rear of the premises.

Two furnaces are used for heating the building, and gas for lighting. The books were entered up.

Inspection.

I instructed Mr. Nicholson to make an inspection of this Home. A copy of his report is annexed:

I inspected the House of Providence, Dundas, on the 17th April. There were on the register on that date the names of 103 old people (55 men and 48 women) and 70 children under 12 years.

The object of this institution is the care of indigent and aged persons of both sexes, and orphan children. Apart from the disorder occcasioned by the usual Saturday cleaning which was in progress, the House was in a well kept condition, and the books were entered up.

Inspections.

I made an inspection of the Protestant Home, Peterborough, on the 8th January. There were in residence on that day twenty old people. The rooms were comfortably heated, clean and well kept. The water supply is from a well and coal oil is used for lighting. Gas or electric light should be substituted for coal oil, and the water supply should be had from the town water works.

I would also recommend that modern water closets be placed inside the buildings, and the outdoor closets be done away with. I found the books well kept.

I instructed Mr. Mann to make the second inspection, and he reported as follows:

I visited the above named Home on August 25th, 1897.

There were 23 inmates, principally old people—13 males and 10 females.

There is not much change to note in this Home, any more than electric lights have been introduced, which work well, and the building has been painted throughout. Books properly kept.

HOUSE OF PROVIDENCE, PETERBOROUGH.

Inspections.

I made an inspection of the House of Providence, Peterborough, on the 8th January. There were on that day 31 inmates, namely: 9 men, 20 women and 2 children. The old men occupy a building convenient to the Hospital; and the women and children are domiciled on the third flat of the Hospital.

The respective quarters were in a clean and orderly condition. There was no change to note since my last inspection. The building is heated by hot water, and it is intended to put in electric light. The water supply is from a tank; town water has not been introduced yet. The records were properly kept.

I instructed Mr. Mann to make the second inspection and he reported as follows:

This Institution was visited by me on the 25th August, 1897. The usual order and quiet prevailed. There were 29 inmates in the House—9 males and 20 female—mostly old people.

Hot water has been introduced into the building.

The building is in good repair and books are properly kept.

Inspections.

I made an inspection of the Home for the Friendless, Windsor, on the 16th April. All the rooms, beds and bedding were clean and in good order; also the bath rooms and water closets.

The building is lighted with coal oil lamps. There were 14 old people registered as inmates, namely: 6 men and 8 women.

The books were properly kept.

I instructed Mr. Nicholson to make the second inspection and he reported as follows:

I beg to report that I visited the Home for the Friendless, Windsor, on the 19th August. There were 14 inmates on that day—7 males and 7 females.

The Home was in a clean and orderly condition. It is heated by hot air furnace, and supplied with city water.

Entries had not been made in the daily record since the 1st August.

THE HAVEN, TORONTO.

Inspections.

I made an inspection of the Haven, Toronto, on the 26th April, and found it in good order throughout. There were in residence on that day 64 women and 15 children.

Laundry work, sewing and knitting are the industries carried on by the inmates, in addition to the general housework. They go out to service when places can be found for them.

The heating, lighting, ventilation and drainage were good:

The grounds were being considerably improved.

I instructed Mr. Nicholson to make the second inspection and he reported as follows:

I made an inspection of the Haven, Toronto, on the 6th December. I found the interior of the building somewhat upset as house cleaning had just been commenced. The attic at the north end of the building has been finished off into two large, airy rooms, with bath room, etc, for the use of the children. The drain from the Institution has also been relaid.

The laundry department is being successfully carried on, yielding a hand-some income. The inmates are also employed in making and mending their garments, and other needle work.

On this date there were registered as inmates 73 women and 9 infants.

THE OLD FOLKS HOME, TORONTO.

Full particulars of the operations of this Institution will be found in the annexed summaries:

Inspections.

I made an inspection of the Old Folks' Home, Toronto, on the 27th April. There were 17 old ladies in residence, and their apartments were all clean and in good order. Each inmate does her own cooking, if able to do so; otherwise it is done in the general kitchen and sent to her room. They all pay something towards their maintenance, or some friend does so for them.

The Home is managed by a committee of ladies. The staff consists of a matron, nurse and servant.

I inspected this Home on the 24th November. There were 18 old ladies in residence on that day. Their rooms were fairly clean and in good order.

I found no change in the premises since my last visit.

Inspections.

TORONTO, 15th December, 1896.

SIR,—At the request of the management of the Home for Incurables, London, I made an inspection of their institution on the 16th September.

The building is on Dundas street, and was formerly occupied by the Salvation Army people. There were no inmates on the day of my visit; twenty-five were admitted during the year. There is accommodation for twenty. All the rooms were clean and in good order.

There are no bath-rooms or water closets in the building, but the management say they will have these conveniences supplied.

A grant of \$100 has been made by the City Council to this Home for the current year.

The institution is managed by a committee of ladies, who petition for Government aid, under the Charity Aid Act, and I beg to recommend that an Order in Council be passed ordering that the Home for Incurables, London, be taken as named in Schedule B of the Charity Aid Act, and that it receive aid in accordance therewith from the 1st July, 1895.

Copy of an Order in Council approved by Colonel Sir Casimir Stanislaus Gzowski, K.C.M.G., Administrator of the Government of the Province of Ontario, the 10th day of February, A.D. 1897.

Upon consideration of the report of Mr. Inspector Chamberlain, dated 15th December, 1896, and upon the recommendation of the Honorable the Provincial Secretary, the Committee of Council advise that, subject to the ratification of this Order by the Legislative Assembly, the Home for Incurables, London, be hereafter taken as named in Schedule "B" of "The Charity Aid Act," and receive aid in accordance therewith from the 1st day of July, 1895.

Certified,

J. LONSDALE CAPREOL,
Assistant Clerk, Executive Council.
74

I made an inspection of this Home on the 22nd May. There were 14 inmates on that day; there is accommodation for 18. I found the rooms clean and in good order.

I noticed that some improvements had been made in the building and grounds since my last visit. The building is not well adapted for its present purpose. It has no bath rooms or water closets and no hot water. Coal oil is used for lighting.

Dr. Gardener is the attending surgeon, and there is a matron in charge who has the assistance of one nurse, and one man servant and one maid.

The books were properly entered up.

I inspected the Home for Incurables, London, on the 10th September. On that day there were 14 inmates—7 men and 7 women.

Considerable improvement has been made to the building and grounds; but the accommodation is not as great as it should be. The Home is managed by ladies, and they have a trained nurse as superintendent. The books were properly kept.

HOME FOR THE AGED AND INFIRM COBOURG.

Inspections.

TORONTO, 15th December, 1896.

SIR—A Home for the Aged and Infirm was lately established by the ladies of the town of Cobourg, and at the request of the management I made an inspection of the institution on the 19th September.

The building has a good location, is built of brick, two storeys high, and has a basement. It will accommodate from twelve to fifteen persons. The rooms were clean and in good order.

The building is heated by stoves, lighted with coal oil and supplied with water from the town water-works.

There is a matron in charge and an assistant. A physician attends when required.

The Home was opened on the 17th November, 1895. It is owned by the board of management. The board is composed of a lady president, two vice-presidents, treasurer and twelve members (male and female).

I have the honor to recommend that an Order in Council be passed ordering that the Home for the Aged and Infirm, Cobourg, be taken as named in Schedule B of the Charity Aid Act, to receive aid in accordance therewith from the 1st of January, 1896.

I have the honor to be, Sir, Your obedient servant,

> T. F. CHAMBERLAIN, Inspector.

The Honorable

THE PROVINCIAL SECRETARY.

Copy of an Order in Council approved by Colonel Sir Casimir Stanislaus Gzowski, K.C.M.G., Administrator of the Government of the Province of Ontario, the 10th day of February, A.D. 1897.

Upon consideration of the report of Mr. Inspector Chamberlain, dated 15th December, 1896, and upon the recommendation of the Honorable the Provincial Secretary, the Committee of Council advise that, subject to the ratification of this Order by the Legislative Assembly, the Home for the Aged and Infirm, Cobourg be hereafter taken as named in Schedule "B" of "The Charity Aid Act," and receive aid in accordance therewith from the 1st day of January, 1896.

Certified,

J. Lonsdale Capreol, Assistant Clerk, Executive Council.

I made an inspection of this Home on the 18th January.

Since my last visit a bath-room and water closet have been placed inside the building, and all the windows have been covered with storm sashes.

Coal stoves are used for heating, and there is a hot water heater for the bath-room.

There were 8 old people in residence—2 men and 6 women. There is accommodation for twelve. The beds and bedding were clean and in good order, and the books well kept.

I inspected this Home on the 24th August, and found that it had been thoroughly cleaned and papered during the summer. The rooms, beds, bedding, etc., were in neat order. There were five old people in residence at the time of my visit.

HOME FOR THE AGED, LINDSAY.

Inspections

Application having been made on behalf of the Council of the Town of Lindsay for Government aid for a Home for the Aged maintained by them in the said town, I beg to report that I made an inspection of the Institution on the 19th May, 1896.

A large brick building two and a half storeys high has been rented for the purpose. It is well located and has good rooms, but it requires to be supplied with water from the town service, water closets and bath rooms, gas or electric light and painting. The building is heated by a hot-air furnace.

Twelve old people—four men and eight women—were being cared for on the day of my visit. From twenty-five to thirty persons can be accommodated. Some of the immates pay for their maintenance.

The Home is managed by a trust board composed of ladies and gentlemen. There is a matron in charge and her daughter acts as assistant.

The inmates who are able, take part in the housework.

A book of record is kept of each case. The Home was opened for the reception of inmates last November.

All denominations, both Protestant and Catholic, are represented on the board. All clergymen visit the Institution. Grants are made to it by the Town and County Councils.

I have the honor to recommend that an Order in Council be passed ordering that the Home for the Aged, Lindsay, be taken as named in Schedule B of The Charity Aid Act, and that it receive aid accordingly from the 1st day of January, 1896.

I instructed Mr. Mann to make an inspection of this Home. A copy of his report is annexed:

I beg to report that at your request I made a visit to the Institution known as the Home, Lindsay, on the 18th September, 1896. The building is a good, substantial one and well situated, and although intended for a hotel (and as such was for some time used), with some little alteration could be made a satisfactory

place for the use to which it is now being put to. Although this Home is not yet placed upon the list of institutions securing Government aid it would appear to me that the application of the management is worthy of consideration.

There are two good hard water wells and one cistern upon the property which I was informed afforded sufficient supply for the capacity of the Home.

The building is heated by furnace, for wood. One objection can be found in the sidewalk approaches, which are simply disgraceful for a town of the importance of Lindsay.

This Home was inspected by me on the 8th January, when there were thirteen old people in residence, namely, three men and ten women. There is accommodation for twenty-six inmates.

The building is heated by a hot-air furnace and coal stoves. The water supply is from a well.

All the apartments were in good order. The books were properly kept.

I instructed Mr. Mann to make an inspection of this Home. A copy of his report is annexed:

When in Lindsay I visited the Home for the purpose of inspecting it There were seventeen old people in residence, viz.: five males and twelve females. This was on July 12th, 1897. These old folks were all in as good state of health as could be expected. The building was in good state of repair. Ventilation good. Drainage good, Water supply from two wells good. The same cannot be said of the approaches to the building as they are in a very dilapidated state, being actually dangerous to walk upon.

ORPHAN ASYLUMS.

The following institution has been added to the list receiving Government aid during the past year:

The Salvation Army Refuge Home, Hamilton.

The statistical tables on the following pages of this report show a considerable increase in the contributions to several of the institutions, while in some cases there is a slight falling off as compared with the past year.

The total number of children cared for in the Orphanages during the year was 4,222, as compared with 3,995 in 1896.

In the tables and my minutes of inspection will be found full details of the method of receiving and discharging children, the course of training they receive, their nationality, religion, etc., also the condition of the buildings and grounds.

The statistics relating to the sex, religious denominations and nationalities of the inmates are given in the following summary:

Sex.		
Male Female	2,082 2,140	4,222
$Religious\ Denominations.$		-,
Protestant Roman Catholic Other religions not give	2,242 1,969 11	4.222

The receipts of the Institution during the year, including the Government grant of \$2,132.24, were \$11,714.47, and the expenditures were \$11,724.10.

The collective stay of the inmates was 105,665 days, entitling the institution to receive the sum of \$2,113.30 as Government aid for the year 1897.

Inspections.

I visited the Roman Catholic Orphan Asylum, Toronto, on 28th April. There were 130 girls and 137 boys in residence, making a total of 267, ranging from three to 15 years of age.

There were also 14 children domiciled here who had been committed by magistrates on behalf of the St. Vincent de Paul Society They were from five to seven years of age.

The immates were all well at the time of my visit, though there had been a good deal of sickness among them during the year, namely, scarlet fever, diphtheria, chicken pox and mumps.

The building has since been disinfected and thoroughly renovated, and the drainage improved.

The playrooms, schoolrooms, dining rooms, bathrooms, kitchen, laundry, dormitories, etc., were all in good order.

The children do gardening, house work, sewing, etc., beside attending school-Homes are found for them, especially in the country, from time to time.

I instructed Mr. Nicholson to make a second inspection of this Institution. A copy of his report is annexed:—

I inspected this Orphanage on the 20th November. There were then in residence 277 children (146 boys and 131 girls), the majority of whom were enjoying themselves in the recreation yard. They appeared to be well cared for and in good health.

The dormitories, schoolrooms, dining rooms, etc., were in neat order, and the records were found to be correctly kept.

PROTESTANT ORPHANS' HOME, TORONTO.

The following summaries show the operations of this Institution during the past year:

Movements of Inmates.

The receipts of this Institution during the year, including the Government grant of \$1,376.70, were \$9,834.60, and the expenditures were \$9,680.69.

The collective stay of the inmates was 70,784 days, entitling the Institution to receive the sum of \$1,415.68 as Government aid for the year 1897.

I inspected the Orphans' Home, Toronto, on the 27th April. The names of 191 children were on the Register, 113 boys and 78 girls, ranging from three to fifteen years.

The building is well heated and lighted, and has good drainage and ventilation. City water is supplied. The children attend school in a separate building, containing four rooms. Teachers are supplied by the Public School Board. Homes are found for the children from time to time, and in some cases they are taken by their parents or relatives. Beside attending school they do housework, sewing and knitting. The books are well kept.

mstructed Mr. Nicholson to make a second inspection of this Orphans' Home. A copy of his report is annexed:

I visited the Protestant Orphans' Home, Toronto, on the 12th November There were 201 children in residence, viz., 121 boys and 80 girls, from three to twelve years of age.

I saw the majority of the children in their class-rooms, in the adjoining building, and they were looking healthy and happy.

House-cleaning, calsomining, etc., were being done in the Home.

The dormitories, play-rooms, bath-rooms, etc., were all in satisfactory order.

GIRLS' HOME, TORONTO.

The following summaries show the operations of this Home during the year.

Movements of Innates.

Including the Government grant of \$772.76, the revenue of the Asylum during the year amounted to \$19,839.83, and the expenditure to \$3,576.73.

The collective stay of the immates was 34,333 days, entitling the Asylum to receive a sum of \$686.66, as Government aid for 1897.

I inspected the Girl's Home, Toronto, on the 26th April. There were 99 girls in residence on that day, from three to twelve years of age. They attend school in the building, two teachers being employed. Homes are found for the children from time to time.

The buildings and grounds were in good order. The lighting, heating, ventilation, and drainage very good. The Home is managed by a committee of ladies. Books well kept.

I instructed Mr. Nicholson to make a second inspection of this Institution; A copy of his report is annexed.

As instructed by you I inspected the Girls' Home, Toronto, on the 6th December. There were 86 girls being cared for, ranging from two to thirteen years of age. They were all seen in the school rooms and nursery, and presented a clean and healthy appearance.

The Home was found to be in its usual well kept state throughout.

BOYS' HOME, TORONTO.

The following summaries show the operations of the Home during the year:

Movement of Inmates.

, and the second		
In residence, 1st October, 1896 Admitted Total number of immates Discharged	109 65 — 80	174

The receipts of the Home during the year, including the Government grant of \$813.56, amounted to \$6,250.32, and the expenditures were \$6,265.47.

The collective stay of the Institution was equal to 35,611 days, entitling the Institution to receive the sum of \$712,22 as Government aid for the year 1897,

I made an inspection of the Boys' Home, Toronto, on the 26th April, and found it in its usual condition of good order.

There were the names of 95 boys on the register, whose names ranged from $3\frac{1}{2}$ to 15 years. All were reported to be in good health. No deaths occurred during the year.

A separate building, originally intended for an infirmary, is used for school purposes, and two teachers are employed.

The Home is managed by a committee of ladies.

I instructed Mr. Nicholson to make a second inspection of this Home. A copy of his report is annexed:

I made an inspection of the Boys' Home, on the 6th December.

House cleaning was in progress and the building was necessarily in some disorder. Apart from this, however, the work of the Institution was going on in its usual satisfactory manner.

Some improvements have been made since the last inspection, among which are the extension of the laundry building to make room for a new steam dryer, and the placing of a metal ceiling in the boiler room.

There were 95 boys registered as inmates on this date, all of whom were reported to be in good health.

THE WORKING BOYS' HOME, TORONTO.

The following summaries show the operations of the Home during the year:

Movement of Inmates.

The receipts of the Home during the year, including the Government grant of \$222.98, amounted to \$3,776.36, and the expenditures were \$3,618.63.

The collective stay of the boys was equal to 12,256 days, entitling the institution to receive the sum of \$24512 as Government aid for the year 1897.

I inspected the Working Boys' Home, Toronto, on the 26th April, when there were 39 boys registered as inmates. They work about the city and board in the Home, paying from 75c. to \$2 per week, according to their earnings. When out of employment they are cared for and boarded without charge if they have no money.

The Institution was undergoing house-cleaning and repairs at the time of my visit. The beds and bedding were clean and in good order. Night school is carried on during the winter. • The boys have a band, and other amusements in connection with the Home. The books are well kept.

I instructed Mr. Nicholson to make a second inspection of the Home. A copy of his report is annexed:—

I made an inspection of this Home on the 6th December, when 34 boys were registered as inmates. Of this number, 27 are filling situations in different lines of business, learning trades, etc.

From letters shown me by the superintendent, received from some of the boys who have gone out into the world, the kindness and benefits they received while in the Home are held in grateful remembrance, and they are able to give a good account of themselves.

The Institution was found to be in well kept order, and the records written up.

THE INFANTS' HOME AND INFIRMARY, TORONTO.

The following summaries show the operations of this Home during the past year:

Movements of Inmates.

In residence, 1st October, 1896	130	Mothers. 21 64	Totals. 75 194

The receipts of the Home during the year were \$17,059.39, and the expenditures were \$6,371.04.

The collective stay of the children equalled 23.846 days. The Home will be entitled in respect of them to \$476.92.

The collective stay of the mother nurses, for whom ten cents a day is allowed, was 10,623 days. The Home will therefore be entitled to \$1,062.30.

The collective days' stay of the other women, for whom seven cents per day is allowed, was 1,140 days, for which the sum of \$79.80 will be allowed.

The total grant, therefore, to the Home for 1897, including the grant of \$200 for the Infirmary work, will amount to \$1,819.02.

Inspections.

I made an inspection of this Home on the 27th April, when there were in residence eighty-five infants and thirty-eight women who were mothers.

No woman is admitted to this Home without her child. The children are cared for until they are three years of age, when they are transferred to other Homes, or are taken by their parents, or are adopted. Sometimes the parents pay a small amount for their care while in the Home.

All departments were clean and in good order. The Home is managed by a committee of ladies. The staff consists of a matron, nurses, medical attendant, etc. The books were written up.

I visited this Home on the 20th December, when the inmates numbered sixty-two infants and thirty mother nurses.

The intants remain in the Home until they are three years of age, when they go to the Girls' Home or Boys' Home, and are taken from there for adoption by private families, or are taken charge of by their parents or friends.

The interior of the building has been much improved during the year. The ceilings and woodwork have been repainted, varnished, etc., a new cooking range has been placed in the kitchen, and improvements added to the laundry.

All the rooms, dormitories, water closets, etc., were in well kept order.

The debt which was on this property has been paid off during the year, a bequest from the late Mr. Tucker's estate having provided the necessary means.

ST. NICHOLAS' HOME, TORONTO.

The following summaries show the operations of the Home during the official year:

Movements of Inmates.

In residence, 1st October, 1896 Admitted Total number	60 50	110

The revenue of the Home during the year, including the Government grant of \$391.86, was \$4,422.79, and the expenditure was \$4,431.79.

The collective stay of the boys was 20,933 days, entitling the Institution to receive the sum of \$418.66 as Government aid for 1897.

I made an inspection of the St. Nicholas Home, Toronto, on the 26th April. There was no change in building or grounds since my last visit. House cleaning and repairs were being done.

There were 46 boys registered as immates of the Home, from five to nineteen years of age. Most of them are employed about the city, in different vocations. Many of them come from the Sunnyside Orphanage, and remain in this Institution until permanent employment is found for them. Those in situations pay a small amount weekly for their board. The Home is managed by the Sisters of St. Joseph.

I instructed Mr. Nicholson to make a second inspection of this Institution. A copy of his report is annexed.

I made an inspection of the St. Nicholas Home, Toronto, on the 18th December. There were registered as inmates on that day 54 youths, 8 of whom were under twelve years of age. The younger boys attend school daily, and for those who are working during the day a night school is carried on in the Home.

The premises were in their usual condition of good order, and the books were entered up.

ST. MARY'S ORPHAN ASYLUM, HAMILTON.

The following summaries show the operations of this asylum during the year:

Movements of Inmates.

Including the government grant of \$931.30 the revenue of the Asylum during the year amounted to \$7,666.59, and the expenditure to \$7,666.59.

The collective stay of the inmates was 48,203 days, entitling the Asylum to receive a sum of \$964.06 as Government aid for 1897.

I instructed Mr. Nicholson to make an inspection of this Institution. He reports as follows:

I made an inspection of the St. Mary's Orphan Asylum, Hamilton, on the 17th April. There were then sixty-eight children in residence, all of whom were in good health.

The dormitories have been partially supplied with iron bedsteads, and more are to be added shortly. The premises were in good order, and the books were entered up.

I visited this Orphanage again on the 8th December. There were then fifty-five children in residence, viz.: fifty-three girls and two boys, ranging in age from two to twelve years.

When old enough they are transferred to the House of Providence, Dundas. The older children go out to the city schools; the younger ones are taught in the Orphanage.

The dormitories, play-rooms, schoolroom wash and bath-rooms, kitchen laundry, water-closets, etc., were all clean and in good order.

The children are taught house-work, sewing, knitting, and fancy work. The books are well kept, and the management commendable.

PROTESTANT ORPHAN ASYLUM, HAMILTON.

The following summaries show the operations of this Asylum during the year:

Movements of Innutes.

The receipts of the Asylum during the year were \$4,609.97, and the expenditures were \$4,813.82. The receipts and expenditures of the Aged Women's Refuge are included in these amounts.

The collective stay of the children was 3,177 days, entitling the Institution to receive the sum of \$63.54 as Government aid for 1897.

I instructed Mr. Nicholson to make an inspection of this Institution. He reported as follows:—

I inspected this Orphanage on the 17th April, and saw the nine children (six boys and three girls), then in residence.

This is a very small number, considering that there is accommodation for about fifty children.

The Institution is well supplied with iron bedsteads, all of which were neat and clean. School is held in a separate building on the premises.

I inspected this Orphanage on the 18th November, and found it in excellent order. There were then eight inmates, six boys and two girls. They attend school daily, and when they attain fourteen years of age homes are found for them.

The Institution is provided with electric light and steam-heating The school-rooms are in a separate building, adjoining the home.

BOYS' HOME, HAMILTON.

The following summaries show the operations of this Home during the year

The receipts of the Home during the year were \$3,230.93, and the expenditures were \$3,322.71.

The collective stay of the inmates was 26,328 days, entitling the Home to receive the sum of \$526.56 as Government aid for 1897.

I instructed Mr. Nicholson to make an inspection of this Institution. He reported as follows:—

The Boys' Home, Hamilton, was inspected by me on the 17th April. There were the names of 74 boys on the register, 64 of whom are under twelve years of age. Eleven have been admitted since the 1st October, and seven have been discharged.

The boys keep the beds and dormitories in order, and assist in doing the general work of the house. Apart from the weekly cleaning, which was in progress, I found the Home in its usual state of good order, and the books entered up.

I inspected the Boys' Home, Hamilton, on the 18th November.

There were 65 inmates on that day, ranging in age from five to fourteen years.

I found no special change in the building or grounds since my last visit The building is well lighted, heated and ventilated.

The boys are generally placed with farmers at thirteen years of age. They look after their own rooms and dormitories, and are taught knitting and sewing. They also attend school in the building, two teachers being employed.

GIRLS' HOME, HAMILTON.

The following summaries show the operations of this Home during the \mathbf{y} ear.

Movements of Inmates.

The revenue of the Home during the year was \$2,080.22, and the expenditure was \$2,041.32.

The collective stay of the children was 13,928 days, entitling the Home to receive a sum of \$278.56 as Government aid for 1897.

I instructed Mr. Nicholson to make an inspection of this Home. He reports as follows:

I made an inspection of the Girls' Home, Hamilton, on the 17th April. There were thirty-five girls in residence at the time of my visit, all of whom appeared to be well cared for and enjoying good health. Since the 1st of October fourteen have been admitted and twenty-two have gone out, ten of the latter number having been placed in homes by the Children's Aid Society.

The building was undergoing the usual spring cleaning: the ceilings were being calsomined and the walls and floors painted.

New fittings have been placed in the bath rooms, and concrete floors have been laid in the cellars. The books were entered up.

This Home was inspected by me on the 19th November. There were thirty-six girls in residence, from four to thirteen years of age.

They attend school in a separate building on the grounds, and are also

instructed in house-keeping, sewing, knitting, etc.

The Home was in good order, the usual repairs having been made during the season.

HOME FOR THE FRIENDLESS AND INFANTS' HOME, HAMILTON.

The following summaries show the operations of this Home during the year:

Movements of Inmates.

In residence 1st October, 1896 Admitted Total number of inmates	35 77 ——————————————————————————————————	112
Discharged Died In residence, 30th September, 1897	79 10 23	I12

The revenue of the Home, including the Government grant of \$385.23 was \$2,667.26, and the expenditure \$2,734.51.

The collective stay of the children equalled 9,613 days. The Home, therefore, will be entitled in respect of them to \$192.26.

The collective stay of mother nurses for whom ten cents a day is allowed, was 659 days. The Home in respect of these will be entitled to \$65.90.

The collective days' stay to those mothers for whom seven cents per day is allowed was 1,840 days, for which they are entitled to receive \$128.80.

The total grant to the Home, therefore, for 1897, will amount to \$386.96.

Inspection.

I instructed Mr. Nicholson, to make an inspection of this Home. He reported as follows:

I made an inspection of this Home on the 17th April, when there were eight mother nurses and twenty-four infants in residence. With the exception of a few cases of chicken-pox among the children, the immates were all well.

The Home was found to be in an excellent condition of cleanliness and order; and the books were entered up.

I inspected this Home on the 19th November, and found that considerable improvement had been made since my last visit, such as new floors, verandahs, water closets, etc.

There were seven adult females and twenty-five children, under five years of age, in residence. At five years of age the children are placed in other Homes in the city.

The revenue of the Home during the year was \$3,662.02, including the Government grant of \$392.82, and the expenditure was \$3,688.95.

The collective stay of the children was 17,577 days, entitling the Institution to receive a sum of \$351.54 as Government aid for 1897.

I made an inspection of the Orphan's Home, Kingston, on the 29th March. There were fifty children being cared for, namely, twenty-two boys and twenty-eight girls. They attend school daily in the building and are also taught housework, sewing and knitting. Homes are found for them from time to time.

The books were entered up to date.

I inspected this Home again on the 28th August. There were forty-five children being cared for, viz.: seventeen boys and twenty-eight girls, all under twelve years of age.

They attend school, do housework, sewing, knitting, etc.

Homes are found for them from time to time.

There was no change in the building or grounds since my last visit. The building is well lighted, heated and ventilated, and all in good order.

ORPHANAGE OF THE HOUSE OF PROVIDENCE, KINGSTON.

The following summaries show the operations of this Orphanage during the year:

Movements of Patients.

The receipts and expenditures of the Orphanage are included with those of the House of Providence, and cannot be shown separately.

The collective stay of the children was 30,583 days, entitling the Orphanage to receive the sum of \$611.66 as Government aid for 1897.

Inspections.

I made an inspection of this Orphanage at the 30th March. The inmates on that day numbered sixty-two, viz., thirty-eight boys and twenty-four girls.

The larger children attend the city schools, one teacher is employed to instruct the smaller children in the building.

The dormitories, dining-room. school-rooms, play-rooms, etc., were all in good condition. The building is well lighted and heated, and has good ventilation and drainage.

The children are taught to do the usual work about the House, and are placed in private homes from time to time as opportunities offer.

The books were properly entered up.

There were sixty-one children in the Orphanage when I visited it on the 28th August, thirty-seven of whom were boys and twenty-four were girls, ranging in age from three to twelve years.

Their dormitories, dining-room, play-rooms, etc., were clean and in good condition.

The children are taught house-work, sewing, knitting, etc., and homes are found for them from time to time. Books properly kept.

The income of the Asylum during the year amounted to \$1,205.88, and the expenditure to \$1,190.00.

The collective stay of the inmates was equal to 13,366 days, thus entitling the Institution to receive the sum of \$267.32, as Government aid for 1897.

I inspected this Orphanage on the 29th March and found it in good condition. The dormitories, day-rooms, etc., were in satisfactory order. There were in residence thirty-two children under twelve years of age—four boys and twenty-eight girls.

I inspected this Orphanage on the 22nd August. There were twenty-two inmates, all girls, from two to twelve years of age.

The dormitories, dining-room, school-room, bath-room, water-closets, etc. were clean and in good order.

The children are taught knitting, sewing and housework.

They are placed out in homes in some cases, and in others, the relatives take them from the Institution after a time

ORPHANS' HOME, OTTAWA.

The following summaries show the operations of this House during the year:

The revenue of the Home was \$4,907.52, and the expenditures were \$5,667.63.

The collective stay of the children was equal to 21,043 days, thus entitling the Institution to receive the sum of \$420.86 as Government aid for 1897.

I visited the Orphans' Home, Ottawa, on the 27th January, and found all departments clean and in good order. The building is well heated, lighted and ventilated.

There were fifty-three children in residence--twenty-six girls and twenty-seven boys.

They have school rooms in the Home where they are taught daily. They also assist in the housework, sewing, knitting, etc.

Homes are found for them occasionally among the farmers of the surrounding country, or they are apprenticed to trades in the city.

I made an inspection of the Orphans' Home, Ottawa, on the 22nd September. There were fifty children in residence from three to fitteen years of age—twenty-four boys and twesty-six girls. They attend school, do housework, etc. and are placed in homes from time to time. The Home was in good order throughout.

ST. PATRICK'S ORPHAN ASYLUM, OTTAWA.

The receipts and expenditures of this Institution are included in the financial statements of the Refuge Department vide Schedule B. Refuge Report.

The collective stay of the children was equal to 23,389 days, entitling the Institution to receive the sum of \$467.78 as Government aid for 1897.

This Orphanage was inspected by me on the 27th January, when I found everything in good condition. There were tifty nine children in residence, namely, thirty-four boys and twenty-five girls. They attend school and are also taught housework, sewing, knitting, etc. They were all in good health on this occasion.

There was no change to note in the building or grounds since my last visit. The books were properly kept.

I made an inspection of the orphanage on the 23rd September.

There were sixty-six children being cared for, namely, thirty-one boys and and thirty-five girls, ranging from two to twelve years of age. They are taught sewing, knitting and general house work, besides attending school.

The school rooms and all other parts of the building were clean and in good condition, and the books were properly kept.

ST. JOSEPH'S ORPHAN ASYLUM, OTTAWA.

The following summaries show the operations of this Charity during the year:

Movements of Patients.

Movements of 1 actents.

The receipts of the Institution were \$6,858.35, and the expenditures \$6,847.94.

The collective stay of children was 54,332 days, entitling the Asylum to receive the sum of \$1,086.64 as the Government aid for 1897.

I made an inspection of this Orphanage on the 29th January. There were 150 children in residence on that day, namely 66 boys and 84 girls. They attend school, and are taught housework, sewing, knitting, etc. Homes are found for them from time to time.

All departments were clean and in good condition. The books were well kept.

This Orphanage was inspected by me on the 20th September. On that day there were 136 children in residence—61 boys and 75 girls, from three to twelve years of age. They were all apparently healthy, and their apartments were clean and in good order.

This Institution is about to be removed to the site occupied by the Infants Home, in the vicinity of Government House.

A. 1898

ROMAN CATHOLIC ORPHAN'S HOME, LONDON.

The following summaries show the operations of this Orphanage during the year:

Movements of Innutes.

The receipts and expenditures of this Home during the year amounted to \$11,939.11 and 12,682.93, and are included with those of the House of Refuge.

The collective stay of these children was 34,131 days, entitling the Asylum to receive the sum of \$682.62 as Government aid for 1897.

I made an inspection of the Roman Catholic Orphan's Home, London, on the 21st May. On that day there were ninety-five children in residence—sixty-five boys and thirty girls, ranging from two to twelve years of age. Those of school age attend classes in the building. Homes are found for them in private families from time to time.

The school rooms dining rooms, dormitories, bath rooms, water closets, etc were clean and in good order. The building is well heated and lighted; the ventilation and drainage are good.

I visited the Orphanage on the 11th September. There were ninety-nine inmates on that day, viz., sixty-two boys and thirty-seven girls.

They are instructed in housework, knitting and sewing. They also attend school daily.

Their dormitories, school rooms, play rooms, etc., were in good order.

A. 1898

PROTESTANT ORPHANS' HOME, LONDON.

The following summaries show the operations of this Orphanage during the year:

The revenue of the Home was \$3,102.36 and the expenditures were \$3,114.12. The collective stay of the children was equal to 12,185 days entitling the Institution to receive the sum of \$243.70 as Government Aid for 1897.

I made an inspection of this Orphanage on the 22nd May. There were thirty-seven inmates on that day, 25 boys and 12 girls, from two to twelve years of age. Those of school age attend school in a building which is on the premises. They are also taught house work, sewing, knitting, etc.

Eleven children have been placed in homes in the country during the present

month.

The dormitories, play rooms, dining room, kitchen, cellar wash room, bath rooms, water-closets, etc., were all clean and in good order. The building is well heated, lighted and ventilated. The drainage is also satisfactory. Books well kept.

I visited the Protestant Orphans' Home on the 10th September. The register showed that there were twenty-six children in residence, from two to twelve years of age, viz., twenty-two boys and six girls. They attend school, do house work, knitting, sewing, etc.

There are good school-rooms in an adjoining building.

The Institution was in good order throughout. It is managed by a board of trustees.

WOMEN'S REFUGE AND INFANTS HOME, LONDON.

The following summaries show the operations of this Charity during the year:

Movements	of	Inmates.

The receipts during the year, including the Government grant of \$277.05, were \$920.97, and the expenditure \$1,375.89.

The collective stay of the children equalled 4,576 days. The Home will, therefore, be entitled in respect of them to \$91.52.

The collective stay of mother nurses, for whom ten cents a day is allowed, was 1,016 days. The Home, in respect of these, will be entitled to \$101.60.

The collective days' stay of those mothers for whom seven cents per day is allowed, was 1,046 days, for which they are entitled to receive \$73.22.

The total grant to the Home, therefore, for 1897, will amount to \$26634.

Inspections.

I made an inspection of this Home on the 22nd May when its inmates were four women and thirteen infants. Three of the women were mothers of the children. When the children are three years of age they are taken to the Childrens' Homes.

There was no change in this building or grounds since my last inspection. The rooms, bed and bedding, bath-rooms, water-closets, etc., were clean and in good order. The books were properly kept.

I inspected this Home on the 9th September, and found no change in the building or grounds since my last visit. The rooms, beds, bedding, etc., were clean and in good order. There were four women and eleven children in residence. The books were properly kept.

PROTESTANT HOME (ORPHANAGE BRANCH), ST. CATHARINES.

The following summaries show the operations of this Charity during the year:

Movements of Inmates.

The revenue and expenditure of the Home during the year amounted to \$2,377.17 and \$2,258.06 respectively.

The collective stay of infants to 7,298 days at two cents entitle the Home to \$145.96 for 1897.

On February 20th I inspected this Home and found nineteen children in residence—eight boys and eleven girls.

Those who are old enough go to the ward schools. They also do a little, house-work, sewing and knitting. They are very comfortable, their rooms being clean and well kept.

The management intend putting in a furnace, and making general repairs when spring opens. Books well kept.

I instructed Mr. Nicholson to make a second inspection of this Orphanage A copy of his report is annexed:

According to instructions I made an inspection of this Orphanage on the 7th September. There were twenty-one inmates on that day—ten boys and eleven girls.

I found the building in a state of disorder consequent upon the extensive improvements that are being made, viz., a new furnace for heating by hot water, new plumbing, papering, calsomining, etc. This work, when completed, will place the institution in a very satisfactory condition.

The revenue of the Asylum was \$1,815.54, including the Government grant of \$361.20, and the expenditure to \$1,815.54.

The collective stay of the children was 18,758 days, entitling the Asylum to receive the sum of \$375.16 as Government aid for 1897.

I requested Mr. Aikens to inspect this Institution. A copy of his report is annexed:

I inspected this orphanage on June 30th. The names of forty-eight children were on the daily record on that day, eleven having been discharged and one died during the year. The children were well physically, and most of them receive instruction in the school attached, where they get a training in English and German.

I had an extended conversation with the sisters in regard to their work and how far their expectations have been realized in the subsequent careers of the children. They informed me that some of them have entered professional life, others mercantile, etc., etc., and that with scarce an exception, all are respectable and responsible citizens and more than self sustaining. Much of this success is no doubt due to their mastery of two languages and to their being reared in an atmosphere "far from the madding crowd's ignoble strife." I inspected the dormitories, beds, schoolrooms, etc., as well as the grounds. The latter give promise of an abundant return in fruits and vegetables for the labor expended on them, and the building throughout was clean and tasty.

ORPHANS' HOME, FORT WILLIAM.

The revenue of the Home was \$1,857.32, and the expenditure \$1,895.32.

The collective stay of the children was 8,040 days, entitling the Home to receive the sum of \$160.80 as Government aid for 1897.

Inspections.

I visited the Orphans' Home, Fort William on the Ist July, and found no change in the building or grounds since my last inspection. Everything pertaining to it was in satisfactory order.

There were twenty children in residence, from six to sixteen years of age. They attend school in an adjoining building and also are taught gardening, sewing and housework. They are placed in the homes of private families as opportunity occurs. The children belonging to families living in the neighborhood also attend the school.

The revenue of the Home during the year amounted to \$1,515.17, and the expenditure to £1,317.23.

The collective stay of the inmates was equal to 6,990 days, thus entitling the Institution to receive the sum of \$139.80 as Government aid for 1897.

I made an inspection of this Home on the 28th April and found ten women and three infants in residence. The inmates do laundry work, sewing, knitting, etc. Homes or situations are found for the mothers from time to time, while their children are kept until old enough to go to some one of the Orphan Homes or are taken by the mothers.

The building has undergone some repairs, but it is not in very good condition yet. There are no water-closets in the building.

Coal oil is used for lighting and stoves for heating. City water is supplied Books well kept.

The revenue of the Shelter during the year amounted to \$664.52, and the expenditure to \$662.27.

The collective stay of the inmates was 6,931 days, entitling the Shelter to receive a sum of \$138.62 as Government aid for 1897.

This charity was inspected by me on the 26th April. The rooms were all clean and in good order, The building is heated by hot air, and lighted by coal oil

There were eighteen children being cared for on this date, from two and a half to ten years of age. They are placed with private families when suitable homes can be found for them; some of them go back to their parents. Books were properly kept.

I requested Mr. Nicholson to make a second inspection of this institution A copy of his report is annexed:

I made an inspection of the Salvation Army Children's Shelter, Toronto, on the 6th December. There were then nineteen children under charge, from one year up to eleven years of age. The room used as a dormitory appeared to be somewhat crowded with cots. The building was in fairly good order. It is in charge of a matron who has three assistants.

THE RESCUE HOME FOR WOMEN, LONDON.

I made an inspection of this Home on the 22nd May. There were then 21 inmates—8 women and 13 infants.

I found no change in the premises since my last visit, with the exception of a new bath-tub and water closet lately put in the building; but these conveniences are not in general use yet on account of the drainage.

Stoves are used for heating, and coal oil for lighting. The books well kept

I inspected this Home on the 10th September. The inmates on that date were ten adults and nine infants.

The rooms, beds and bedding, bath-rooms and water-closets were all in good condition.

A new drain has been laid and connected with the city sewerage.

The interior of the Home showed considerable improvement since my last visit.

THE RESCUE HOME AND CHILDREN'S SHELTER, OTTAWA.

INSPECTION.

I made an inspection of this Home on the 29th January. The inmates were twelve adult females and eighteen children. The children were from two weeks to six months of age. The women remain in the Home as long as they wish, or until places are found for them. The building was clean and well kept. The books were properly written up.

I made an inspection of this Home on the 22nd September. There were in residence on that day ten adult females, and seventeen children under five years of age.

The confinement cases now all takes place in the Home, one of the city doctors being in attendance. Fifteen confinements were recorded since last October, and five deaths—one adult and four infants.

The building has undergone considerable improvement since my last visit and I found it in good order throughout.

INFANTS' HOME, OTTAWA.

The following summaries show the operations of the Home during the official year:

The revenue of the Home during the year, including the Government grant of \$155.70 was \$1,689.31, and the expenditure was \$1,684.85.

The collective stay of the infants was 9,845 days, entitling the Institution to receive the sum of \$196.90 as Government aid for 1897.

l visited this Charity on the 29th January, when there were eighteen infants being cared for. These come from the House of Mercy Lying-in Hospital. The number received since the first of the year was fifty-six, and twenty-eight have died.

A doctor attends the Institution regularly, and in some cases the mother, or her friends, take the child away.

The House was in good order. It is well heated, and has good drainage and ventilation. Coal oil is used for lighting.

I inspected this Home on the 21st September, when there were twenty-six infants being cared for. The admissions since the 1st October, 1896, were two hundred and twelve, most of them coming from the Lying-in Hospital. During the same period there were one hundred and nine deaths of children from one day to two months of age.

The inmates are adopted from time to time by private families.

The revenue of the Home was \$269.20, and the expenditures were \$372.30. The collective stay of the children was equal to 4,835 days, entitling the Institution to receive the sum of \$96.70 as Government aid for 1897.

I requested Mr. Aikens to inspect this Institution. A copy of his report is annexed.

I inspected this Institution on June 30th. Its population then consisted of fourteen—three adult males, two adult females and nine children, all of whom I saw. There is room for three times that number. One old man, and a retired German clergyman and his wife, have taken up their permanent abode there, paying for it, \$250 and \$800 respectively. The Institution is distinct from anything else in the Province, inasmuch as it is conducted upon a sort of Communistic principle, quite the rule throughout Central Europe, but somewhat different from the Anglo-Saxon idea. Even in its transplanted state it shows the German habit of thrift and frugality. The three acres of land afford an opportunity for work to the inmates. I inspected the building from attic to cellar It is roomy, kept fairly well ventilated, has a force pump and inside closet, and was clean without being particularly neat.

I also looked over the daily record and other books and noted that their keeping had been reduced to a system.

SALVATION ARMY REFUGE HOME, HAMILTON.

The following summaries show the operations of this asylum during the year:

Movements of Inmates.

The revenue of the asylum during the year amounted to \$775.64, and the expenditure to \$757.11.

The collective stay of the inmates was 4,347 days, entitling the asylum to receive a sum of \$86.94 as Government aid for 1897.

Inspections.

SIR,—In response to the attached petition for Government Aid, I made an inspection of the Salvation Army Rescue Home, Hamilton, on the 6th February.

This Home is situated in Wentworth street, No. 119. The building is of brick, two storeys high, with basement and attic, no out-buildings. A rental of \$18.00 per month is paid.

There is accommodation for seventeen or eighteen adult females and five or six children, and at the time of my visit there were sixteen adult females and five small children in residence.

The building is well lighted and ventilated and has good drainage; it is heated by a hot air furnace. I found the rooms, beds, bedding, etc., clean and in neat order; the wash-rooms, bath-rooms and water-closets were also in good order.

The inmates remain in the Home until they are able to find situations, and the children when old enough are transferred to the care of the Children's Aid Society, or are placed in Boys' Home and Girls' Home, or adopted by private

families.

Any female (married or single) who is willing to assist in the work is admitted to the Home, whether able to pay anything towards her maintenance or not.

The inmates are expected to do housework, sewing, etc., until they are reformed, when homes are found for them in the city or with farmers in the

country.

They go to the Maternity Hospital for confinement and return to the Home ten or twelve days thereafter. A book of record is kept in which is entered a history of each case so far as it is possible to obtain it.

The Home is well managed; there are three officers of the Salvation Army in charge.

The City of Hamilton makes a grant of four cents per day per inmate, and the County of Wentworth makes a grant of \$50 a year.

I have the honor to recommend that an Order in Council be passed giving authority for the Rescue Home, Hamilton, to be taken as named in Schedule C of the Charity Aid Act, and to receive aid in accordance therewith from the 1st January, 1897.

I have the honor to be, Sir, Your obedient Servant,

T. F. CHAMBERLAIN,

Inspector.

The Honorable,

THE PROVINCIAL SECRETARY.

COPY OF AN ORDER-IN-COUNCIL APPROVED BY COLONEL SIR CASIMIR STANISLAUS GZOWSKI, K.C.M.G., ADMINISTRATOR OF THE GOVERNMENT OF THE PROVINCE OF ONTARIO, THE 12TH DAY OF FEBRUARY, A.D. 1897.

Upon consideration of the report of Mr. Inspector Chamberlain, dated 8th February, 1897, and upon the recommendation of the Honorable the Provincial Secretary, the Committee of Council advise that, subject to the ratification of this Order by the Legislative Assembly, the Rescue Home, Hamilton, be hereafter taken as named in Schedule C of the Charity Aid Act and receive aid in accordance therewith from the 1st day of January, 1897.

Certified,

J. Lonsdale Capreol.

Asst. Clerk, Executive Council.

There were nine young women and one infant in the Home when I inspected it on the 18th November. They are kept in the Home until places are found for them.

All the rooms were in good order. Coal oil lamps are used, and the building is heated by a hot air furnace. The books were properly kept.

MAGDALEN ASYLUMS.

There has been no increase in these Homes during the year. In my reports of inspection will be found particulars regarding each institution, and the tables show the length of stay of the inmates, amount of receipts and expenditures, etc.

The revenue of the Asylum, exclusive of the Government grant of \$191.00, amounted to \$2,564.44, and the expenditures to \$2,888.79.

The collective stay of the inmates was 10,352 days, entitling the Institution to receive the sum of \$207.04 as Government aid for 1897.

This Institution was inspected by me on the 27th April, when there were twenty-eight female inmates. They are employed in doing laundry work, knitting and sewing.

They remain in the Refuge as long as they wish, being provided with clothing and food, but no wages are paid. When suitable homes are found for them they go out to service.

The rooms, beds, bedding, laundry, kitchen, etc., were in good order.

GOOD SHEPHERD FEMALE REFUGE, TORONTO.

The following summaries show the operations of this Refuge during the year:

Movements of Inmates.

In residence 1st October, 1896	81 73 ——	154
Discharged	67 1 86 ——	154
. Religious Denominations.		
Protestant	11 143	154
Nationalities.

City of Toronto	145	15 ‡

The income of this Charity, exclusive of the Government grant of \$613.54, was \$5,113.52, and the expenditure \$9.725.96.

The collective stay of the inmates was 30,144 days, entitling the Institution to receive the sum of \$602.88, as Government aid for 1897.

I inspected this Refuge on the 28th April and found eighty-six females in residence, fourteen of whom were under twelve years of age. The children attend school and the others assist in doing laundry work, sewing, etc.

The dining room, kitchen, laundry, school room and all other departments were in good condition. The Institution is well managed and the books properly kept.

I instructed Mr. Nicholson to make a second inspection of this Institution. A copy of his report is annexed:

I made an inspection of the Refuge on the 12th November. There were eighty-three inmates on that day, namely, seventy-two adults and eleven children. They comprise three classes—old ladies, "Magdalens" and children from four years of age upwards.

The dormitories, beds and bedding were clean and in neat order. The laundry, which is a source of considerable revenue, is much in need of a new building, the one now occupied being very old and dilapidated, and I was informed that a new structure is in contemplation for next year. The general health of the inmates was good.
